Sheet 2 of 6
Part No. 0102010
Date: 30 NOV 64
TDRR 16466
Revision A

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) provides instructions for modifying the Remote Optics Controller, P/N 1900491-011. The modification permits the Remote Optics Controller to be used with a greater degree of positional freedom and still maintain its illumination control capability. The modification consists of deleting an adapter cable and two jumper wires.

II. AUTHORITY

This retrofit is authorized by NECP A32.

III. UNITS AFFECTED

Name	P/N	Retrofit S/N's	New P/N or Mod Mark
Remote Optics Controller Assy	1900491-011	ACSK 6, 7, & 8	REV T

IV. PRIORITY CHANGES

None.

V. RELATED CHANGES

RIB's 0102006, 0102008, 0102009, 0102011, and 0102013.

VI. MATERIAL REQUIRED

A. One (1) Retrofit Kit, P/N 8102005, consisting of the following:

Sheet 3 of 6
Part No. 0102010
Date: 30 NOV 64
TDRR 16466
Revision B

VI. MATERIAL REQUIRED (Continued)

Item	Qty	Nomenclature	P/N
1	1	Retrofit Instruction Bulletin (RIB)	0102010

B. Special tools or equipment required, but nut supplied, in kit:

Item	Qty	Nomenclature	P/N
1	1	Removal Tool (Hughes)	TWO-22 RT-000 or equivalent
2	AR	Lacing Tape, Black	MIL-T-713

VII. MODIFICATION INSTRUCTIONS

A. General

1. Read and thoroughly understand the RIB before attempting the retrofit.

2. Assure that the latest revision of the RIB is used to effect the modification (verify by checking with SIDL).

3. All workmanship shall meet the standards defined in workmanship standard AC-STD-1, dated March 1964.

B. Procedural

1. Open the case cover of the Remote Optics Controller. Remove adapter cable "C", P/N 1900652, from the cable brackets on the underside of the cover. Discard the removed cable.

Sheet 4 of 6
Part No. 0102010
Date: 30 NOV 64
TDRR 16466
Revision A

VII. MODIFICATION INSTRUCTIONS (Continued)

2. Loosen the four (4) thumb screws, P/N 1015830-2, on the handles of the front panel, P/N 1900656.

3. Stand the Remote Optics Controller on end and slowly pull the front panel away from the case, P/N 1900680. When the clearance between the front panel and the case is sufficient to permit disconnection of connector plug P2, P/N MS24056-2, from connector receptacle J2, P/N MS24055-2, rest the panel on end.

4. Disconnect P2 from J2 and slowly pull the front panel from the case until the leads between the front panel and connector J1 P/N 1010411-1 on the case become taut.

   CAUTION: Care should be taken to assure that none of the leads are accidentally broken or pulled loose.

5. Determine if the clearance between the panel and the case is sufficient to enable cutting of the spot-tie(s) nearest connector J1 to permit the removal of two (2) jumper wires from J1. One jumper wire is from pin 61 to pin 63, and the other is from pin 62 to pin 64. If the clearance is sufficient, go to Step 6. If it is not, unfasten J1 from the case by removing two (2) each pan head screws, P/N MS35216-014, and self-locking nuts, P/N 1016151-004. Set aside the removed hardware and separate the panel with attached connector from the case.

VII. MODIFICATION INSTRUCTION (Continued)

6. Cut the harness spot-tie(s) nearest connector J1 and extract pins 61, 62, 63, and 64 from the connector with a Hughes removal tool, P/N TWO-22 RT-000. Discard the two loose jumper wires.

7. Using black lacing tape, P/N MIL-T-713, spot-tie the harness near J1, at the location(s) of the original spot-tie(s). If J1 was not unfastened from the case, proceed to Step 8. If J1 had been unfastened, refasten it with the hardware removed in Step 5.

8. Connect P2 and J2 and carefully position the front panel against the case. Tighten the four (4) thumb screws on the handles to fasten the panel to the case.

9. Locate and remove the existing revision letter and schematic drawing number from the Remote Optics Controller. Reidentify the unit with, "Rev. T" and "Schem. 1900651". Use Rubber Stamp Ink 28 Special or equivalent. Mark with characters .12 inches high.

C. Retest

1. Visually inspect connector J1 and assure that pins 61, 62, 63, and 64 have been removed.

VIII. MODIFICATION DESIGNATION

The Remote Optics Controller, P/N 1900491-011, will be marked, "Rev. T" and "Schem. 1900651".

IX. DISPOSITION OF PARTS REMOVED

Scrap.

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) provides Block II modification instructions for the Power Supply and Load Panel Assembly P/N 1902375-011, located in the Optics - Inertial Analyzer.

II. AUTHORITY

This retrofit is authorized by Block II/LEM contract NAS9-497.

III. UNITS AFFECTED

Name	Old P/N	New P/N Or Mod Mark
Power Supply and Load Panel Assembly	1902375-011	2900033-011
2 Volt, 3200 CPS Power Supply Assembly	1900081-011	2900162-011

IV. PRIORITY CHANGES

Not applicable.

V. RELATED CHANGES

RIB 0102043

VI. MATERIALS REQUIRED

A. Materials required for Power Supply and Load Panel Assembly.

1. One retrofit kit, part number 8102117, consisting of the following:

Qty	Part Number	Nomenclature
2	1006927	Indicator, Total Time
1	8102125	Retrofit Kit for Power Supply Assembly, 2V, 3200 CPS
1	F02A250V1/2A (1897099-007)	Fuse (MIL-F-15160/02)
1	1015873-008	Fuseholder
1	RE65G2490 (1896981-327)	Resistor (MIL-R-18546/1)
3	1015802-004	Relay, Armature
8	1016151-006	Nut, self locking
2	MS35216-5	Screw, pan head
8	MS35216-28	Screw, pan head
8	AN960C6 (1897006-026)	Washer, flat
1	2900146	Panel, front
4	1006783-101	Screw, button head, hex socket
4	MS35216-1	Screw, pan head, cross recess
2	2900243	Spacer, bar
21	1010490-198	Insulation sleeving, electrical, heat shrink (white)
2	1015818-416	Contact, socket
2	1015818-420	Contact, socket

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Nomenclature
4	1015902-49	Terminal lug, crimp style
34	1015864-167	Insulation sleeving, electrical, clear
12	1015864-137	Insulation sleeving, electrical, clear
17	1015864-109	Insulation sleeving, electrical, clear
3	1016006-003	Splice reducer, crimp style
1	0102036	Retrofit Information Bulletin
1	1004260-110	Nameplate (APOLLO GSE)
6	1016151-004	Nut, self locking
1	2900372	[redacted] wire list
3	1010490-194	Insulation sleeving, electrical, heat shrink
22	MS3192-20A	Contact, pin, crimp type
1	1010490-286	Insulation sleeving, electrical, heat shrink

2. Materials and special tools required but not supplied in kit:

Qty	Description	Part Number
AR	Solder (QQ-S-571)	SN60WS
AR	Flux (type A or W)	MIL-F-14256
AR	Solder (QQ-S-571)	SN60WRAP
AR	Lacing tape, type P, class 2, black	MIL-T-713
1	No. 30 drill	Any hi-speed type

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Description	Part Number
1	No. 50 drill	Any hi-speed type
1	2-56-NC-2 tap	Henry Hanson (ACE)
AR	Clear flat lacquer	N/A
AR	Lacquer thinner	N/A
AR	Black marking ink	N/A
1	Heat gun (300°F)	Master Appliance G7673A
1	Stamp set (1/16" size)	Greenfield
1	Extractor tool	Bendix 11-7880-20
1	Insertion tool	Bendix 11-8107-20
1	Crimping tool	Buchanan MS3191-1
1	Positioner	Buchanan MS3191-20A
1	Extractor tool	Winchester 107-1001
1	Insertion tool	Winchester 107-1015
1	Crimping tool	Burndy MR8-33T
1	Crimping tool	Burndy Y10MRF-4 (single die groove)
1	Procurement specification	2900033-011
1	Torque wrench (0 to 50 inch lbs, 3/8 inch sq. dr.)	P.A.Sturtevant F50-1
1	Socket wrench adapter (1/4 inch sq. dr. female X 3/8 inch sq. dr. male)	Snap-On TA-3
1	1/8 inch hex head cap screw driver (1/4 inch sq. drive)	Snap-On TMA-4

VI. MATERIALS REQUIRED (CONTINUED)

B. Materials required for 2 Volt, 3200 CPS Power Supply Assembly.

1. One retrofit kit, part number 8102125, consisting of the following:

Qty	Part Number	Nomenclature
1	1897244	Transformer, power
1	1897236	Transformer, power
2	1016151-004	Nut, self locking
2	MS35216-24	Screw, pan head
1	2900242	Bracket, transformer
1	1016006-002	Splice reducer
1	1010490-258	Insulation sleeving, electrical, heat shrink
2	1010490-198	Insulation sleeving, electrical, heat shrink
1	1015817-424	Contact, pin
1	1015817-420	Contact, pin
1	1016023-001	Grommet, rubber
1	MS17122-11	Terminal, stud
22	1015864-109	Insulation sleeving, electrical, (clear)
1	2900438	Wire list
1	1015864-613	Insulation sleeving, electrical
1	0102036	Retrofit Information Bulletin

VI. MATERIALS REQUIRED (CONTINUED)

2. Materials and special tools required but not supplied in kit:

Qty	Description	Part Number
AR	Solder (QQ-S-571)	SN60
AR	Flux	MIL-F-14256
AR	Clear flat lacquer	N/A
AR	Lacquer thinner	N/A
1	Crimping tool	Burndy Y10-MRF-4 (single die groove)
1	Heat gun (300°F)	Master Appliance G7673A
AR	Black marking ink	N/A
AR	Lacing tape	MIL-T-713
1	21/64 drill	Any hi-speed type
1	No. 21 drill	Any hi-speed type
1	No. 32 drill	Any hi-speed type
1	Insertion tool	Winchester 107-1015
1	Procurement specification	PS 2900162
1	Swaging anvil	Cambridge Thermionic Corp. PSA 6401
1	45° flare swaging punch	Cambridge Thermionic Corp. PSP-PC-6663
1	Crimping tool	Buchanan MS3191-1
1	Positioner	Buchanan MS3191-20B

VII. PROCEDURE

A. GENERAL INSTRUCTIONS

1. Read and understand complete RIB prior to attempting this modification. No deviation should be made from the procedure outlined herein.

2. All workmanship shall meet standards defined in Workmanship Standard AC-STD-1. 15 January 1965

3. The suffix letter of a conductor identification number indicates conductor shielding, color or marking. The code is as follows:

A - "From" end shield
B - "To" end shield
K - White with letter K, or white with black tracer
L - White with letter L, or white with blue tracer
R - White with letter R, or white with red tracer
W - White with letter W, or white
Y - White with letter Y, or white with yellow tracer

4. Ink Markings.

a. Markings to be removed should be removed using lacquer thinner.

VII. PROCEDURE (CONTINUED)

b. New marking characters should be 0.90 inch in height and colored black unless otherwise specified.

c. New markings will be covered with a coat of clear, flat lacquer after ink has dried.

5. Use backing plate when drilling holes and remove burrs from newly drilled holes.

6. After wiring deletions, changes and additions in wiring harness have been completed, harness will be laced as necessary with lacing tape.

7. Any existing conductors which are disconnected and then later reconnected shall be cut back, and restripped and tinned as necessary. If conductor length thus becomes too short, it will have to be replaced with an identical size, type and marked conductor.

8. Heat sinks will be used when soldering or unsoldering connections on or near semiconductor devices.

B. DETAIL INSTRUCTIONS FOR MODIFICATION OF POWER SUPPLY AND LOAD PANEL ASSEMBLY

1. Remove Power Supply and Load Panel Assembly from Optics - Inertial Analyzer.

VII. PROCEDURE (CONTINUED)

2. Remove 2 Volt, 3200 CPS Power Supply Assembly, part number 1900081-011, from Power Supply and Load Panel Assembly as follows:

   a. Disconnect connector P1 from connector J5.

   b. Remove six pan head screws which secure 2 volt, 3200 CPS Power Supply Assembly to Power Supply and Load Panel Assembly. Retain hardware for later reassembly.

   c. Remove 2 volt, 3200 CPS Power Supply Assembly from Power Supply and Load Panel Assembly.

3. Modify 2 volt, 3200 CPS Power Supply Assembly in accordance with paragraph C in this section.

4. Disconnect conductors listed in table 1 from front panel. Discard associated sleevings when disconnecting conductors.

5. Remove front panel from Power Supply and Load Panel Assembly by removing four button head screws and four self-locking nuts. Retain four self-locking nuts for later reassembly.

6. Obtain new front panel, part number 2900146, from kit.

VII. PROCEDURE (CONTINUED)

Table 1. Conductors Disconnected From Front Panel

Conductor Number	Connection Point
A110R	M1-1
A110L	M1-2
A109R	M2-1
A109L	M2-2
A107L	M3-1
A107R	M3-2
A108R	M4-1
A108L	M4-2

A93 and A90	XF9-1
A91R	XF9-2
A93	XF10-1
A96R	XF10-2

VII. PROCEDURE (CONTINUED)

7. Remove ISS total time indicator from old front panel and mount on new front panel in position marked ISS OPERATE utilizing same attaching screws, washers and self-locking nuts.

8. Remove WHEEL total time indicator from old front panel and mount on new front panel in position marked WHEEL, utilizing same attaching screws, washers and self-locking nuts.

9. Remove AGC total time indicator from old front panel and mount on new front panel in position marked AGC/LGC utilizing same attaching screws, washers and self-locking nuts.

10. Remove OPTICS total time indicator from old front panel and mount on new front panel in position marked OPTICS utilizing same attaching screws, washers and self-locking nuts.

11. Obtain one total time indicator, part number 1006927, four pan head screws, part number MS35216-28, four flat washers, part number AN960C6, and four self-locking nuts, part number 1016151-006, from kit and mount in position marked OIA ON on new front panel.

VII. PROCEDURE (CONTINUED)

12. Obtain one total time indicator, part number 1006927, four pan head screws, part number MS35216-28, four flat washers, part number AN960C6, and four self-locking nuts, part number 1016151-006, from kit and mount in position marked ISS STANDBY on new front panel.

13. Remove BLOWER A8-B1 fuseholder from old front panel and mount on new front panel in position marked BLOWER A8-B1.

14. Remove BLOWER A8-B2 fuseholder from old front panel and mount on new front panel in position marked BLOWER A8-B2.

15. Remove 115V-400 CPS LAMP fuseholder from old front panel and mount on new front panel in position marked 115V-400 CPS LAMP.

16. Remove 115V-400 CPS 0Ø fuseholder from old front panel and mount on new front panel in position marked 115V-400 CPS 0Ø.

17. Remove 115V-400 CPS πØ fuseholder from old front panel and mount on new front panel in position marked 115V-400 CPS πØ.

18. Remove 2V-3200 CPS fuseholder from old front panel and mount on new front panel in position marked 2V 3200 CPS.

VII. PROCEDURE (CONTINUED)

19. Remove 28VDC fuseholder from old front panel and mount on new front panel in position marked 27VDC RLP.

20. Remove 115V-60 CPS PILOT POWER fuseholder from old front panel and mount on new front panel in position marked 115V-60 CPS PILOT POWER.

21. Obtain fuseholder, part number 1015873-008, from kit and install on new front panel in position marked 28V 3200 CPS.

22. Obtain 0.5 amp fuse, part number F02A250V1/2A, from kit and install in fuseholder mounted on new front panel in preceding step.

23. Remove BLOWER A23-B1 fuseholder from old front panel and mount on new front panel in position marked BLOWER A23-B1.

24. Remove BLOWER A23-B2 fuseholder from old front panel and mount on new front panel in position marked BLOWER A23-B2.

25. Remove SPARE 6 AMP fuseholder from old front panel and mount on new front panel in position marked SPARE 6 AMP.

VII. PROCEDURE (CONTINUED)

26. Remove one SPARE 3 AMP fuseholder from old front panel and mount on new front panel in position marked SPARE 3 AMP.

27. Remove SPARE .5 AMP fuseholder from old front panel and mount on new front panel in position marked SPARE 0.5 AMP.

28. Remove SPARE .25 AMP fuseholder from old front panel and mount on new front panel in position marked SPARE 0.25 AMP.

29. Remove two handles from old front panel by removing two flat head screws which secure each handle to front panel.

30. Mount two handles, removed in preceding step, on new front panel using same securing screws.

31. Dispose of old front panel as directed in section IX.

32. Obtain two spacer bars, part number 2900243, and four hex socket button head screws, part number 1006783-101, from kit.

VII. PROCEDURE (CONTINUED)

33. Place two spacer bars between front panel and chassis of Power Supply and Load Panel Assembly and secure parts together using four hex socket button head screws (obtained from kit) and four self-locking nuts retained in step 5. See figure 1 for reference. Screws will be torqued to 33 to 36.2 inch pounds using P.A. Sturtevant F50-1 torque wrench with Snap-On TA-3 socket wrench adapter and Snap-On TMA-4 hex head screwdriver.

34. Remove slide assembly on left side (as viewed from front) of Power Supply and Load Panel Assembly.

35. Reinstall slide assembly on left side one position forward as shown in figure 2 using original securing screws. Only three of original four screws will be used. Screws shall be torqued to 33 to 36.2 inch pounds using same torquing tools as used in step 33.

36. Relocate slide assembly on right side of Power Supply and Load Panel Assembly in same manner as left side assembly. Torque securing screws to 33 to 36.2 inch pounds.

37. Remove conductors listed in table 2 and discard associated sleevings. Conductors removed from E points will be cut as close as possible to splice reducer.

VII. PROCEDURE (CONTINUED)

38. Relocate four conductors on relay K9 as indicated in table 3. After each conductor is unsoldered, conductor shall be trimmed, restripped 0.25 inch and tinned before being soldered to new pin. Discard old insulation sleevings and obtain new insulation sleevings from kit for reinstallation.

Table 2. Conductors Removed From Wiring Harness A

VII. PROCEDURE (CONTINUED)

39. Remove reactors L1 through L6 from chassis by removing four self-locking nuts from each reactor. Dispose of reactors and self-locking nuts as directed in section IX.

40. Remove L1, L2, L3, L4, L5, and L6 markings from chassis.

41. Remove resistors R7 through R12 from terminal board. Dispose of resistors as directed in section IX.

42. Remove R7, R8, R9, R10, R11, R12, and associated pin number (1 and 2) markings from terminal board.

43. Remove and retain four screws and associated hardware which secures terminal board to chassis.

44. Remove part number "1900410" marking on bottom side of terminal board and stamp new part number "2900275" in same location. Characters should be 0.09 inch in height and colored black.

45. Secure terminal board to chassis using original hardware used to secure terminal board.

CAUTION: Use extreme care when performing the next step to avoid damaging wiring and other nearby components.

VII. PROCEDURE (CONTINUED)

46. Drill six mounting holes in chassis for new relays K8, K10, and K11 using number 30 size drill and in locations as shown in figure 3.

47. Stamp designations K8, K10, K11, R15, and 1 and 2 pin designations for R15 in locations as shown in figure 3. Characters should be 0.12 inch in height and colored black.

48. Obtain resistor, part number RE65G2490, and two pan head screws, part number MS35216-5, from kit and mount on chassis as shown in figure 3.

49. Obtain three relays, part number 1015802-004, and six self-locking nuts, part number 1016151-004, from kit.

50. Mount and secure three new relays to chassis in locations marked K8, K10, and K11 with self-locking nuts. Relays shall be orientated as shown in figure 4.

51. Remove splice reducer at E2 by cutting conductors A118, A48A, and A137A as close as possible to body of splice reducer. Discard splice reducer and associated insulation heat shrink sleeve.

52. Strip insulation on conductors A118, A48A, and A137A 0.25 inch at E2.

VII. PROCEDURE (CONTINUED)

53. Remove splice reducer at E4 by cutting conductors A120, A87A, A88A, A155B, A156B, A157B, and A160A as close as possible to body of splice reducer. Discard splice reducer and associated insulation heat shrink sleeve.

54. Strip insulation on conductors A120, A87A, A88A, A155B, A156B, A157B, and A160A 0.25 inch at E4.

55. Remove splice reducer at E3 by cutting conductors A119, A63A, A91B, A96B, A97B, and A98B as close as possible to body of splice reducer. Discard splice reducer and associated insulation heat shrink sleeve.

56. Strip insulation on conductors A119, A63A, A91B, A96B, A97B, and A98B 0.25 inch at E3.

57. Reconnect conductors listed in table 4 to front panel. Restrip all conductors 0.25 inch and tin before reconnecting.

Table 4. Conductors Reconnected to Front Panel

Conductor Number	Connect To:	Accessory Item P/N	Remarks
A95	XF1-1		Use "to" end of A95.
A97R	XF1-2		
A94 and A95	XF2-1		Use "From" end of A95.

VII. PROCEDURE (CONTINUED)

A108L	M4-2	↓	

VII. PROCEDURE (CONTINUED)

58. Obtain wire list and accessory items from kit and install as indicated in table 5. Cut excess length from conductors as necessary and route conductors along existing branches of wiring harness A. Do not connect conductors at E2, E3, and E4 at this time.

VII. PROCEDURE (CONTINUED)

VII. PROCEDURE (CONTINUED)

Table 5. New Conductors Added to Wiring Harness A (Continued)

NOTE A: 1) Remove pin from connector with Bendix 11-7880-20 extractor tool.
2) Install pin on conductor with Buchanan MS3191-1 crimp tool with Buchanan MS3191-20A positioner.
3) Install pin in connector with Bendix 11-8107-20 inserter.

NOTE B: One more conductor to be connected to this point.

NOTE C: Crimp terminal lug using Burndy MR8-33T crimp tool.

NOTE D: 1) Remove pin from connector with Winchester 107-1001 extractor.
2) Install pin on conductor with Buchanan MS3191-1 crimp tool and Buchanan MS3191-20A positioner.
3) Install pin in connector with Winchester 107-1015 insertion tool.

59. Remove crimped contact pins b, c, d, e, f, g, h, i, j, k, m, n, and HH in connector J1 with Bendix 11-7880-020 extractor tool.

Sheet 32 of 54
Part No. 0102036
Date: 9 AUG 65
TDRR 23403
Revision C

VII. PROCEDURE (CONTINUED)

60. Obtain thirteen contact pins, part number MS3192-20A from kit and install in void pin holes of connector J1 with Bendix 11-8107-20 inserter.

61. Obtain one splice reducer, part number 1016006-003, and one insulation heat shrink sleeve, part number 1010490-194, from kit.

62. Mark "E3" on insulation heat shrink sleeve.

63. At E3, insert conductors A63A, A91B, A96B, A97B, A98B, A173A, A174A, A178A, A179A, A184A, and A186A in large end of splice reducer and crimp with Burndy Y10MRF-4, single die groove, crimping tool.

64. Slip insulation heat shrink sleeve over conductor A119 at E3 and crimp small end of splice reducer on conductor A119 with Burndy Y10MRF-4, single die groove, crimping tool.

65. Position insulation heat shrink sleeve over E3 crimped splice reducer and heat shrink in place.

66. Obtain one splice reducer, part number 1016006-003, and one insulation heat shrink sleeve, part number 1010490-194, from kit.

VII. PROCEDURE (CONTINUED)

67. At E4, insert conductors A87A, A88A, A155B, A156B, A157B, A160A, A194A, A195A, A196A, A197A, A198A, and A199A in large end of splice reducer and crimp with Burndy Y10MRF-4, single die groove, crimping tool.

68. Slip insulation heat shrink sleeve over conductor A120 at E4 and crimp small end of splice reducer on conductor A120 with Burndy Y10MRF-4, single die groove, crimping tool.

69. Position insulation heat shrink sleeve over E4 crimped splice reducer and heat shrink in place.

70. Obtain one splice reducer, part number 1016006-003, and one insulation heat shrink sleeve, part number 1010490-194, from kit.

71. Mark "E2" on insulation heat shrink sleeve.

72. At E2, insert conductors A48A, A137A, A161A, A162A, A163A, A164A, A167A, A168A, A169A, A170A, A171A, and A172A in large end of splice reducer and crimp with Burndy Y10MRF-4, single die groove, crimping tool.

73. Slip insulation heat shrink sleeve over conductor A118 at E2 and crimp small end of splice reducer on conductor A118 with Burndy Y10MRF-4, single die groove, crimping tool.

VII. PROCEDURE (CONTINUED)

74. Position insulation heat shrink sleeve over E2 crimped splice reducer and heat shrink in place.

75. Obtain identification band, part number 1016128-001 from kit wire list and mark part number "2900373" on it using nylon marking ink.

76. Remove identification band from wire harness A and replace it with new identification band marked in preceding step. Secure new identification band to harness with lacing tape.

77. Install 2/28.5 volt, 3200 CPS Power Supply Assembly, part number 2900162-011, on chassis in same position occupied by unmodified unit utilizing hardware retained in step 2b.

78. Reconnect connector P1 to connector J5.

79. On right side of chassis (as viewed from front), remove schematic drawing number "1902377" and replace with new schematic drawing number marking "2900271". Characters should be 0.12 inch high and black in color.

80. Remove part number "1902376" marked on right side of chassis and replace with part number "2900261".

81. Obtain nameplate, part number 1004260-100, from kit.

VII. PROCEDURE (CONTINUED)

82. Transfer serial number and contract number from old nameplate mounted on chassis to new nameplate. Stamp data on new nameplate using 1/16 inch size characters.

83. Remove old nameplate from chassis and discard nameplate and drive screws.

84. Enlarge four nameplate mounting holes on chassis to 0.070 inch diameter using number 50 size drill.

85. Tap four nameplate mounting holes with 2-56-NC-2B thread.

86. Secure new nameplate to chassis with four pan head screws, part number MS35216-1, supplied in kit.

87. Perform checkout as required in procurement specification PS2900033-011.

C. DETAIL INSTRUCTIONS FOR MODIFICATION OF 2 VOLT, 3200 CPS POWER SUPPLY ASSEMBLY

1. Remove terminal board assembly from electronics components bracket (main chassis), part number 1900401, as follows:

    a. Unsolder all wires connected to terminals 1 through 6 on transformer T4.

VII. PROCEDURE (CONTINUED)

b. Unsolder all wires connected to terminals 1 through 5 on transformer T2 and discard insulation sleevings.

c. Remove all transformer T3 wires which are connected to terminal board terminals 76, 77, 80, and 81.

d. Unsolder all wires connected to transformer T1, diode CR1, capacitor C9, inductor L2, and transistors Q7 and Q8 and discard insulation sleevings.

e. Remove cable clamp securing harness to main chassis near inductor L2. Retain hardware for later reassembly.

f. Remove four screws, washers and spacers which secure terminal board to main chassis and remove terminal board from main chassis. Retain hardware for later reassembly.

CAUTION: Care must be exercised in next step to avoid damaging the terminal board.

2. Remove transformer T3 from terminal board by mechanical means. Use sharp pointed instrument to loosen bonding material.

VII. PROCEDURE (CONTINUED)

3. Drill 0.328 inch diameter hole through terminal board in location shown in figure 5 using 21/64 inch drill.

4. Drill 0.116 (+0.003) (-0.002) inch diameter hole through terminal board using number 32 size drill in location shown in figure 5.

5. Install grommet, part number 1016023-001 (supplied in kit), in hole drilled in step 3.

6. Remove part number "1900400" stamped on terminal board and stamp new part number "2900262" in same location.

7. Remove part number "1900402-011" stamped on terminal board and stamp new part number "2900161-011" in same location.

8. Stamp number "97" on terminal board in position as shown in figure 5.

9. Install terminal stud, part number MS17122-11 (supplied in kit), in hole drilled in step 4 using Cambridge Thermionic Corporation swaging anvil, PSA 6401, and 45° flare swaging punch, PSP-PC6663. Terminal stud shall protrude from same side of terminal board as existing terminal studs.

VII. PROCEDURE (CONTINUED)

10. Drill two 0.159 (+0.004) (-0.003) inch diameter holes through main chassis in locations shown in figure 6 using number 21 size drill.

11. Remove two screws and washers which secure transformer T2 to main chassis and remove transformer T2 from main chassis. Retain screws and washers for mounting new transformer T2.

12. Obtain new transformer T2, part number 1897236 from kit and install in same position occupied by former transformer T2. Note correct orientation of transformer as indicated by colored dot in figure 6. Use two screws and washers retained in step 11 to secure transformer to main chassis.

13. Obtain transformer bracket, part number 2900242 and new transformer T3, part number 1897244 and two self-locking nuts, part number 1016151-004 from kit and secure transformer to bracket using two self-locking nuts. Note correct orientation of transformer in bracket as shown in figure 7.

14. Obtain two pan head screws, part number MS35216-24, from kit and secure T3 transformer bracket to main chassis as shown in figure 8, utilizing two new holes drilled in step 10.

15. Secure terminal board to original position on on main chassis using four screws, washers and spacers retained in step 1f.

VII. PROCEDURE (CONTINUED)

16. Obtain conductors BB5 through BB9 and one insulation sleeve, part number 1015864-613, from kit. Feed five conductors through insulation sleeve. (Insure all "to" ends are together.)

17. Feed one end ("to" ends) of five BB conductors through grommet on terminal board to permit connection to terminal board terminals 76, 77, 80, 81, and 97. ("From" ends will be connected to T3.) See figure 8 for reference.

18. Solder "To" ends of five BB conductors to points listed in table 6 after stripping insulation 0.25 inch and tinning each conductor.

Table 6. New Wire List BB Connections On Terminal Board

Conductor Identification	Connect To Terminal Board Terminal Number:
BB5	97
BB6	80
BB7	81
BB8	76
BB9	77

VII. PROCEDURE (CONTINUED)

19. Solder "From" end of five BB conductors to points listed in table 7 with associated insulation sleeving (furnished in kit) after cutting off excessive conductor length, stripping insulation 0.25 inch and tinning each conductor.

Table 7. New Wire List BB Connections On T3

Conductor Identification	Connect To:	Insulation Sleeve P/N To Be Installed
BB5	T3-1	1015864-109
BB6	T3-2	↓
BB7	T3-3	↓
BB8	T3-4	↓
BB9	T3-5	↓

20. Secure cable clamp (encircling harness A) to original position on main chassis with pan head screw and washer retained in step 1e.

NOTE: All old wiring which has been unsoldered and that will be reconnected in the following steps shall be cut-back and restripped and tinned as required. If wire length thus becomes too short, it will have to be replaced with an identical size, type and marked wire.

VII. PROCEDURE (CONTINUED)

21. Solder following disconnected wire harness A conductors to points listed in table 8 installing insulation sleeving as required. Insulation sleeving is supplied in the kit. Reference figures 7 and 9 for pins numbers on transformers T2 and T3.

Table 8. Wire Harness A Reconnection Points

Conductor Number	Strip Length	Tinned	Connect Loose End To:	Accessory Item P/N

* More than one connection to this point.

22. Install new conductor A61 and A62 (supplied in kit) as follows:

    a. Crimp contact pin, part number 1015817-420, (supplied in kit) on prepared end of conductor A61 (end with ferrules) using Buchanan crimp tool MS3191-1 and positioner MS3191-20B.

VII. PROCEDURE (CONTINUED)

b. Feed prepared end of A61 through marker sleeve P1 and install in pin hole J on connector P1 using Winchester insertion tool 107-1015.

c. Crimp contact pin, part number 1015817-424, (supplied in kit) on prepared end of conductor A62 (end with ferrules) using Buchanan crimp tool MS3191-1 and positioner MS3191-20B.

d. Feed prepared end A62 through marker sleeve P1 and install in pin hole K on connector P1 using Winchester insertion tool 107-1015.

e. Remove heat shrink sleeving from E1 on wire harness A. See figure 10 for location of E1.

f. Remove splice reducer at E1 by cutting conductors as close as possible to splice reducer.

g. Strip insulation on all conductors which were attached to E1 splice reducer, 0.25 inch.

h. Route new conductors A61B and A62B to E1 area and cut off excessive length and strip insulation 0.25 inch. (Length of A61B and A62B should be the same as other E1 conductors.)

i. Obtain splice reducer, part number 1016006-002, from kit and install conductors A13B, A14B, A15B, A16, A61B, and A62B in B end of splice reducer (see figure 10) and crimp into place using Burndy Y10MRF-4 crimp tool.

VII. PROCEDURE (CONTINUED)

j. Obtain heat shrink sleeve, part number 1010490-290, from kit and mark designation "E1" on it.

k. Slide marked heat shrink sleeve over E1 splice reducer and heat shrink in place.

l. Route A61W to pin 4 of transformer T2. If conductor length is excessive, cut to required length and strip jacket length to 1.50 inch, shield length to 1.25 inch, insulation length to 0.25 inch, and tin. Install heat shrink sleeve, part number 1010490-198, over stripped area and heat shrink in place.

m. Solder A61W to pin 4 of transformer T2.

n. Route A62W to terminal board terminal 97. If conductor length is excessive, cut to required length and strip jacket length to 1.50 inch, shield length to 1.25 inch, insulation length to 0.25 inch, and tin. Install heat shrink sleeve, part number 1010490-198, over stripped area and heat shrink in place.

o. Solder A62W to terminal board terminal 97.

p. Spot tie new conductors as necessary to secure them to main trunk of wire harness A.

VII. PROCEDURE (CONTINUED)

23. Obtain identification band, part number 1016128-001, from kit wire list and mark part number "2900437" on it using nylon marking ink.

24. Remove identification band from wire harness A and replace with new identification band marked in preceding step. New identification band should be secured to harness with lacing tape.

25. Remove assembly part number "1900081" from main chassis.

26. Stamp new assembly part number "2900162-011" in same position as occupied by part number 1900081 marking on main chassis.

27. Remove schematic part number "1900341" from main chassis.

28. Stamp new schematic part number "2900253" in same position as occupied by part number 1900341 marking on main chassis.

29. Remove part number "1900401" from main chassis near reactor L2.

30. Stamp new part number "2900263" in same position on main chassis as occupied by part number "1900401" marking or nearby accessible surface.

VII. PROCEDURE (CONTINUED)

31. Perform checkout as required in procurement specification PS2900162.

1901636	Wire List BB	2900436
1900400	Terminal Board (Inseparable Assembly)	2900262
1900402-011	Terminal Board Assembly	2900161-011
1900401	Bracket, Elect. Component (Inseparable Assembly) (Main Chassis)	2900263
1016176	Transformer (T2)	1897236
1015898-10	Transformer (T3)	1897244

* Item nomenclature changes to 2/28.5 Volts, 3200 CPS Power Supply Assembly after modification.

VIII. MODIFICATION DESIGNATION (CONTINUED)

B. Update the Acceptance Data Package by (1) Inserting the Kit Acceptance Data List into the Unit Acceptance Data List, (2) Making the necessary entry into the Equipment Inventory Record, and (3) Recording modification in the Unit History Record (Referencing Retrofit Instruction Bulletin).

C. If a part number change is made as a result of the modification, record performance on the existing Unit History Record sheet and start a new Unit History Record sheet for the changed part number. Retain the old Unit History Record sheet in the Acceptance Data Package.

D. If a part number change is not made as a result of the modification, record performance on the existing Unit History Record sheet.

IX. DISPOSITION OF PARTS REMOVED

Dispose of removed parts as directed by the local customer property officer.

Prepared by D Lind Date 5 May 1966

P.C. Engineering Approval R.B. Date 16/may/66

Design Review Board Approval E A Olsen Date 5 July 66

MIT/IL Approval Date 7-5-66

NASA Approval A. C. METZGER Date______

MIT Reliability______ Date______

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of Battery Power Pack Assembly, P/N 1900011-031. This modification will add the capability of using this assembly with Block II/LEM units, in conjunction with PTC P/N 1900496 as well as PTC P/N 2900060.

II. AUTHORITY

This retrofit is authorized by Block II/LEM contract NAS9-497 (CCA 497-0169).

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Battery Power Pack Assembly	1900011-031	1900011-041

IV. PRIORITY CHANGES

Not applicable.

V. RELATED CHANGES

RIB 0102110 and RIB 0102111.

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102205, consisting of the following items is required to modify a Battery Power Pack Assembly, P/N 1900011-031.

Qty	Part Number	Description
1	0102092	Retrofit Instruction Bulletin
1	1016024-001	Relay, armature
1	1015982-006	Relay, armature
1	1897277-001	Rectifier bridge
1	1897261	Comparator
1	1897337-101	Light indicator assembly
1	1015982-007	Relay, armature
2	F02B32V15AS	Fuse (1897099-133)
1	1004260-510	Nameplate
1	1902621	Lead set
1	1897425	Transformer
1	CL25BJ151UP3	Capacitor (1897081-320)
2	1006783-45	Screw, button head
1	2901438	Component board assembly
4	1015860-001	Spacer
10	1012525-004	Nut
4	1006783-24	Screw, button head
4	AN960C6L	Washer, flat (1897006-036)

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
4	MS35338-79	Washer, lock
6	1006783-22	Screw, button head
2	1010676-1	Terminal, stud, insulated
2	1010618-13	Screw, button head, self locking
7	AN363C1032	Nut, self locking (1016151-010)
4	1016006-002	Splice reducer
2	1016006-003	Splice reducer
4	1010490-258	Sleeving, electrical insulation
2	1010490-256	Sleeving, electrical insulation
1	1015818-616	Contact, socket
27	1015864-135	Sleeving, electrical insulation
25	1015864-137	Sleeving, electrical insulation
11	1015864-133	Sleeving, electrical insulation
9	1015864-138	Sleeving, electrical insulation
2	1016281-161	Contact, socket
1	2901441	Bracket assembly (inseparable)
1	2901442	Plate, instruction
1	1902626	Decal, functional area
1	1010490-200	Sleeving, electrical insulation
1	1016006-001	Splice reducer
1	2901443	Cable W186
1	2901444	Cable W187
1	2901445	Cable W188
1	2901447	Cable W192
32	1006783-19	Screw, button head
4	MS35338-78	Washer, lock
1	1897422-004	Connector, electrical
1	2901199	Sleeve, identification

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	2901475	Sleeve, identification
9	1897370-001	Plug, end seal
1	1016282-16	Grommet, connector strain relief
3	1016073-143	Dummy receptacle
3	1016073-163	Dummy receptacle
1	1016073-103	Dummy receptacle
1	1897424-001	Box mounting receptacle (housing only)
1	1010400-006	Cable clamp
1	MS3181-16C	Cap, protective
1	2901533	Guard, switch
2	MS35200-15	Screw, flat head
3	1016105-004	Clamp
28	1016151-004	Nut, self locking
5	1006783-44	Screw, machine
4	1016151-002	Nut, self locking
1	1006783-23	Screw, machine
1	1006151-006	Nut, self locking
4	1006783-12	Screw, machine

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
1	*ACSP 63L12A	Inductor, 3.33 (±3%) henries 300 ma ac-dc, 1 ohm max.
1	*Dale, type RH25 (Allied Catalog No.660, stock no. 26Z360C)	Resistor, 600 (±1%) ohm, 25 watt

*or equivalent

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Dale, type RH10 (Allied Catalog no. 660, stock no. 26Z352C)	Resistor, 175 (±1%) ohm, 10 watt
AR	N/A	Primer (MIL-P-8585)
AR	N/A	Paint, semi-gloss enamel, light gray (FED-STD-595 color 26440) (TT-E-529, class B)
AR	N/A	Varnish (MIL-V-6894A, unreduced)
1	*Schwaab Stamp & Seal Co., type AAG-0	Rubber stamp, 1/8 inch, thirteen band, alpha-numerical
AR	N/A	Lacquer thinner (MS35626)
AR	N/A	Clear lacquer (MIL-L-73A)
AR	N/A	Black marking ink
AR	N/A	Solder (QQ-S-571, SN60WRAP)
1	*Master Appliance, G7673A	Heat gun (300°F)
1	Buchanan MS3191-A	Crimping tool
1	Buchanan MS3191-16	Positioner
1	Bendix 11-8107-16	Insertion tool
1	Bendix 11-7880-16	Extraction tool
1	Burndy Y10MRF-4	Crimping tool
AR	N/A	Lacing & tying tape (MIL-T-713C, black, type P, class 2)

*or equivalent

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Greenfield Steel Stamp Works	Metal stamp set, 1/8 inch alpha-numerical
AR	N/A	Sealing & retaining compound (MIL-S-22473, grade H & HV)
1	Buchanan MS3191-20	Positioner
AR	MIL-I-631	Filler tape, type F, form T, (black) grade A, class I, 0.62 inch wide, 0.020 inch thick
1	Any hi-speed	7/32 size twist drill
1	Any hi-speed	Number 5 twist drill
1	Any hi-speed	Number 29 twist drill

1	*Ohmite (Allied Catalog no. 660 Stock no. 25Z783C)	Resistor, 5 ohm (±5%), 50 watt
1	*Ohmite (Allied Catalog no. 660, Stock no. 25Z776C)	Resistor, 2 ohm (±5%), 25 watt

*or equivalent

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

3. Where marking is specified, hand marking is acceptable.

4. Use heatsink device when unsoldering or soldering near semi-conductors.

5. Ink markings:

   a. Markings to be removed should be removed using lacquer thinner.

   b. New markings shall be covered with a coat of clear flat lacquer after ink has dried.

6. During this modification, lacing may be cut as required to accomplish necessary work. Spot ties will be added after all conductor rework has been completed.

VII. A. PROCEDURE (CONTINUED)

7. Delete conductors from wiring harness, when instructed, by one of the two following methods:

   a. Method One. (preferred)

      (1) Disconnect conductor from its termination points.

      (2) Clip attached termination hardware and/or exposed tinned tip(s) from all conductor ends and discard.

      (3) Pull conductor out of harness at most convenient point and discard.

   b. Method Two.

      (1) Disconnect conductor from its termination points.

      (2) Clip attached termination hardware and/or exposed tinned tip(s) from all conductor ends and discard.

      (3) Apply a drop of blue glyptal to severed ends of conductor.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Remove cover, P/N 1902541, from battery power pack assembly and modify as directed in paragraph C of Section VII in this RIB.

2. Open access door, P/N 1900471, on battery power pack assembly and disconnect P3 and P4 from their respective mating connectors.

3. Remove battery power pack panel assembly, P/N 1902249-021, from battery power pack assembly and set on work bench.

4. Remove two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure front panel, P/N 1302179, to (right side) chassis support, P/N 1900475. Retain screws and nuts.

5. Remove six machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure front panel to chassis. Retain screws and nuts.

6. Remove three machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure meter bracket, P/N 1900480, to chassis. Retain screws and nuts.

VII. B. PROCEDURE (CONTINUED)

NOTE: Maneuver front panel away from chassis as required to perform following steps. Care must be taken, however, not to put undue strain on wiring and wiring connections.

CAUTION: When cutting holes in front panel and chassis during this modification, take the following necessary measures to;

1. Insure metal chips, filing and etc are not allowed to fall into or on wiring, switches and other components.

2. Insure wiring is pushed aside as necessary to prevent drilling into them.

7. Cut three new holes in front panel, P/N 1902179, as shown in figure 1. Use 1/8 size twist drill to drill two holes near ICTC POWER switch. These two holes shall be countersunk as indicated in figure 1.

8. Touch up bare metal surfaces in new holes with MIL-P-8585 primer and TT-E 529, class B, semi-gloss enamel, light gray (color 26440 of FED-STD-595) paint.

9. Obtain decal, P/N 1902626, from kit and install on front panel as shown in figure 2. Apply a bead of varnish (MIL-V-6894A unreduced), overlapping all edges 1/4 inch minimum on decal.

VII. B. PROCEDURE (CONTINUED)

10. Obtain switch guard, P/N 2901533, from kit and secure to front panel over ICTC POWER switch with two kit supplied flat head screws, P/N MS35200-15. Apply sealing and retaining compound MIL-S-22473, grade HV to threads of screws before installing.

11. Mark "DS10" on backside of front panel in location shown in figure 3. New marking should be 0.125 inch high, color black per ND 1002019.

12. Remove identification number "1902179" stamped on back side of front panel and replace with new identification number "1902629". New identification shall be in accordance with MIL-STD-130 (ES267).

13. Obtain light-indicator assembly, P/N 1897337-101, from kit and mount on front panel as indicated in the following steps while referencing figure 4.

    a. Using fingernail slots on sides, pull lens assembly out approximately 5/8 inch. (Reference figure 4, view A.)

    b. Rotate lens assembly 90 degrees. (Reference figure 4, view B.)

    c. Push lens in to release tension on index keys and then pull complete assembly out and set aside.

VII. B. PROCEDURE (CONTINUED)

d. Unscrew two screws until captive nuts reach the rear of their travel range and remove cover. (One screw and captive nut is shown in figure 4, view C.)

e. Insert indicator assembly through panel cutout from the front of panel. (Reference figure 4, view D.)

f. From rear of panel, slip cover over indicator assembly until it fits snugly against rear of panel. (Reference figure 4, view D.)

g. Tighten two screws (with attached captive nuts) to draw cover up firmly to rear of panel. (Reference figure 4, view C.)

h. Insert lens and lamp assembly (see figure 4, view E) into indicator assembly so lamp board slot is aligned with lamp board index.

i. Rotate lens assembly 90 degrees (see figure 4, view F) and push assembly into indicator assembly.

14. Remove two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure (right side) chassis support, P/N 1900475, to chassis. Retain screws and nuts for later use. Remove (right side) chassis support, P/N 1900475, and dispose of as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

14A. Remove leads A26 and A172 connected to resistor R1.

14B. Remove resistor R1 from chassis. Dispose of resistor and securing screws and nuts as directed in Section IX of this RIB.

14C. Remove marking for R1 (R1 and terminal designations 1 and 2) stamped on chassis, using lacquer thinner.

CAUTION: When performing the following steps, use care to insure CR6, R13 and leads attached to R13 are not damaged. These parts will be removed and installed on a new bracket.

14D. Remove leads A23, A29, A167, and A169 from E9. (E9 is located on electronics components assembly, P/N 1902193.)

14E. Remove lead A166 from E10.

15. Remove lead A171 from E11.

16. Unsolder lead A170 from CR6-C.

17. Remove electronics components assembly, P/N 1902193, from chassis by removing two securing machine screws and self locking nuts. Dispose of removed screws and self locking nuts as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

18. Unsolder (do not cut) green and red leads connected to E10.

19. Unsolder (do not cut) yellow lead connected to CR6-A.

20. Remove resistor R13 from electronics components assembly, P/N 1902193. Retain mounting hardware.

21. Obtain bracket, P/N 2901441, from kit and mount R13 (removed in step 20) on bracket as shown in figure 5. Use original mounting hardware to secure R13 to bracket.

22. Remove diode CR6 from electronics components assembly, P/N 1902193.

23. Utilize original mounting hardware to secure CR6 on new bracket as shown in figure 5.

24. Dispose of electronics components assembly, P/N 1902193, (less R13 and CR6) as directed in Section IX of this RIB.

25. Locate, mark and cut two new holes in chassis as shown in figure 6. Use new bracket, P/N 2901441, as a template for locating two new holes. Do not use bracket for a template when drilling, however. Use 7/32 size twist drill for drilling operation.

VII. B. PROCEDURE (CONTINUED)

26. Touch up bare metal surfaces in two hew holes in chassis with MIL-P-8585 primer.

27. Remove identification number "1902135" and associated revision marking and replace with new identification number "1902631". New marking shall be in accordance with MIL-STD-130.

28. Remove leads listed in table 1 from wiring harness A.

Table 1. Wiring Harness A Lead Deletions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Remarks
A23	CR2-C	E9	Previously removed from E9
A26	K6-6	R1-1	Previously removed from R1
A29	CR1-C	E9	Previously removed from E9
A122	T3-3	XDS3-A	
A137	XDS3-B	XDS5-A	
A138	XDS4-B	XDS5-B	
A166	K6-5	E10	Previously removed from E10
A167	J4-L	E9	Cut off at J4-L, E9 end previously removed
A169	K5-1	E9	Previously removed from E9
A170	XF5-1	CR6-C	Previously removed from CR6
A171	K6-2	E11	Previously removed from E11
A172	TB1-11	R1-2	Previously removed from R1

VII. B. PROCEDURE (CONTINUED)

29. Obtain transformer (T4), P/N 1897425, from kit and secure to new bracket, P/N 2901441, as shown in figure 5, with four kit supplied button head screws, P/N 1006783-22, lock washers, P/N MS35338-79, and flat washers, P/N AN960C6L.

30. Obtain relay (K13), P/N 1016024-001, from kit and secure to new bracket as shown in figure 5, with two kit supplied button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004.

31. Obtain comparator (AR1), P/N 1897261, from kit and secure to new bracket as shown in figure 5, with four kit supplied button head screws, P/N 1006783-19, and lock washers, P/N MS35338-78.

32. Obtain rectifier bridge (CR7), P/N 1897277-001, from kit and secure to new bracket as shown in figure 5.

33. Obtain relay(K14), P/N 1015982-006, from kit and secure to new bracket as shown in figure 5, with two kit supplied self locking nuts, P/N 1012525-004.

34. Obtain relay (K12), P/N 1015982-007, from kit and secure to new bracket as shown in figure 5, with two kit supplied self locking nuts, P/N 1012525-004.

VII. B. PROCEDURE (CONTINUED)

35. Obtain component board assembly (TB3), P/N 2901438, from kit and secure to new bracket as shown in figure 5, with four kit supplied spacers, P/N 1015860-001, self locking nuts, P/N 1012525-004, and button head screws, P/N 1006783-24.

36. Obtain one terminal stud (E15), P/N 1010676-1, from kit and secure to new bracket as shown in figure 5, with kit supplied button head screw, P/N 1010618-13.

37. Obtain one terminal stud (E16), P/N 1010676-1, from kit and secure to new bracket as shown in figure 5, with kit supplied button head screws, P/N 1010618-13.

38. Obtain capacitor (C2), P/N CL25BJ151UP3, from kit and insert in retaining clip as shown in figure 5, such that positive end is nearest E15.

39. Temporarily connect (mechanically) positive lead of C2 to E15 and negative lead to E16.

40. Temporarily connect (mechanically) the free end of yellow lead attached to R13, to TB3-9. Lead should be cut to required length, have insulation stripped 0.30 inch and tinned prior to connecting.

VII. B. PROCEDURE (CONTINUED)

41. Temporarily connect (mechanically) the free end of red lead and green lead attached to R13, to TB3-13. Leads should be cut to required length, have insulation stripped 0.30 inch and tinned prior to installing.

42. Install new wire list AA leads furnished in kit lead set, as indicated in table 2. Accessory items listed in table 2 are also furnished in kit. (Reference figure 7 for terminal identifications.)

A144	K2-D2	**K3-D2	0.30	Yes	1015864-135

*Combine with lead A120 at this point.
**Another lead (A189) will be added to this point later.

VII. B. PROCEDURE (CONTINUED)

45. Remove leads A71, A153, and A160 from E5 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

46. Remove leads A72, A154, and A161 from E6 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

47. Remove leads A73, A155, and A162 from E7 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

48. Remove leads A74, A156, and A163 from E8 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

49. Remove leads A82, A151, and A158 from E3 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

50. Obtain new wiring harness A leads from kit lead set and install as indicated in table 4. (Notes referenced in the remarks column in table 4 can be found at the rear of the table.)

Table 4. Wiring Harness A Lead Additions

Note 1 - Utilize blank contact in connector to make connection at this point.
Note 2 - Connection to this point will be accomplished later.
Note 3 - Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-16 positioner, extraction tool Bendix 11-7880-16, and insertion tool Bendix 11-8107-16 as required.
Note 4 - Do not solder as another lead (A202) will be connected later.

VII. B. PROCEDURE (CONTINUED)

Table 4. Wiring Harness A Lead Additions (continued)

Note 5 - Combine with leads A36, A111, and A168 at this point.
Note 6 - Remove lead A142 from K9-1 before connecting lead A214. Lead A142 will be reconnected to a new point later.

51. Obtain four electrical insulation sleeves, P/N 1010490-258, two electrical insulation sleeves, P/N 1010490-256, and one electrical insulation sleeve, P/N 1010490-200, and mark with the designation indicated in table 5. (Mark by hand with black ink.)

Table 5. Marking for Sleeves

Qty	Part Number	Identification Mark

1	1010490-200	E19
1	1010490-256	E20

VII. B. PROCEDURE (CONTINUED)

52. Route loose ends of leads A142, A194, and A214 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-002, as follows:

   a. Eliminate excessive length and strip insulation 0.30 inch on three leads. (A214 will be crimped in small end of splice reducer.)

   b. Insert leads A142 and A194 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

   c. Obtain sleeve marked E18 (reference step 51) and slide over loose end of lead A214.

   d. Insert lead A214 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

   e. Slide sleeve marked E18 over crimped splice reducer and heat shrink in place.

53. Route loose ends of leads A82, A151, A158, and A179 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-003, as follows:

VII. B. PROCEDURE (CONTINUED)

   a. Eliminate excessive length and strip insulation 0.30 inch on four leads. (A82 and A179 will be crimped in small end of splice reducer.)

   b. Insert leads A151 and A158 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

   c. Obtain sleeve marked E17 (reference step 51) and slide over loose end of leads A82 and A179.

   d. Insert leads A82 and A179 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

   e. Slide sleeve marked E17 over crimped splice reducer and heat shrink in place.

54. Route loose ends of leads A72, A74, and A201 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1006006-002, as follows:

   a. Eliminate excessive length and strip insulation 0.30 inch on three leads.

   b. Insert leads A72, A74, and A201 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

VII. B. PROCEDURE (CONTINUED)

   c. Obtain sleeve marked E14 (reference step 51) and slide over splice reducer and heat shrink in place.

55. Route loose ends of leads A154, A156, A161, A163, and A200 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-002, as follows:

   a. Eliminate excessive length and strip insulation 0.30 inch on five leads. (A200 will be crimped in small end of splice reducer.)

   b. Insert leads A154, A156, A161, and A163 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

   c. Obtain sleeve marked E13 (reference step 51) and slide over loose end of lead A200.

   d. Insert lead A200 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

   e. Slide sleeve marked E13 over crimped splice reducer and heat shrink in place.

VII. B. PROCEDURE (CONTINUED)

56. Route loose ends of leads A71, A73, A153, A155, A160, A162, and A199 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer P/N 1016006-002, as follows:

   a. Eliminate excessive length and strip insulation 0.30 inch on seven leads. (A199, A71, and A73 will be crimped in small end of splice reducer.)

   b. Insert leads A153, A155, A160, and A162 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

   c. Obtain sleeve marked E12 (reference step 51) and slide over loose end of leads A199, A71, and A73.

   d. Insert leads A199, A71, and A73 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

   e. Slide sleeve marked E12 over crimped splice reducer and heat shrink in place.

57. Remove leads A143, A150, and A157 from E2 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

58. Route loose end of lead A215 to former E2 location on wiring harness A. Join leads A143, A150, A157, and A215 in kit supplied splice reducer, P/N 1016006-001, as follows:

    a. Eliminate excessive length from lead A215. (A215 will be crimped in large end of splice reducer.)

    b. Strip insulation on all four leads 0.30 inch.

    c. Insert A150, A157, and A215 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    d. Obtain sleeve marked E19 (reference step 51) and slide over loose end of lead A143.

    e. Insert lead A143 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    f. Slide sleeve marked E19 over crimped splice reducer and heat shrink in place.

59. Route loose ends of leads A207, A208, A209, and A211 to common meeting place on wiring harness A. Join these leads in kit supplied reducer, P/N 1016006-003, as follows:

VII. B. PROCEDURE (CONTINUED)

    a. Eliminate excessive length and strip insulation 0.30 inch on four leads. (A209 will be crimped in small end of splice reducer.)

    b. Insert leads A207, A208, and A211 in large end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    c. Obtain sleeve marked E20 (reference step 51) and slide over loose end of lead A209.

    d. Insert lead A209 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    e. Slide sleeve marked E20 over crimped splice reducer and heat shrink in place.

60. Spot tie wiring harness A as required in accordance with ND 1002032,using black lacing tape.

61. Remove wiring harness A identification tag (marked "1902539") from harness. Dispose of identification tag as directed in Section IX of this RIB.

62. Obtain identification band, P/N 1016128-021, from kit lead set. If band has not been marked with "1902620" identification number, mark it with this identification at this time.

VII. B. PROCEDURE (CONTINUED)

63. Secure new identification band to wiring harness A in same location occupied by old identification tag removed in step 61. Use black lacing tape to secure it in place.

64. Remove identification "ASSY 1902249-021" and replace it with "ASSY 1902630-011". Marking shall be in accordance with MIL-STD-130 (ES267).

65. Secure front panel to chassis with six machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, removed and retained in step 5.

66. Secure front panel to new bracket, P/N 2901441, with two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, supplied in kit.

67. Secure meter bracket, P/N 1900480, to chassis with three machine screws, P/N 1006783, and self locking nut, P/N AN363C1032, removed and retained in step 6.

68. Remove SPARE 15 AMP and BATTERY 15 AMP fuses and replace with two kit supplied fuses, P/N F02B32V15AS.

69. Perform continuity - resistance checks listed in table 6.

VII. B. PROCEDURE (CONTINUED)

Table 6. Continuity - Resistance Checks

FROM	TO	Indication (ohms)	Conditions
J2-K	J6-d	Less than 1	None
J2-K	J6-d	More than 100K	Press S6 (EMERGENCY HEATER POWER PRESS TO TURN OFF)
J2-C	J6-C	More than 100K	None
J2-E	J6-D	More than 100K	None
J2-F	J6-A	More than 100K	None
J2-G	J6-a	More than 100K	None
J2-S	J6-Z	More than 100K	None
J2-R	J2-M	More than 100K	None
J2-U	J2-M	More than 100K	None
J6-G	J6-H	More than 100K	None
J2-A	J2-H	Less than 1	None
J2-B	J2-J	Less than 1	None
J2-H	J6-L	Less than 1	None
J2-P	J6-N	Less than 1	None
J6-L	J6-V	Less than 1	None
J6-W	J6-K	Less than 1	None
J6-c	J6-T	Less than 1	None

70. Recalibrate potentiometer R13 as follows:

    a. Install jumper lead between TB3-3 and TB3-13.

VII. B. PROCEDURE (CONTINUED)

b. Turn R13 to clockwise limit.

c. Connect ohmmeter to pins L and N on connector J4. (Open indicates K5 is de-energized while short indicates K5 is energized.)

d. Apply 38 (±0.2) volts dc (hi) to J3-A and (lo) to J3-J.

e. Turn R13 counterclockwise to point where relay K5 energizes.

f. Decrease applied voltage to 33.5 (±0.5) volts dc.

g. Remove voltage applied to J3. Relay K5 shall de-energize.

h. Reapply 33.5 (±0.5) volts dc to same points on J3. Relay K5 shall not re-energize.

i. Slowly increase voltage at J3. Relay K5 shall energize at 38.0 (±0.2) volts dc. If relay K5 does not energize within 38.0 (±0.2) volt dc range, readjust R13 as necessary and repeat steps f through i until proper R13 setting is obtained. (Turning R13 clockwise increases voltage set point. One turn will result in approximate change of 0.25 volt.)

VII. B. PROCEDURE (CONTINUED)

j. Remove voltage applied to J3.

k. Remove ohmmeter from J4.

l. Remove jumper lead between TB3-3 and TB3-13.

71. Install jumper lead between J2-L and J2-M.

72. Connect panel power cable to 115 volt ac source.

73. Set ICTC POWER switch to ON. 115V LINE POWER and PTC OPERATING indicators shall light. (Inhibit alarm if necessary.)

74. Check to insure that 115 volts ac exists between J2-U and J2-R and between J2-T and J2-M.

75. Continuity shall exist between points listed in table 7.

Table 7. Closed Circuits

FROM	TO
J2-C	J6-C
J2-E	J6-D
J2-F	J6-A
J2-G	J6-a
J2-S	J6-Z

VII. B. PROCEDURE (CONTINUED)

76. Apply 25.0 (±0.2) volts dc (hi) to J6-G and (lo) to J6-H.

77. Check to insure the following conditions exist:

a. PTC OPERATING and PTC OFF ALARM RESET indicators shall not be lighted.

b. G&N ON/PTC INHIBITED indicator shall be lighted.

c. Alarm shall not ring.

d. No voltage shall exist between J2-U and J2-R and between J2-U and J2-M.

e. No continuity shall exist between points listed in table 8.

Table 8. Open Circuits

FROM	TO
J2-C	J6-C
J2-E	J6-D
J2-F	J6-A
J2-G	J6-a
J2-S	J6-Z

VII. B. PROCEDURE (CONTINUED)

78. Remove 25 volts dc applied to J6.

79. Set ICTC POWER switch to OFF.

80. Disconnect panel power cable from 115 volt ac source.

81. Remove jumper lead connected between J2-L and J2-M.

82. Connect jumper lead between J6-b and J6-F.

83. Connect 17 (±1) ohm "Load" between J6-K and J6-L, using one 10 ohm, 100 watt, resistor, one 5 ohm, 50 watt resistor, and one two ohm, 25 watt resistor.

84. Connect common input-output terminal of auto transformer (Variac) to J2-R and J2-H.

85. Connect other input terminal of variac to J2-U.

86. Connect variable output terminal of variac to J2-B.

87. Set variac for zero output.

88. Connect panel power cable to 115 volt ac source.

89. Set ICTC POWER switch to ON.

90. Adjust variac for output of 28.0 (±0.3) volts ac.

VII. B. PROCEDURE (CONTINUED)

91. Check for voltage drop of 31.5 (±1.0) volts ac across "load" resistance (added in step 83).

92. Remove panel power cable from 115 volt ac source.

93. Remove jumper lead connected between J6-b and J6-F.

94. Decrease "load" resistance to 10 (±1) ohms by removing the 5 ohm and 2 ohm resistors.

95. Connect panel power cable to 115 volt ac source.

96. Check for voltage drop of 23.5 (±1.0) volts ac across "load" resistor.

96A. Set ICTC POWER switch to OFF.

96B. Disconnect panel power cable from 115 volt ac cource.

96C. Remove "load" resistor and variac (used for testing) from battery power pack panel assembly.

VII. B. PROCEDURE (CONTINUED)

96D. Hold battery power pack panel assembly in its normal horizontal plane (position it assumes when mounted in battery power pack case) and shake vigorously. (Shaking the panel will insure no air pockets exist in the mercury pool within the ampere hour meter. Air pockets can impair proper operation of the meter.)

96E. Reinstall modified battery power pack panel assembly in battery power pack case. Insure P3 is connected to J3 and P4 is connected to J4.

96F. Transfer serial number from existing nameplate on battery power pack assembly to new nameplate, P/N 1004260-510, supplied in kit. Use 1/8 inch high character metal stamp set to imprint data.

96G. Remove existing nameplate from battery power pack assembly. Dispose of nameplate as directed in Section IX of this RIB. Retain four screws to secure new nameplate.

97. Secure new nameplate on battery power pack assembly with four screws retained in step 96G. Apply sealing and retaining compound (MIL-S-22473, grade H) to threads of four screws before installing.

98. Install jumper lead between J2-L and J2-M.

VII. B. PROCEDURE (CONTINUED)

99. Connect 20 VA load (normal inverter load) between J2-U and J2-R. 20 VA load is 775 (±1%) ohms in parallel with 3.33 (±5%) henries.

100. Connect panel power cable to 115 volt ac source.

NOTE: Inhibit alarms in following steps as necessary.

101. Set ICTC POWER switch to ON.

102. Check to insure that 115 volts ac exists between J2-U and J2-R and between J2-T and J2-M.

103. Apply 25.2 (±0.2) volt dc (hi) to J6-G and (lo) to J6-H.

104. Check to insure that 115 volts ac exists between J2-T and J2-M and zero voltage between J2-U and J2-R.

105. Disconnect panel power cable from 115 volt ac source and check for the following indications:

a. Zero voltage between J2-T and J2-M.

b. G & N ON/PTC INHIBITED indicator remains lighted.

VII. B. PROCEDURE (CONTINUED)

c. PTC OPERATING indicator not lighted.

d. No alarms ring.

e. INVERTER POWER indicator shall be lighted.

106. Remove 28 volt power applied to J6.

107. Set ICTC POWER switch to OFF.

108. Install jumper lead between J2-K and J2-N.

109. Connect panel power cable to 115 volt ac source.

110. Set ICTC POWER switch to ON.

111. Inhibit alarm bell by pressing 115V LINE POWER indicator-switch.

112. Check to insure 115 volts ac exist between J2-T and J2-M.

113. Disconnect panel power cable from 115 volt ac source and check for the following indications.

a. 115 volts ac shall not exist between J2-T and J2-M.

VII. B. PROCEDURE (CONTINUED)

b. Alarm bell shall not ring.

c. Battery voltage of 28 (+7, -3) volts dc shall exist between J2-P (hi) and J2-N (lo).

d. EMERGENCY HEATER POWER indicator-switch shall be lighted. Pressing this indicator-switch shall not turn indicator off.

114. Connect panel power cable to 115 volt ac source and check for the following indications.

a. Battery voltage of 28 (+7, -3) volts dc shall not exist between J2-P (hi) and J2-N (lo).

b. 115 volts ac shall exist between J2-T and J2-M.

c. Alarm bell shall not ring.

d. EMERGENCY HEATER POWER indicator-switch shall not be lighted.

115. Set ICTC POWER switch to OFF.

116. Disconnect panel power cable from 115 volt ac source.

VII. B. PROCEDURE (CONTINUED)

117. Remove all jumper leads.

118. Reinstall modified battery power pack cover (with cable in stored positions) on battery power pack assembly.

119. Update Acceptance Data Package as indicated in Section VIII of this RIB.

VII. PROCEDURE (CONTINUED)

C. DETAILED INSTRUCTIONS FOR MODIFICATION OF COVER, P/N 1902541. Perform modification as follows:

1. Remove cable W100, P/N 1900955, from storage location in cover and set aside.

2. Remove cable W101, P/N 1900954, from storage location in cover and modify as directed in paragraph D of Section VII in this RIB.

3. Remove dummy receptacle, P/N 1016073-183, from cover. (This dummy receptacle is located in area exposed by section view A-A in figure 8.) Retain dummy receptacle and securing hardware.

4. Enlarge one of four vacated dummy receptacle mounting holes (shown in figure 8, section view A-A) to 0.164 to 0.171 inch diameter, using number 36 twist drill.

5. Touch up inner surfaces of other three vacant mounting holes with MIL-P-8585 primer and cashmere blue enamel paint, P/N 1016194. (These three holes will not be reused for mounting parts.)

6. Locate mark and drill two 0.216 to 0.224 inch diameter through holes in top of cover as shown in figure 8. Use 7/32 size twist drill to drill holes.

VII. C. PROCEDURE (CONTINUED)

7. Locate, mark and drill three 0.201 to 0.209 inch diameter through holes in top of cover as shown in figure 8. Use number 5 size twist drill to drill holes.

8. On side of cover where four dummy receptacles are presently mounted, perform the following:

a. Locate, mark and drill two clusters (4 holes per cluster) of 0.134 to 0.141 inch diameter through holes as shown in figure 8, section view B-B. Use number 29 size twist drill to drill holes.

b. Locate, mark and drill one cluster (4 holes) of 0.102 to 0.108 inch diameter through holes as shown in figure 8, section view B-B. Use number 37 size twist drill to drill holes.

9. On side of cover opposite side containing four dummy receptacles, locate, mark and drill six clusters (4 holes per cluster) of 0.134 to 0.141 inch diameter through holes as shown in figure 8, section view C-C. Use number 29 size twist drill to drill holes.

VII. C. PROCEDURE (CONTINUED)

10. Using 1/8 inch rubber stamp and black marking ink, apply markings "W-189", "W-100", "W-186", "W-187", "W-188", and "W-192" to inner surface of cover in locations shown in figure. (W-186, W-187, and W-188 markings shall appear in two locations.)

11. Remove instruction foilcal, P/N 1902540, from inner surface of cover. Dispose of foilcal as directed in Section IX of this RIB.

WARNING: Methyl-Ethyl-Ketone is toxic and flammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

NOTE: Insure mounting surface is clean prior to applying new instruction plate.

12. Obtain instruction plate, P/N 2901442, from kit and apply methyl-ethyl-ketone to activate adhesive backing on plate. Allow activated adhesive to air dry until surface becomes tacky before performing next step.

13. Mount new instruction plate in same location as previously occupied by removed foilcal. Insure orientation of plate is as indicated in figure 8. (Bottom edge being nearest to assembly identification mark on cover.)

VII. C. PROCEDURE (CONTINUED)

14. Obtain dummy receptacle, P/N 1016073-183, and securing hardware set aside in step 3 and install on cover as shown in figure 9.

15. Obtain dummy receptacle, P/N 1016073-103, from kit and secure to cover as shown in figure 9, using four kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

16. Obtain box mounting receptacle (housing only), P/N 1897424-001, from kit and secure to cover as shown in figure 9, using four kit supplied machine screws, P/N 1006783-12, and self locking nuts, P/N 1016151-002.

17. Obtain three dummy receptacles, P/N 1016073-143, from kit and secure to cover as shown in figure 9, using 12 kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

18. Obtain three dummy receptacles, P/N 1016073-163, from kit and secure to cover as shown in figure 9, using 12 kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

19. Obtain protective cap, P/N MS3181-16C, from kit and secure end of attached chain to hole in cover which was enlarged in step 4. Reference figures 8 and 9. Use kit supplied machine screw, P/N 1006783-23, and self locking nut, P/N 1016151-006, to secure it in place.

VII. C. PROCEDURE (CONTINUED)

20. Obtain cable clamp, P/N 1010400-006, from kit and secure to cover as shown in figure 9, using two kit supplied machine screws, P/N 1006783-44, and self locking nuts, P/N 1016151-010 (AN363C1032). Insure orientation of clamp is as shown in figure 9.

21. Obtain three clamps, P/N 1016105-004, from kit and secure to three new points on cover as shown in figure 9, using three kit supplied machine screws, P/N 1006783-44, and self locking nuts, P/N AN363C1032. Insure orientation of clamps is as shown in figure 9.

22. Remove identification mark "1902541" from inner surface of cover and replace with new identification number "1902632". Marking shall be in accordance with MIL-STD-130 (ES267).

23. Obtain and install cable W192 in cover as shown in figure 9.

24. Reinstall cable W100 in cover as shown in figure 9.

25. Obtain cables W186, W187, and W188 and mount in cover as shown in figure 9.

26. Obtain cable W189 (cable W101 becomes cable W189 after it is modified per this RIB) and mount in cover as shown in figure 9.

VII. PROCEDURE (CONTINUED)

D. DETAILED INSTRUCTIONS FOR MODIFICATION OF INTERCONNECT CABLE W101 (BPP TO IMU), P/N 1900954. Perform modification as follows:

1. Cut and remove cable identification sleeve (marked 1900954) from cable. Dispose of sleeve as directed in Section IX of this RIB.

2. Loosen two screws on connectors P1 and P2.

3. Cut and remove connector P1 and P2 identification sleeves from cable. Dispose of sleeves as directed in Section IX of this RIB.

4. Extract all leads from connector P2, using Bendix 11-7880-20 extraction tool.

5. Remove connector, grommet and telescoping bushing from P2 end of cable. Dispose of removed parts as directed in Section IX of this RIB.

6. Cut and remove tubing which covers cable. Dispose of tubing as directed in Section IX of this RIB.

7. Remove P1 telescoping bushing from cable. Retain two bushings, P/N AN3420-12A and P/N AN3420-16, for later reassembly and dispose of two bushings (with smallest inner diameter) P/N AN3420-6A and P/N AN3420-8A, as directed in Section IX of this RIB.

VII. D. PROCEDURE (CONTINUED)

8. Remove strain relief clamp, connector back shell and grommet insert from rear of connector P1 to permit access to P1 solder wells.

9. Unsolder lead A2 from P1-B and resolder to P1-Z.

10. Obtain leads A10 through A13 from kit lead set and install in cable as indicated in table 9. Accessory items are furnished in kit supplied connector, P/N 1897422-004.

Table 9. Cable Lead Additions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Strip Insul.	Tin	Accessory Item P/N	Remarks
A10	P1-G	P2-G	0.30 0.22	Yes No	MS3193A-20A	See note 1
A11	P1-H	P2-H	0.30 0.22	Yes No	MS3193A-20A	See note 1
A12	P1-F	P2-F	0.30 0.22	Yes No	MS3193A-20A	See note 1
A13	P1-b	P2-b	0.30 0.22	Yes No	MS3193A-20A	See note 1

Note 1 - Extract contact from applicable positions in kit supplied connector, using Bendix 11-7880-20 extraction tool. Crimp contact on lead using Buchanan MS3191-A crimping tool with Buchanan MS3191-20 positioner.

VII. D. PROCEDURE (CONTINUED)

11. Reinstall grommet insert and connector back shell on rear of connector P1.

12. Obtain zipper tubing, P/N 1902621-005, from kit and install on cable.

13. Obtain P1 identification sleeve, P/N 2901475, from kit and install on cable at P1. Position sleeve such that lettering reads away from P1 and that end of sleeve will lie under strain relief clamp. Heat shrink sleeve in place.

14. Reinstall at connector P1, two telescoping bushings, P/N AN3420-12A and P/N AN3420-16, removed and retained in step 7.

15. Secure strain relief clamp in place on cable. Insure adequate slack exists in cable leads and that bushings and sleeves are properly positioned in strain relief clamp before tightening screws.

16. Obtain cable identification sleeve, P/N 1902621-004, from kit. If sleeve has not been marked with identification number "2901446", mark it with this identification at this time. Marking should be white and 0.25 inch high.

VII. D. PROCEDURE (CONTINUED)

17. Slide cable identification sleeve, P/N 1902621-004, on cable to approximate center location and heat shrink in place.

18. Obtain P2 identification sleeve, P/N 2901199, from kit and position on P2 end of cable such that lettering reads away from P2. Do not heat shrink in place at this time.

19. Obtain strain relief grommet, P/N 1016282-16, from kit and slide on cable.

20. Install cable leads in kit supplied connector, P/N 1897422-004, (new connector P2) as indicated in table 10.

Table 10. New Connector P2 Termination

Lead Identification	Connector P2 Termination
A1	a
A2	P
A3	N
A4	Z
A5	K
A6	X
A7	R
A8	V
A9	W
A10	G
A11	H
A12	F
A13	b

VII. D. PROCEDURE (CONTINUED)

21. Fill unused holes in connector P2 with excess contacts obtained in step 20.

22. Fill unused holes in connector P2 grommet with plug end seals, P/N 1897370-001, supplied in kit.

23. Position P2 identification sleeve such that end of sleeve will lie under strain relief clamp on P2 connector. Heat shrink sleeve in place.

24. Position strain relief grommet under P2 connector strain relief clamp.

25. Secure strain relief clamp in place on cable. Insure adequate slack exists in cable leads before tightening screws.

26. Check for an indication of less than one ohm between the points listed in table 11.

Table 11. Cable W189 Continuity Check

From P1-	To P2-	From P1-	To P2-
A	N	J	V

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.
2. Make necessary entry in the Equipment Inventory Record.
3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

B. The significant part number changes resulting from this modification are as follows:

Name	Pre-modification P/N	Post-modification P/N
Battery Power Pack Assembly	1900011-031	1900011-041
Battery Power Pack Panel Assembly	1902249-021	1902630-011
Front Panel	1902179	1902629
Chassis	1902135	1902631
Wiring Harness A	1902539	1902620

VIII. MODIFICATION DESIGNATION (CONTINUED)

Name	Pre-modification P/N	Post-modification P/N
Wire List AA	1902190	1902622
Battery Power Pack Cover	1902541	1902632
*Cable Interconnect W101 (BPP to IMU)	1900954	2901446

*Cable name changes to "Cable Interconnect W189 (BPP to IMU)" upon completion of modification.

IX. DISPOSITION OF PARTS REMOVED

A. One connector-plug, P/N MS3126F18-32SX, (1897092-322) and two fuses, P/N F02A32V15AS, (1897099-117) shall be returned to stock as spares per AC Electronics, Logistics (Department 38-09) direction.

B. One resistor, P/N RE75G2490, (1896892-327) shall be transferred to full custody of the government via DD543 form (Inventory Schedule).

C. Scrap all parts not listed above, via AC Electronics form MIL-127 or equivalent.

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of Battery Power Pack Assembly, P/N 1900011-031. This modification will add the capability of using this assembly with Block II/LEM units, in conjunction with PTC P/N 1900496 as well as PTC P/N 2900060.

II. AUTHORITY

This retrofit is authorized by Block II/LEM contract NAS9-497 (CCA 497-0169).

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Battery Power Pack Assembly	1900011-031	1900011-041

IV. PRIORITY CHANGES

Not applicable.

Revision A

V. RELATED CHANGES

RIB 0102110 and RIB 0102111.

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102205, consisting of the following items is required to modify a Battery Power Pack Assembly, P/N 1900011-031.

Qty	Part Number	Description
1	0102092	Retrofit Instruction Bulletin
1	1016024-001	Relay, armature
1	1015982-006	Relay, armature
1	1897277-001	Rectifier bridge
1	1897261	Comparator
1	1897337-101	Light indicator assembly
1	1015982-007	Relay, armature
2	F02B32V15AS	Fuse (1897099-133)
1	1004260-510	Nameplate
1	1902621	Lead set
1	1897425	Transformer
1	CL25BJ151UP3	Capacitor (1897081-320)
2	1006783-45	Screw, button head
1	2901438	Component board assembly
4	1015860-001	Spacer
10	1012525-004	Nut
4	1006783-24	Screw, button head
4	AN960C6L	Washer, flat (1897006-036)

Sheet 4 of 66
Part No. 0102092
Date: 3 MAY 66
TDRR
Revision B

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
4	MS35338-79	Washer, lock
6	1006783-22	Screw, button head
2	1010676-1	Terminal, stud, insulated
2	1010618-13	Screw, button head, self locking
7	AN363C1032	Nut, self locking (1016151-010)
4	1016006-002	Splice reducer
2	1016006-003	Splice reducer

2	1010490-256	Sleeving, electrical insulation
1	1015818-616	Contact, socket
27	1015864-135	Sleeving, electrical insulation
25	1015864-137	Sleeving, electrical insulation
11	1015864-139	Sleeving, electrical insulation
9	1015864-138	Sleeving, electrical insulation
2	1016281-181	Contact, socket
1	2901441	Bracket assembly (inseparable)
1	2901442	Plate, instruction
1	1902626	Decal, functional area
1	1010490-200	Sleeving, electrical insulation
1	1016006-001	Splice reducer
1	2901443	Cable W186
1	2901444	Cable W187
1	2901445	Cable W188
1	2901447	Cable W192
32	1006783-19	Screw, button head
4	MS35338-78	Washer, lock
1	1897422-004	Connector, electrical
1	2901199	Sleeve, identification

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	2901475	Sleeve, identification
9	1897370-001	Plug, end seal
1	1016282-16	Grommet, connector strain relief
3	1016073-143	Dummy receptacle
3	1016073-163	Dummy receptacle
1	1016073-103	Dummy receptacle
1	1897424-001	Box mounting receptacle (housing only)
1	1010400-006	Cable clamp
1	MS3181-16C	Cap, protective
1	2901533	Guard, switch
2	MS35200-15	Screw, flat head
3	1016105-004	Clamp
28	1016151-004	Nut, self locking
5	1006783-44	Screw, machine
4	1016151-002	Nut, self locking
1	1006783-23	Screw, machine
1	1006151-006	Nut, self locking
4	1006783-12	Screw, machine

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
1	*ACSP 63L12A	Inductor, 3.33 (±3%) henries 300 ma ac-dc, 1 ohm max.
1	*Dale, type RH25 (Allied Catalog No.660, stock no. 26Z360C)	Resistor, 600 (±1%) ohm, 25 watt

*or equivalent

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Dale, type RH10 (Allied Catalog no. 660, stock no. 26Z352C)	Resistor, 175 (±1%) ohm, 10 watt
AR	N/A	Primer (MIL-P-8585)
AR	N/A	Paint, semi-gloss enamel, light gray (FED-STD-595 color 26440) (TT-E-529, class B)
AR	N/A	Varnish (MIL-V-6894A, unreduced)
1	*Schwaab Stamp & Seal Co., type AAG-0	Rubber stamp, 1/8 inch, thirteen band, alpha-numerical
AR	N/A	Lacquer thinner (MS35626)
AR	N/A	Clear lacquer (MIL-L-73A)
AR	N/A	Black marking ink
AR	N/A	Solder (QQ-S-571, SN60WRAP)
1	*Master Appliance, G7673A	Heat gun (300°F)
1	Buchanan MS3191-A	Crimping tool
1	Bendix 11-7758	Positioner
1	Bendix 11-8107-16	Insertion tool
1	Bendix 11-7880-16	Extraction tool
1	Burndy Y10MRF-4	Crimping tool
AR	N/A	Lacing & tying tape (MIL-T-713C, black, type P, class 2)

*or equivalent

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Greenfield Steel Stamp Works	Metal stamp set, 1/8 inch alpha-numerical
AR	N/A	Sealing & retaining compound (MIL-S-22473, grade H & HV)
1	Buchanan MS3191-20	Positioner
AR	MIL-I-631	Filler tape, type F, form T, (black) grade A, class I, 0.62 inch wide, 0.020 inch thick
1	Any hi-speed	7/32 size twist drill
1	Any hi-speed	Number 5 twist drill
1	Any hi-speed	Number 29 twist drill
1	Any hi-speed	Number 37 twist drill
1	Any hi-speed	Number 36 twist drill
1	Any hi-speed	1/8 size twist drill
1	*Cleveland Twist Drill Co.	80° countersink
1	*General Radio Co, model W5MT3	Auto-transformer (Variac)
AR	N/A	Methy-Ethyl-Ketone (TT-M-261)
1	*Ohmite (Allied Catalog no. 660, Stock no. 25Z795C)	Resistor, 10 ohm (±5%), 100 watt
1	*Ohmite (Allied Catalog no. 660 Stock no. 25Z783C)	Resistor, 5 ohm (±5%), 50 watt
1	*Ohmite (Allied Catalog no. 660, Stock no. 25Z776C)	Resistor, 2 ohm (±5%), 25 watt

*or equivalent

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

3. Where marking is specified, hand marking is acceptable.

4. Use heatsink device when unsoldering or soldering near semi-conductors.

5. Ink markings:

   a. Markings to be removed should be removed using lacquer thinner.

   b. New markings shall be covered with a coat of clear flat lacquer after ink has dried.

6. During this modification, lacing may be cut as required to accomplish necessary work. Spot ties will be added after all conductor rework has been completed.

VII. A. PROCEDURE (CONTINUED)

7. Delete conductors from wiring harness, when instructed, by one of the two following methods:

   a. Method One. (preferred)

      (1) Disconnect conductor from its termination points.

      (2) Clip attached termination hardware and/or exposed tinned tip(s) from all conductor ends and discard.

      (3) Pull conductor out of harness at most convenient point and discard.

   b. Method Two.

      (1) Disconnect conductor from its termination points.

      (2) Clip attached termination hardware and/or exposed tinned tip(s) from all conductor ends and discard.

      (3) Apply a drop of blue glyptal to severed ends of conductor.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Remove cover, P/N 1902541, from battery power pack assembly and modify as directed in paragraph C of Section VII in this RIB.

2. Open access door, P/N 1900471, on battery power pack assembly and disconnect P3 and P4 from their respective mating connectors.

3. Remove battery power pack panel assembly, P/N 1902249-021, from battery power pack assembly and set on work bench.

4. Remove two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure front panel, P/N 1902179, to (right side) chassis support, P/N 1900475. Retain screws and nuts.

5. Remove six machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure front panel to chassis. Retain screws and nuts.

6. Remove three machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure meter bracket, P/N 1900480, to chassis. Retain screws and nuts.

VII. B. PROCEDURE (CONTINUED)

NOTE: Maneuver front panel away from chassis as required to perform following steps. Care must be taken, however, not to put undue strain on wiring and wiring connections.

CAUTION: When cutting holes in front panel and chassis during this modification, take the following necessary measures to;

1. Insure metal chips, filing and etc are not allowed to fall into or on wiring, switches and other components.

2. Insure wiring is pushed aside as necessary to prevent drilling into them.

7. Cut three new holes in front panel, P/N 1902179, as shown in figure 1. Use 1/8 size twist drill to drill two holes near ICTC POWER switch. These two holes shall be countersunk as indicated in figure 1.

8. Touch up bare metal surfaces in new holes with MIL-P-8585 primer and TT-E 529, class B, semi-gloss enamel, light gray (color 26440 of FED-STD-595) paint.

9. Obtain decal, P/N 1902626, from kit and install on front panel as shown in figure 2. Apply a bead of varnish (MIL-V-6894A unreduced), overlapping all edges 1/4 inch minimum on decal.

VII. B. PROCEDURE (CONTINUED)

10. Obtain switch guard, P/N 2901533, from kit and secure to front panel over ICTC POWER switch with two kit supplied flat head screws, P/N MS35200-15. Apply sealing and retaining compound MIL-S-22473, grade HV to threads of screws before installing.

11. Mark "DS10" on backside of front panel in location shown in figure 3. New marking should be 0.125 inch high, color black per ND 1002019.

12. Remove identification number "1902179" stamped on back side of front panel and replace with new identification number "1902629". New identification shall be in accordance with MIL-STD-130 (ES267).

13. Obtain light-indicator assembly, P/N 1897337-101, from kit and mount on front panel as indicated in the following steps while referencing figure 4.

    a. Using fingernail slots on sides, pull lens assembly out approximately 5/8 inch. (Reference figure 4, view A.)

    b. Rotate lens assembly 90 degrees. (Reference figure 4, view B.)

    c. Push lens in to release tension on index keys and then pull complete assembly out and set aside.

VII. B. PROCEDURE (CONTINUED)

d. Unscrew two screws until captive nuts reach the rear of their travel range and remove cover. (One screw and captive nut is shown in figure 4, view C.)

e. Insert indicator assembly through panel cutout from the front of panel. (Reference figure 4, view D.)

f. From rear of panel, slip cover over indicator assembly until it fits snugly against rear of panel. (Reference figure 4, view D.)

g. Tighten two screws (with attached captive nuts) to draw cover up firmly to rear of panel. (Reference figure 4, view C.)

h. Insert lens and lamp assembly (see figure 4, view E) into indicator assembly so lamp board slot is aligned with lamp board index.

i. Rotate lens assembly 90 degrees (see figure 4, view F) and push assembly into indicator assembly.

14. Remove two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure (right side) chassis support, P/N 1900475, to chassis. Retain screws and nuts for later use. Remove (right side) chassis support, P/N 1900475, and dispose of as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

14A. Remove leads A26 and A172 connected to resistor R1.

14B. Remove resistor R1 from chassis. Dispose of resistor and securing screws and nuts as directed in Section IX of this RIB.

14C. Remove marking for R1 (R1 and terminal designations 1 and 2) stamped on chassis, using lacquer thinner.

CAUTION: When performing the following steps, use care to insure CR6, R13 and leads attached to R13 are not damaged. These parts will be removed and installed on a new bracket.

14D. Remove leads A23, A29, A167, and A169 from E9. (E9 is located on electronics components assembly, P/N 1902193.)

14E. Remove lead A166 from E10.

15. Remove lead A171 from E11.

16. Unsolder lead A170 from CR6-C.

17. Remove electronics components assembly, P/N 1902193, from chassis by removing two securing machine screws and self locking nuts. Dispose of removed screws and self locking nuts as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

18. Unsolder (do not cut) green and red leads connected to E10.

19. Unsolder (do not cut) yellow lead connected to CR6-A.

20. Remove resistor R13 from electronics components assembly, P/N 1902193. Retain mounting hardware.

21. Obtain bracket, P/N 2901441, from kit and mount R13 (removed in step 20) on bracket as shown in figure 5. Use original mounting hardware to secure R13 to bracket.

22. Remove diode CR6 from electronics components assembly, P/N 1902193.

23. Utilize original mounting hardware to secure CR6 on new bracket as shown in figure 5.

24. Dispose of electronics components assembly, P/N 1902193, (less R13 and CR6) as directed in Section IX of this RIB.

25. Locate, mark and cut two new holes in chassis as shown in figure 6. Use new bracket, P/N 2901441, as a template for locating two new holes. Do not use bracket for a template when drilling, however. Use 7/32 size twist drill for drilling operation.

VII. B. PROCEDURE (CONTINUED)

26. Touch up bare metal surfaces in two hew holes in chassis with MIL-P-8585 primer.

27. Remove identification number "1902135" and associated revision marking and replace with new identification number "1902631". New marking shall be in accordance with MIL-STD-130.

28. Remove leads listed in table 1 from wiring harness A.

Table 1. Wiring Harness A Lead Deletions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Remarks
A23	CR2-C	E9	Previously removed from E9
A26	K6-6	R1-1	Previously removed from R1
A29	CR1-C	E9	Previously removed from E9
A122	T3-3	XDS3-A	
A137	XDS3-B	XDS5-A	
A138	XDS4-B	XDS5-B	
A166	K6-5	E10	Previously removed from E10
A167	J4-L	E9	Cut off at J4-L, E9 end previously removed
A169	K5-1	E9	Previously removed from E9
A170	XF5-1	CR6-C	Previously removed from CR6
A171	K6-2	E11	Previously removed from E11
A172	TB1-11	R1-2	Previously removed from R1

VII. B. PROCEDURE (CONTINUED)

29. Obtain transformer (T4), P/N 1897425, from kit and secure to new bracket, P/N 2901441, as shown in figure 5, with four kit supplied button head screws, P/N 1006783-22, lock washers, P/N MS35338-79, and flat washers, P/N AN960C6L.

30. Obtain relay (K13), P/N 1016024-001, from kit and secure to new bracket as shown in figure 5, with two kit supplied button head screws, P/N 1006783 -22, and self locking nuts, P/N 1012525-004.

31. Obtain comparator (AR1), P/N 1897261, from kit and secure to new bracket as shown in figure 5, with four kit supplied button head screws, P/N 1006783 -19, and lock washers, P/N MS35338-78.

32. Obtain rectifier bridge (CR7), P/N 1897277-001, from kit and secure to new bracket as shown in figure 5.

33. Obtain relay(K14), P/N 1015982-006, from kit and secure to new bracket as shown in figure 5, with two kit supplied self locking nuts, P/N 1012525 -004.

34. Obtain relay (K12), P/N 1015982-007, from kit and secure to new bracket as shown in figure 5, with two kit supplied self locking nuts, P/N 1012525 -004.

VII. B. PROCEDURE (CONTINUED)

35. Obtain component board assembly (TB3), P/N 2901438, from kit and secure to new bracket as shown in figure 5, with four kit supplied spacers, P/N 1015860-001, self locking nuts, P/N 1012525-004, and button head screws, P/N 1006783-24.

36. Obtain one terminal stud (E15), P/N 1010676-1, from kit and secure to new bracket as shown in figure 5, with kit supplied button head screw, P/N 1010618-13.

37. Obtain one terminal stud (E16), P/N 1010676-1, from kit and secure to new bracket as shown in figure 5, with kit supplied button head screws, P/N 1010618-13.

38. Obtain capacitor (C2), P/N CL25BJ151UP3, from kit and insert in retaining clip as shown in figure 5, such that positive end is nearest E15.

39. Temporarily connect (mechanically) positive lead of C2 to E15 and negative lead to E16.

40. Temporarily connect (mechanically) the free end of yellow lead attached to R13, to TB3-9. Lead should be cut to required length, have insulation stripped 0.30 inch and tinned prior to connecting.

VII. B. PROCEDURE (CONTINUED)

41. Temporarily connect (mechanically) the free end of red lead and green lead attached to R13, to TB3-13. Leads should be cut to required length, have insulation stripped 0.30 inch and tinned prior to installing.

42. Install new wire list AA leads furnished in kit lead set, as indicated in table 2. Accessory items listed in table 2 are also furnished in kit. (Reference figure 7 for terminal identifications.)

A144	K2-D2	**K3-D2	0.30	Yes	1015864-135

*Combine with lead A120 at this point.
**Another lead (A189) will be added to this point later.

VII. B. PROCEDURE (CONTINUED)

45. Remove leads A71, A153, and A160 from E5 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

46. Remove leads A72, A154, and A161 from E6 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

47. Remove leads A73, A155, and A162 from E7 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

48. Remove leads A74, A156, and A163 from E8 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

49. Remove leads A82, A151, and A158 from E3 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

50. Obtain new wiring harness A leads from kit lead set and install as indicated in table 4. (Notes referenced in the remarks column in table 4 can be found at the rear of the table.)

Table 4. Wiring Harness A Lead Additions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Strip Insul	Tin	Accessory Item P/N	Remarks

Note 1 - Utilize blank contact in connector to make connection at this point.
Note 2 - Connection to this point will be accomplished later.
Note 3 - Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-16 positioner, extraction tool Bendix 11-7880-16, and insertion tool Bendix 11-8107-16 as required.
Note 4 - Do not solder as another lead (A202) will be connected later.

VII. B. PROCEDURE (CONTINUED)

Table 4. Wiring Harness A Lead Additions (continued)

Note 5 - Combine with leads A36, A111, and A168 at this point.
Note 6 - Remove lead A142 from K9-1 before connecting lead A214. Lead A142 will be reconnected to a new point later.

51. Obtain four electrical insulation sleeves, P/N 1010490-258, two electrical insulation sleeves, P/N 1010490-256, and one electrical insulation sleeve, P/N 1010490-200, and mark with the designation indicated in table 5. (Mark by hand with black ink.)

Table 5. Marking for Sleeves

Qty	Part Number	Identification Mark
1	1010490-258	E12
1	1010490-258	E13
1	1010490-258	E14
1	1010490-256	E17
1	1010490-258	E18
1	1010490-200	E19
1	1010490-256	E20

VII. B. PROCEDURE (CONTINUED)

52. Route loose ends of leads A142, A194, and A214 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-002, as follows:

 a. Eliminate excessive length and strip insulation 0.30 inch on three leads. (A214 will be crimped in small end of splice reducer.)

 b. Insert leads A142 and A194 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

 c. Obtain sleeve marked E18 (reference step 51) and slide over loose end of lead A214.

 d. Insert lead A214 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

 e. Slide sleeve marked E18 over crimped splice reducer and heat shrink in place.

53. Route loose ends of leads A82, A151, A158, and A179 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-003, as follows:

VII. B. PROCEDURE (CONTINUED)

 a. Eliminate excessive length and strip insulation 0.30 inch on four leads. (A82 and A179 will be crimped in small end of splice reducer.)

 b. Insert leads A151 and A158 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

 c. Obtain sleeve marked E17 (reference step 51) and slide over loose end of leads A82 and A179.

 d. Insert leads A82 and A179 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

 e. Slide sleeve marked E17 over crimped splice reducer and heat shrink in place.

54. Route loose ends of leads A72, A74, and A201 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1006006-002, as follows:

 a. Eliminate excessive length and strip insulation 0.30 inch on three leads.

 b. Insert leads A72, A74, and A201 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

VII. B. PROCEDURE (CONTINUED)

 c. Obtain sleeve marked E14 (reference step 51) and slide over splice reducer and heat shrink in place.

55. Route loose ends of leads A154, A156, A161, A163, and A200 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-002, as follows:

 a. Eliminate excessive length and strip insulation 0.30 inch on five leads. (A200 will be crimped in small end of splice reducer.)

 b. Insert leads A154, A156, A161, and A163 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

 c. Obtain sleeve marked E13 (reference step 51) and slide over loose end of lead A200.

 d. Insert lead A200 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

 e. Slide sleeve marked E13 over crimped splice reducer and heat shrink in place.

VII. B. PROCEDURE (CONTINUED)

56. Route loose ends of leads A71, A73, A153, A155, A160, A162, and A199 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer P/N 1016006-002, as follows:

 a. Eliminate excessive length and strip insulation 0.30 inch on seven leads. (A199, A71, and A73 will be crimped in small end of splice reducer.)

 b. Insert leads A153, A155, A160, and A162 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

 c. Obtain sleeve marked E12 (reference step 51) and slide over loose end of leads A199, A71, and A73.

 d. Insert leads A199, A71, and A73 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

 e. Slide sleeve marked E12 over crimped splice reducer and heat shrink in place.

57. Remove leads A143, A150, and A157 from E2 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

58. Route loose end of lead A215 to former E2 location on wiring harness A. Join leads A143, A150, A157, and A215 in kit supplied splice reducer, P/N 1016006-001, as follows:

    a. Eliminate excessive length from lead A215. (A215 will be crimped in large end of splice reducer.)

    b. Strip insulation on all four leads 0.30 inch.

    c. Insert A150, A157, and A215 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    d. Obtain sleeve marked E19 (reference step 51) and slide over loose end of lead A143.

    e. Insert lead A143 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    f. Slide sleeve marked E19 over crimped splice reducer and heat shrink in place.

59. Route loose ends of leads A207, A208, A209, and A211 to common meeting place on wiring harness A. Join these leads in kit supplied reducer, P/N 1016006-003, as follows:

VII. B. PROCEDURE (CONTINUED)

    a. Eliminate excessive length and strip insulation 0.30 inch on four leads. (A209 will be crimped in small end of splice reducer.)

    b. Insert leads A207, A208, and A211 in large end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    c. Obtain sleeve marked E20 (reference step 51) and slide over loose end of lead A209.

    d. Insert lead A209 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    e. Slide sleeve marked E20 over crimped splice reducer and heat shrink in place.

60. Spot tie wiring harness A as required in accordance with ND 1002032,using black lacing tape.

61. Remove wiring harness A identification tag (marked "1902539") from harness. Dispose of identification tag as directed in Section IX of this RIB.

62. Obtain identification band, P/N 1016128-021, from kit lead set. If band has not been marked with "1902620" identification number, mark it with this identification at this time.

VII. B. PROCEDURE (CONTINUED)

63. Secure new identification band to wiring harness A in same location occupied by old identification tag removed in step 61. Use black lacing tape to secure it in place.

64. Remove identification "ASSY 1902249-021" and replace it with "ASSY 1902630-011". Marking shall be in accordance with MIL-STD-130 (ES267).

65. Secure front panel to chassis with six machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, removed and retained in step 5.

66. Secure front panel to new bracket, P/N 2901441, with two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, supplied in kit.

67. Secure meter bracket, P/N 1900480, to chassis with three machine screws, P/N 1006783, and self locking nut, P/N AN363C1032, removed and retained in step 6.

68. Remove SPARE 15 AMP and BATTERY 15 AMP fuses and replace with two kit supplied fuses, P/N F02B32V15AS.

69. Perform continuity - resistance checks listed in table 6.

VII. B. PROCEDURE (CONTINUED)

Table 6. Continuity - Resistance Checks

FROM	TO	Indication (ohms)	Conditions
J2-K	J6-d	Less than 1	None
J2-K	J6-d	More than 100K	Press S6 (EMERGENCY HEATER POWER PRESS TO TURN OFF)
J2-C	J6-C	More than 100K	None
J2-E	J6-D	More than 100K	None
J2-F	J6-A	More than 100K	None
J2-G	J6-a	More than 100K	None
J2-S	J6-Z	More than 100K	None
J2-R	J2-M	More than 100K	None
J2-U	J2-M	More than 100K	None
J6-G	J6-H	More than 100K	None
J2-A	J2-H	Less than 1	None
J2-B	J2-J	Less than 1	None
J2-H	J6-L	Less than 1	None
J2-P	J6-N	Less than 1	None
J6-L	J6-V	Less than 1	None
J6-W	J6-K	Less than 1	None
J6-c	J6-T	Less than 1	None

70. Recalibrate potentiometer R13 as follows:

    a. Install jumper lead between TB3-3 and TB3-13.

VII. B. PROCEDURE (CONTINUED)

b. Turn R13 to clockwise limit.

c. Connect ohmmeter to pins L and N on connector J4. (Open indicates K5 is de-energized while short indicates K5 is energized.)

d. Apply 38 (±0.2) volts dc (hi) to J3-A and (lo) to J3-J.

e. Turn R13 counterclockwise to point where relay K5 energizes.

f. Decrease applied voltage to 33.5 (±0.5) volts dc.

g. Remove voltage applied to J3. Relay K5 shall de-energize.

h. Reapply 33.5 (±0.5) volts dc to same points on J3. Relay K5 shall not re-energize.

i. Slowly increase voltage at J3. Relay K5 shall energize at 38.0 (±0.2) volts dc. If relay K5 does not energize within 38.0 (±0.2) volt dc range, readjust R13 as necessary and repeat steps f through i until proper R13 setting is obtained. (Turning R13 clockwise increases voltage set point. One turn will result in approximate change of 0.25 volt.)

VII. B. PROCEDURE (CONTINUED)

j. Remove voltage applied to J3.

k. Remove ohmmeter from J4.

l. Remove jumper lead between TB3-3 and TB3-13.

71. Install jumper lead between J2-L and J2-M.

72. Connect panel power cable to 115 volt ac source.

73. Set ICTC POWER switch to ON. 115V LINE POWER and PTC OPERATING indicators shall light. (Inhibit alarm if necessary.)

74. Check to insure that 115 volts ac exists between J2-U and J2-R and between J2-T and J2-M.

75. Continuity shall exist between points listed in table 7.

Table 7. Closed Circuits

FROM	TO
J2-C	J6-C
J2-E	J6-D
J2-F	J6-A
J2-G	J6-a
J2-S	J6-Z

VII. B. PROCEDURE (CONTINUED)

76. Apply 25.0 (±0.2) volts dc (hi) to J6-G and (lo) to J6-H.

77. Check to insure the following conditions exist:

a. PTC OPERATING and PTC OFF ALARM RESET indicators shall not be lighted.

b. G&N ON/PTC INHIBITED indicator shall be lighted.

c. Alarm shall not ring.

d. No voltage shall exist between J2-U and J2-R and between J2-U and J2-M.

e. No continuity shall exist between points listed in table 8.

Table 8. Open Circuits

FROM	TO
J2-C	J6-C
J2-E	J6-D
J2-F	J6-A
J2-G	J6-a
J2-S	J6-Z

VII. B. PROCEDURE (CONTINUED)

78. Remove 25 volts dc applied to J6.

79. Set ICTC POWER switch to OFF.

80. Disconnect panel power cable from 115 volt ac source.

81. Remove jumper lead connected between J2-L and J2-M.

82. Connect jumper lead between J6-b and J6-F.

83. Connect 17 (±1) ohm "Load" between J6-K and J6-L, using one 10 ohm, 100 watt, resistor, one 5 ohm, 50 watt resistor, and one two ohm, 25 watt resistor.

84. Connect common input-output terminal of auto transformer (Variac) to J2-R and J2-H.

85. Connect other input terminal of variac to J2-U.

86. Connect variable output terminal of variac to J2-B.

87. Set variac for zero output.

88. Connect panel power cable to 115 volt ac source.

89. Set ICTC POWER switch to ON.

90. Adjust variac for output of 28.0 (±0.3) volts ac.

VII. B. PROCEDURE (CONTINUED)

91. Check for voltage drop of 31.5 (±1.0) volts ac across "load" resistance (added in step 83).

92. Remove panel power cable from 115 volt ac source.

93. Remove jumper lead connected between J6-b and J6-F.

94. Decrease "load" resistance to 10 (±1) ohms by removing the 5 ohm and 2 ohm resistors.

95. Connect panel power cable to 115 volt ac source.

96. Check for voltage drop of 23.5 (±1.0) volts ac across "load" resistor.

96A. Set ICTC POWER switch to OFF.

96B. Disconnect panel power cable from 115 volt ac cource.

96C. Remove "load" resistor and variac (used for testing) from battery power pack panel assembly.

VII. B. PROCEDURE (CONTINUED)

96D. Hold battery power pack panel assembly in its normal horizontal plane (position it assumes when mounted in battery power pack case) and shake vigorously. (Shaking the panel will insure no air pockets exist in the mercury pool within the ampere hour meter. Air pockets can impair proper operation of the meter.)

96E. Reinstall modified battery power pack panel assembly in battery power pack case. Insure P3 is connected to J3 and P4 is connected to J4.

96F. Transfer serial number from existing nameplate on battery power pack assembly to new nameplate, P/N 1004260-510, supplied in kit. Use 1/8 inch high character metal stamp set to imprint data.

96G. Remove existing nameplate from battery power pack assembly. Dispose of nameplate as directed in Section IX of this RIB. Retain four screws to secure new nameplate.

97. Secure new nameplate on battery power pack assembly with four screws retained in step 96G. Apply sealing and retaining compound (MIL-S-22473, grade H) to threads of four screws before installing.

98. Install jumper lead between J2-L and J2-M.

VII. B. PROCEDURE (CONTINUED)

99. Connect 20 VA load (normal inverter load) between J2-U and J2-R. 20 VA load is 775 (±1%) ohms in parallel with 3.33 (±5%) henries.

100. Connect panel power cable to 115 volt ac source.

NOTE: Inhibit alarms in following steps as necessary.

101. Set ICTC POWER switch to ON.

102. Check to insure that 115 volts ac exists between J2-U and J2-R and between J2-T and J2-M.

103. Apply 25.2 (±0.2) volt dc (hi) to J6-G and (lo) to J6-H.

104. Check to insure that 115 volts ac exists between J2-T and J2-M and zero voltage between J2-U and J2-R.

105. Disconnect panel power cable from 115 volt ac source and check for the following indications:

a. Zero voltage between J2-T and J2-M.

b. G & N ON/PTC INHIBITED indicator remains lighted.

VII. B. PROCEDURE (CONTINUED)

c. PTC OPERATING indicator not lighted.

d. No alarms ring.

e. INVERTER POWER indicator shall be lighted.

106. Remove 28 volt power applied to J6.

107. Set ICTC POWER switch to OFF.

108. Install jumper lead between J2-K and J2-N.

109. Connect panel power cable to 115 volt ac source.

110. Set ICTC POWER switch to ON.

111. Inhibit alarm bell by pressing 115V LINE POWER indicator-switch.

112. Check to insure 115 volts ac exist between J2-T and J2-M.

113. Disconnect panel power cable from 115 volt ac source and check for the following indications.

a. 115 volts ac shall not exist between J2-T and J2-M.

VII. B. PROCEDURE (CONTINUED)

b. Alarm bell shall not ring.

c. Battery voltage of 28 (+7, -3) volts dc shall exist between J2-P (hi) and J2-N (lo).

d. EMERGENCY HEATER POWER indicator-switch shall be lighted. Pressing this indicator-switch shall not turn indicator off.

114. Connect panel power cable to 115 volt ac source and check for the following indications.

a. Battery voltage of 28 (+7, -3) volts dc shall not exist between J2-P (hi) and J2-N (lo).

b. 115 volts ac shall exist between J2-T and J2-M.

c. Alarm bell shall not ring.

d. EMERGENCY HEATER POWER indicator-switch shall not be lighted.

115. Set ICTC POWER switch to OFF.

116. Disconnect panel power cable from 115 volt ac source.

VII. B. PROCEDURE (CONTINUED)

117. Remove all jumper leads.

118. Reinstall modified battery power pack cover (with cable in stored positions) on battery power pack assembly.

119. Update Acceptance Data Package as indicated in Section VIII of this RIB.

VII. PROCEDURE (CONTINUED)

C. DETAILED INSTRUCTIONS FOR MODIFICATION OF COVER, P/N 1902541. Perform modification as follows:

1. Remove cable W100, P/N 1900955, from storage location in cover and set aside.

2. Remove cable W101, P/N 1900954, from storage location in cover and modify as directed in paragraph D of Section VII in this RIB.

3. Remove dummy receptacle, P/N 1016073-183, from cover. (This dummy receptacle is located in area exposed by section view A-A in figure 8.) Retain dummy receptacle and securing hardware.

4. Enlarge one of four vacated dummy receptacle mounting holes (shown in figure 8, section view A-A) to 0.164 to 0.171 inch diameter, using number 36 twist drill.

5. Touch up inner surfaces of other three vacant mounting holes with MIL-P-8585 primer and cashmere blue enamel paint, P/N 1016194. (These three holes will not be reused for mounting parts.)

6. Locate mark and drill two 0.216 to 0.224 inch diameter through holes in top of cover as shown in figure 8. Use 7/32 size twist drill to drill holes.

VII. C. PROCEDURE (CONTINUED)

7. Locate, mark and drill three 0.201 to 0.209 inch diameter through holes in top of cover as shown in figure 8. Use number 5 size twist drill to drill holes.

8. On side of cover where four dummy receptacles are presently mounted, perform the following:

a. Locate, mark and drill two clusters (4 holes per cluster) of 0.134 to 0.141 inch diameter through holes as shown in figure 8, section view B-B. Use number 29 size twist drill to drill holes.

b. Locate, mark and drill one cluster (4 holes) of 0.102 to 0.108 inch diameter through holes as shown in figure 8, section view B-B. Use number 37 size twist drill to drill holes.

9. On side of cover opposite side containing four dummy receptacles, locate, mark and drill six clusters (4 holes per cluster) of 0.134 to 0.141 inch diameter through holes as shown in figure 8, section view C-C. Use number 29 size twist drill to drill holes.

VII. C. PROCEDURE (CONTINUED)

10. Using 1/8 inch rubber stamp and black marking ink, apply markings "W-189", "W-100", "W-186", "W-187", "W-188", and "W-192" to inner surface of cover in locations shown in figure. (W-186, W-187, and W-188 markings shall appear in two locations.)

11. Remove instruction foilcal, P/N 1902540, from inner surface of cover. Dispose of foilcal as directed in Section IX of this RIB.

WARNING: Methyl-Ethyl-Ketone is toxic and flammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

NOTE: Insure mounting surface is clean prior to applying new instruction plate.

12. Obtain instruction plate, P/N 2901442, from kit and apply methyl-ethyl-ketone to activate adhesive backing on plate. Allow activated adhesive to air dry until surface becomes tacky before performing next step.

13. Mount new instruction plate in same location as previously occupied by removed foilcal. Insure orientation of plate is as indicated in figure 8. (Bottom edge being nearest to assembly identification mark on cover.)

VII. C. PROCEDURE (CONTINUED)

14. Obtain dummy receptacle, P/N 1016073-183, and securing hardware set aside in step 3 and install on cover as shown in figure 9.

15. Obtain dummy receptacle, P/N 1016073-103, from kit and secure to cover as shown in figure 9, using four kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

16. Obtain box mounting receptacle (housing only), P/N 1897424-001, from kit and secure to cover as shown in figure 9, using four kit supplied machine screws, P/N 1006783-12, and self locking nuts, P/N 1016151-002.

17. Obtain three dummy receptacles, P/N 1016073-143, from kit and secure to cover as shown in figure 9, using 12 kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

18. Obtain three dummy receptacles, P/N 1016073-163, from kit and secure to cover as shown in figure 9, using 12 kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

19. Obtain protective cap, P/N MS3181-16C, from kit and secure end of attached chain to hole in cover which was enlarged in step 4. Reference figures 8 and 9. Use kit supplied machine screw, P/N 1006783-23, and self locking nut, P/N 1016151-006, to secure it in place.

VII. C. PROCEDURE (CONTINUED)

20. Obtain cable clamp, P/N 1010400-006, from kit and secure to cover as shown in figure 9, using two kit supplied machine screws, P/N 1006783-44, and self locking nuts, P/N 1016151-010 (AN363C1032). Insure orientation of clamp is as shown in figure 9.

21. Obtain three clamps, P/N 1016105-004, from kit and secure to three new points on cover as shown in figure 9, using three kit supplied machine screws, P/N 1006783-44, and self locking nuts, P/N AN363C1032. Insure orientation of clamps is as shown in figure 9.

22. Remove identification mark "1902541" from inner surface of cover and replace with new identification number "1902632". Marking shall be in accordance with MIL-STD-130 (ES267).

23. Obtain and install cable W192 in cover as shown in figure 9.

24. Reinstall cable W100 in cover as shown in figure 9.

25. Obtain cables W186, W187, and W188 and mount in cover as shown in figure 9.

26. Obtain cable W189 (cable W101 becomes cable W189 after it is modified per this RIB) and mount in cover as shown in figure 9.

VII. PROCEDURE (CONTINUED)

D. DETAILED INSTRUCTIONS FOR MODIFICATION OF INTERCONNECT CABLE W101 (BPP TO IMU), P/N 1900954. Perform modification as follows:

1. Cut and remove cable identification sleeve (marked 1900954) from cable. Dispose of sleeve as directed in Section IX of this RIB.

2. Loosen two screws on connectors P1 and P2.

3. Cut and remove connector P1 and P2 identification sleeves from cable. Dispose of sleeves as directed in Section IX of this RIB.

4. Extract all leads from connector P2, using Bendix 11-7880-20 extraction tool.

5. Remove connector, grommet and telescoping bushing from P2 end of cable. Dispose of removed parts as directed in Section IX of this RIB.

6. Cut and remove tubing which covers cable. Dispose of tubing as directed in Section IX of this RIB.

7. Remove P1 telescoping bushing from cable. Retain two bushings, P/N AN3420-12A and P/N AN3420-16, for later reassembly and dispose of two bushings (with smallest inner diameter) P/N AN3420-6A and P/N AN3420-8A, as directed in Section IX of this RIB.

VII. D. PROCEDURE (CONTINUED)

8. Remove strain relief clamp, connector back shell and grommet insert from rear of connector P1 to permit access to P1 solder wells.

9. Unsolder lead A2 from P1-B and resolder to P1-Z.

10. Obtain leads A10 through A13 from kit lead set and install in cable as indicated in table 9. Accessory items are furnished in kit supplied connector, P/N 1897422-004.

Table 9. Cable Lead Additions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Strip Insul.	Tin	Accessory Item P/N	Remarks
A10	P1-G	P2-G	0.30 0.22	Yes No	MS3193A-20A	See note 1
A11	P1-H	P2-H	0.30 0.22	Yes No	MS3193A-20A	See note 1
A12	P1-F	P2-F	0.30 0.22	Yes No	MS3193A-20A	See note 1
A13	P1-b	P2-b	0.30 0.22	Yes No	MS3193A-20A	See note 1

Note 1 - Extract contact from applicable positions in kit supplied connector, using Bendix 11-7880-20 extraction tool. Crimp contact on lead using Buchanan MS3191-A crimping tool with Buchanan MS3191-20 positioner.

VII. D. PROCEDURE (CONTINUED)

11. Reinstall grommet insert and connector back shell on rear of connector P1.

12. Obtain zipper tubing, P/N 1902621-005, from kit and install on cable.

13. Obtain P1 identification sleeve, P/N 2901475, from kit and install on cable at P1. Position sleeve such that lettering reads away from P1 and that end of sleeve will lie under strain relief clamp. Heat shrink sleeve in place.

14. Reinstall at connector P1, two telescoping bushings, P/N AN3420-12A and P/N AN3420-16, removed and retained in step 7.

15. Secure strain relief clamp in place on cable. Insure adequate slack exists in cable leads and that bushings and sleeves are properly positioned in strain relief clamp before tightening screws.

16. Obtain cable identification sleeve, P/N 1902621-004, from kit. If sleeve has not been marked with identification number "2901446", mark it with this identification at this time. Marking should be white and 0.25 inch high.

VII. D. PROCEDURE (CONTINUED)

17. Slide cable identification sleeve, P/N 1902621-004, on cable to approximate center location and heat shrink in place.

18. Obtain P2 identification sleeve, P/N 2901199, from kit and position on P2 end of cable such that lettering reads away from P2. Do not heat shrink in place at this time.

19. Obtain strain relief grommet, P/N 1016282-16, from kit and slide on cable.

20. Install cable leads in kit supplied connector, P/N 1897422-004, (new connector P2) as indicated in table 10.

Table 10. New Connector P2 Termination

A10	G
A11	H
A12	F
A13	b

VII. D. PROCEDURE (CONTINUED)

21. Fill unused holes in connector P2 with excess contacts obtained in step 20.

22. Fill unused holes in connector P2 grommet with plug end seals, P/N 1897370-001, supplied in kit.

23. Position P2 identification sleeve such that end of sleeve will lie under strain relief clamp on P2 connector. Heat shrink sleeve in place.

24. Position strain relief grommet under P2 connector strain relief clamp.

25. Secure strain relief clamp in place on cable. Insure adequate slack exists in cable leads before tightening screws.

26. Check for an indication of less than one ohm between the points listed in table 11.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

B. The significant part number changes resulting from this modification are as follows:

Name	Pre-modification P/N	Post-modification P/N
Battery Power Pack Assembly	1900011-031	1900011-041
Battery Power Pack Panel Assembly	1902249-021	1902630-011
Front Panel	1902179	1902629
Chassis	1902135	1902631
Wiring Harness A	1902539	1902620

VIII. MODIFICATION DESIGNATION (CONTINUED)

Name	Pre-modification P/N	Post-modification P/N
Wire List AA	1902190	1902622
Battery Power Pack Cover	1902541	1902632
*Cable Interconnect W101 (BPP to IMU)	1900954	2901446

*Cable name changes to "Cable Interconnect W189 (BPP to IMU)" upon completion of modification.

IX. DISPOSITION OF PARTS REMOVED

A. One connector-plug, P/N MS3126F18-32SX, (1897092-322) and two fuses, P/N F02A32V15AS, (1897099-117) shall be returned to stock as spares per AC Electronics, Logistics (Department 38-09) direction.

B. One resistor, P/N RE75G2490, (1896892-327) shall be transferred to full custody of the government via DD543 form (Inventory Schedule).

C. Scrap all parts not listed above, via AC Electronics form MIL-127 or equivalent.

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of Battery Power Pack Assembly, P/N 1900011-031. This modification will add the capability of using this assembly with Block II/LEM units, in conjunction with PTC P/N 1900496 as well as PTC P/N 2900060.

II. AUTHORITY

This retrofit is authorized by Block II/LEM contract NAS9-497 (CCA 497-0169).

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Battery Power Pack Assembly	1900011-031	1900011-041

IV. PRIORITY CHANGES

Not applicable.

V. RELATED CHANGES

RIB 0102110 and RIB 0102111.

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102205, consisting of the following items is required to modify a Battery Power Pack Assembly, P/N 1900011-031.

Qty	Part Number	Description
1	0102092	Retrofit Instruction Bulletin
1	1016024-001	Relay, armature
1	1015982-006	Relay, armature
1	1897277-001	Rectifier bridge
1	1897261	Comparator
1	1897337-101	Light indicator assembly
1	1015982-007	Relay, armature
2	F02B32V15AS	Fuse (1897099-133)
1	1004260-510	Nameplate
1	1902621	Lead set
1	1897425	Transformer
1	CL25BJ151UP3	Capacitor (1897081-320)
2	1006783-45	Screw, button head
1	2901438	Component board assembly
4	1015860-001	Spacer
10	1012525-004	Nut
4	1006783-24	Screw, button head
4	AN960C6L	Washer, flat (1897006-036)

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
4	MS35338-79	Washer, lock
6	1006783-22	Screw, button head
2	1010676-1	Terminal, stud, insulated
2	1010618-13	Screw, button head, self locking
7	AN363C1032	Nut, self locking (1016151-010)
4	1016006-002	Splice reducer
2	1016006-003	Splice reducer
4	1010490-258	Sleeving, electrical insulation
2	1010490-256	Sleeving, electrical insulation
1	1015818-616	Contact, socket
27	1015864-135	Sleeving, electrical insulation
25	1015864-137	Sleeving, electrical insulation
11	1015864-139	Sleeving, electrical insulation
9	1015864-138	Sleeving, electrical insulation
2	1016281-181	Contact, socket
1	2901441	Bracket assembly (inseparable)
1	2901442	Plate, instruction
1	1902626	Decal, functional area
1	1010490-200	Sleeving, electrical insulation
1	1016006-001	Splice reducer
1	2901443	Cable W186
1	2901444	Cable W187
1	2901445	Cable W188
1	2901447	Cable W192
32	1006783-19	Screw, button head
4	MS35338-78	Washer, lock
1	1897422-004	Connector, electrical
1	2901199	Sleeve, identification

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	2901475	Sleeve, identification
9	1897370-001	Plug, end seal
1	1016282-16	Grommet, connector strain relief
3	1016073-143	Dummy receptacle
3	1016073-163	Dummy receptacle
1	1016073-103	Dummy receptacle
1	1897424-001	Box mounting receptacle (housing only)
1	1010400-006	Cable clamp
1	MS3181-16C	Cap, protective
1	2901533	Guard, switch
2	MS35200-15	Screw, flat head
3	1016105-004	Clamp
28	1016151-004	Nut, self locking
5	1006783-44	Screw, machine
4	1016151-002	Nut, self locking
1	1006783-23	Screw, machine
1	1006151-006	Nut, self locking
4	1006783-12	Screw, machine

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
1	*ACSP 63L12A	Inductor, 3.33 (±3%) henries 300 ma ac-dc, 1 ohm max.
1	*Dale, type RH25 (Allied Catalog No.660, stock no. 26Z360C)	Resistor, 600 (±1%) ohm, 25 watt

*or equivalent

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Dale, type RH10 (Allied Catalog no. 660, stock no. 26Z352C)	Resistor, 175 (±1%) ohm, 10 watt
AR	N/A	Primer (MIL-P-8585)
AR	N/A	Paint, semi-gloss enamel, light gray (FED-STD-595 color 26440) (TT-E-529, class B)
AR	N/A	Varnish (MIL-V-6894A, unreduced)
1	*Schwaab Stamp & Seal Co., type AAG-0	Rubber stamp, 1/8 inch, thirteen band, alpha-numerical
AR	N/A	Lacquer thinner (MS35626)
AR	N/A	Clear lacquer (MIL-L-73A)
AR	N/A	Black marking ink
AR	N/A	Solder (QQ-S-571, SN60WRAP)
1	*Master Appliance, G7673A	Heat gun (300°F)
1	Buchanan MS3191-A	Crimping tool
1	Bendix 11-7758	Positioner
1	Bendix 11-8107-16	Insertion tool
1	Bendix 11-7880-16	Extraction tool
1	Burndy Y10MRF-4	Crimping tool
AR	N/A	Lacing & tying tape (MIL-T-713C, black, type P, class 2)

*or equivalent

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Greenfield Steel Stamp Works	Metal stamp set, 1/8 inch alpha-numerical
AR	N/A	Sealing & retaining compound (MIL-S-22473, grade H & HV)
1	Buchanan MS3191-20	Positioner
AR	MIL-I-631	Filler tape, type F, form T, (black) grade A, class I, 0.62 inch wide, 0.020 inch thick
1	Any hi-speed	7/32 size twist drill
1	Any hi-speed	Number 5 twist drill
1	Any hi-speed	Number 29 twist drill
1	Any hi-speed	Number 37 twist drill
1	Any hi-speed	Number 36 twist drill
1	Any hi-speed	1/8 size twist drill
1	*Cleveland Twist Drill Co.	80° countersink
1	*General Radio Co, model W5MT3	Auto-transformer (Variac)
AR	N/A	Methy-Ethyl-Ketone (TT-M-261)
1	*Ohmite (Allied Catalog no. 660, Stock no. 25Z795C)	Resistor, 10 ohm (±5%), 100 watt
1	*Ohmite (Allied Catalog no. 660 Stock no. 25Z783C)	Resistor, 5 ohm (±5%), 50 watt
1	*Ohmite (Allied Catalog no. 660, Stock no. 25Z776C)	Resistor, 2 ohm (±5%), 25 watt

*or equivalent

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

3. Where marking is specified, hand marking is acceptable.

4. Use heatsink device when unsoldering or soldering near semi-conductors.

5. Ink markings:

   a. Markings to be removed should be removed using lacquer thinner.

   b. New markings shall be covered with a coat of clear flat lacquer after ink has dried.

6. During this modification, lacing may be cut as required to accomplish necessary work. Spot ties will be added after all conductor rework has been completed.

VII. A. PROCEDURE (CONTINUED)

7. Delete conductors from wiring harness, when instructed, by one of the two following methods:

   a. Method One. (preferred)

      (1) Disconnect conductor from its termination points.

      (2) Clip attached termination hardware and/or exposed tinned tip(s) from all conductor ends and discard.

      (3) Pull conductor out of harness at most convenient point and discard.

   b. Method Two.

      (1) Disconnect conductor from its termination points.

      (2) Clip attached termination hardware and/or exposed tinned tip(s) from all conductor ends and discard.

      (3) Apply a drop of blue glyptal to severed ends of conductor.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Remove cover, P/N 1902541, from battery power pack assembly and modify as directed in paragraph C of Section VII in this RIB.

2. Open access door, P/N 1900471, on battery power pack assembly and disconnect P3 and P4 from their respective mating connectors.

3. Remove battery power pack panel assembly, P/N 1902249-021, from battery power pack assembly and set on work bench.

4. Remove two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure front panel, P/N 1902179, to (right side) chassis support, P/N 1900475. Retain screws and nuts.

5. Remove six machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure front panel to chassis. Retain screws and nuts.

6. Remove three machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure meter bracket, P/N 1900480, to chassis. Retain screws and nuts.

VII. B. PROCEDURE (CONTINUED)

NOTE: Maneuver front panel away from chassis as required to perform following steps. Care must be taken, however, not to put undue strain on wiring and wiring connections.

CAUTION: When cutting holes in front panel and chassis during this modification, take the following necessary measures to;

1. Insure metal chips, filing and etc are not allowed to fall into or on wiring, switches and other components.

2. Insure wiring is pushed aside as necessary to prevent drilling into them.

7. Cut three new holes in front panel, P/N 1902179, as shown in figure 1. Use 1/8 size twist drill to drill two holes near ICTC POWER switch. These two holes shall be countersunk as indicated in figure 1.

8. Touch up bare metal surfaces in new holes with MIL-P-8585 primer and TT-E 529, class B, semi-gloss enamel, light gray (color 26440 of FED-STD-595) paint.

9. Obtain decal, P/N 1902626, from kit and install on front panel as shown in figure 2. Apply a bead of varnish (MIL-V-6894A unreduced), overlapping all edges 1/4 inch minimum on decal.

VII. B. PROCEDURE (CONTINUED)

10. Obtain switch guard, P/N 2901533, from kit and secure to front panel over ICTC POWER switch with two kit supplied flat head screws, P/N MS35200-15. Apply sealing and retaining compound MIL-S-22473, grade HV to threads of screws before installing.

11. Mark "DS10" on backside of front panel in location shown in figure 3. New marking should be 0.125 inch high, color black per ND 1002019.

12. Remove identification number "1902179" stamped on back side of front panel and replace with new identification number "1902629". New identification shall be in accordance with MIL-STD-130 (ES267).

13. Obtain light-indicator assembly, P/N 1897337-101, from kit and mount on front panel as indicated in the following steps while referencing figure 4.

    a. Using fingernail slots on sides, pull lens assembly out approximately 5/8 inch. (Reference figure 4, view A.)

    b. Rotate lens assembly 90 degrees. (Reference figure 4, view B.)

    c. Push lens in to release tension on index keys and then pull complete assembly out and set aside.

VII. B. PROCEDURE (CONTINUED)

d. Unscrew two screws until captive nuts reach the rear of their travel range and remove cover. (One screw and captive nut is shown in figure 4, view C.)

e. Insert indicator assembly through panel cutout from the front of panel. (Reference figure 4, view D.)

f. From rear of panel, slip cover over indicator assembly until it fits snugly against rear of panel. (Reference figure 4, view D.)

g. Tighten two screws (with attached captive nuts) to draw cover up firmly to rear of panel. (Reference figure 4, view C.)

h. Insert lens and lamp assembly (see figure 4, view E) into indicator assembly so lamp board slot is aligned with lamp board index.

i. Rotate lens assembly 90 degrees (see figure 4, view F) and push assembly into indicator assembly.

14. Remove two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure (right side) chassis support, P/N 1900475, to chassis. Retain screws and nuts for later use. Remove (right side) chassis support, P/N 1900475, and dispose of as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

14A. Remove leads A26 and A172 connected to resistor R1.

14B. Remove resistor R1 from chassis. Dispose of resistor and securing screws and nuts as directed in Section IX of this RIB.

14C. Remove marking for R1 (R1 and terminal designations 1 and 2) stamped on chassis, using lacquer thinner.

CAUTION: When performing the following steps, use care to insure CR6, R13 and leads attached to R13 are not damaged. These parts will be removed and installed on a new bracket.

14D. Remove leads A23, A29, A167, and A169 from E9. (E9 is located on electronics components assembly, P/N 1902193.)

14E. Remove lead A166 from E10.

15. Remove lead A171 from E11.

16. Unsolder lead A170 from CR6-C.

17. Remove electronics components assembly, P/N 1902193, from chassis by removing two securing machine screws and self locking nuts. Dispose of removed screws and self locking nuts as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

18. Unsolder (do not cut) green and red leads connected to E10.

19. Unsolder (do not cut) yellow lead connected to CR6-A.

20. Remove resistor R13 from electronics components assembly, P/N 1902193. Retain mounting hardware.

21. Obtain bracket, P/N 2901441, from kit and mount R13 (removed in step 20) on bracket as shown in figure 5. Use original mounting hardware to secure R13 to bracket.

22. Remove diode CR6 from electronics components assembly, P/N 1902193.

23. Utilize original mounting hardware to secure CR6 on new bracket as shown in figure 5.

24. Dispose of electronics components assembly, P/N 1902193, (less R13 and CR6) as directed in Section IX of this RIB.

25. Locate, mark and cut two new holes in chassis as shown in figure 6. Use new bracket, P/N 2901441, as a template for locating two new holes. Do not use bracket for a template when drilling, however. Use 7/32 size twist drill for drilling operation.

VII. B. PROCEDURE (CONTINUED)

26. Touch up bare metal surfaces in two hew holes in chassis with MIL-P-8585 primer.

27. Remove identification number "1902135" and associated revision marking and replace with new identification number "1902631". New marking shall be in accordance with MIL-STD-130.

28. Remove leads listed in table 1 from wiring harness A.

Table 1. Wiring Harness A Lead Deletions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Remarks
A23	CR2-C	E9	Previously removed from E9
A26	K6-6	R1-1	Previously removed from R1
A29	CR1-C	E9	Previously removed from E9
A122	T3-3	XDS3-A	
A137	XDS3-B	XDS5-A	
A138	XDS4-B	XDS5-B	
A166	K6-5	E10	Previously removed from E10
A167	J4-L	E9	Cut off at J4-L, E9 end previously removed
A169	K5-1	E9	Previously removed from E9
A170	XF5-1	CR6-C	Previously removed from CR6
A171	K6-2	E11	Previously removed from E11
A172	TB1-11	R1-2	Previously removed from R1

VII. B. PROCEDURE (CONTINUED)

29. Obtain transformer (T4), P/N 1897425, from kit and secure to new bracket, P/N 2901441, as shown in figure 5, with four kit supplied button head screws, P/N 1006783-22, lock washers, P/N MS35338-79, and flat washers, P/N AN960C6L.

30. Obtain relay (K13), P/N 1016024-001, from kit and secure to new bracket as shown in figure 5, with two kit supplied button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004.

31. Obtain comparator (AR1), P/N 1897261, from kit and secure to new bracket as shown in figure 5, with four kit supplied button head screws, P/N 1006783-19, and lock washers, P/N MS35338-78.

32. Obtain rectifier bridge (CR7), P/N 1897277-001, from kit and secure to new bracket as shown in figure 5.

33. Obtain relay(K14), P/N 1015982-006, from kit and secure to new bracket as shown in figure 5, with two kit supplied self locking nuts, P/N 1012525-004.

34. Obtain relay (K12), P/N 1015982-007, from kit and secure to new bracket as shown in figure 5, with two kit supplied self locking nuts, P/N 1012525-004.

VII. B. PROCEDURE (CONTINUED)

35. Obtain component board assembly (TB3), P/N 2901438, from kit and secure to new bracket as shown in figure 5, with four kit supplied spacers, P/N 1015860-001, self locking nuts, P/N 1012525-004, and button head screws, P/N 1006783-24.

36. Obtain one terminal stud (E15), P/N 1010676-1, from kit and secure to new bracket as shown in figure 5, with kit supplied button head screw, P/N 1010618-13.

37. Obtain one terminal stud (E16), P/N 1010676-1, from kit and secure to new bracket as shown in figure 5, with kit supplied button head screws, P/N 1010618-13.

38. Obtain capacitor (C2), P/N CL25BJ151UP3, from kit and insert in retaining clip as shown in figure 5, such that positive end is nearest E15.

39. Temporarily connect (mechanically) positive lead of C2 to E15 and negative lead to E16.

40. Temporarily connect (mechanically) the free end of yellow lead attached to R13, to TB3-9. Lead should be cut to required length, have insulation stripped 0.30 inch and tinned prior to connecting.

VII. B. PROCEDURE (CONTINUED)

41. Temporarily connect (mechanically) the free end of red lead and green lead attached to R13, to TB3-13. Leads should be cut to required length, have insulation stripped 0.30 inch and tinned prior to installing.

42. Install new wire list AA leads furnished in kit lead set, as indicated in table 2. Accessory items listed in table 2 are also furnished in kit. (Reference figure 7 for terminal identifications.)

Table 2. Wire List AA Additions

Lead Ident	FROM Ckt. Pt.	TO Ckt. Pt.	Strip Insul	Tin	Accessory Item P/N	Remarks

A144	K2-D2	**K3-D2	0.30	Yes	1015864-135

*Combine with lead A120 at this point.
**Another lead (A189) will be added to this point later.

VII. B. PROCEDURE (CONTINUED)

45. Remove leads A71, A153, and A160 from E5 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

46. Remove leads A72, A154, and A161 from E6 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

47. Remove leads A73, A155, and A162 from E7 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

48. Remove leads A74, A156, and A163 from E8 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

49. Remove leads A82, A151, and A158 from E3 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

50. Obtain new wiring harness A leads from kit lead set and install as indicated in table 4. (Notes referenced in the remarks column in table 4 can be found at the rear of the table.)

Table 4. Wiring Harness A Lead Additions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Strip Insul	Tin	Accessory Item P/N	Remarks

		J6-c	0.30	Yes	1015864-138	

Note 1 - Utilize blank contact in connector to make connection at this point.
Note 2 - Connection to this point will be accomplished later.
Note 3 - Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-16 positioner, extraction tool Bendix 11-7880-16, and insertion tool Bendix 11-8107-16 as required.
Note 4 - Do not solder as another lead (A202) will be connected later.

VII. B. PROCEDURE (CONTINUED)

Table 4. Wiring Harness A Lead Additions (continued)

Note 5 - Combine with leads A36, A111, and A168 at this point.
Note 6 - Remove lead A142 from K9-1 before connecting lead A214. Lead A142 will be reconnected to a new point later.

51. Obtain four electrical insulation sleeves, P/N 1010490-258, two electrical insulation sleeves, P/N 1010490-256, and one electrical insulation sleeve, P/N 1010490-200, and mark with the designation indicated in table 5. (Mark by hand with black ink.)

Table 5. Marking for Sleeves

Qty	Part Number	Identification Mark
1	1010490-258	E12
1	1010490-258	E13
1	1010490-258	E14
1	1010490-256	E17
1	1010490-258	E18
1	1010490-200	E19
1	1010490-256	E20

VII. B. PROCEDURE (CONTINUED)

52. Route loose ends of leads A142, A194, and A214 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-002, as follows:

a. Eliminate excessive length and strip insulation 0.30 inch on three leads. (A214 will be crimped in small end of splice reducer.)

b. Insert leads A142 and A194 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

c. Obtain sleeve marked E18 (reference step 51) and slide over loose end of lead A214.

d. Insert lead A214 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

e. Slide sleeve marked E18 over crimped splice reducer and heat shrink in place.

53. Route loose ends of leads A82, A151, A158, and A179 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-003, as follows:

VII. B. PROCEDURE (CONTINUED)

a. Eliminate excessive length and strip insulation 0.30 inch on four leads. (A82 and A179 will be crimped in small end of splice reducer.)

b. Insert leads A151 and A158 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

c. Obtain sleeve marked E17 (reference step 51) and slide over loose end of leads A82 and A179.

d. Insert leads A82 and A179 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

e. Slide sleeve marked E17 over crimped splice reducer and heat shrink in place.

54. Route loose ends of leads A72, A74, and A201 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1006006-002, as follows:

a. Eliminate excessive length and strip insulation 0.30 inch on three leads.

b. Insert leads A72, A74, and A201 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

VII. B. PROCEDURE (CONTINUED)

c. Obtain sleeve marked E14 (reference step 51) and slide over splice reducer and heat shrink in place.

55. Route loose ends of leads A154, A156, A161, A163, and A200 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-002, as follows:

a. Eliminate excessive length and strip insulation 0.30 inch on five leads. (A200 will be crimped in small end of splice reducer.)

b. Insert leads A154, A156, A161, and A163 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

c. Obtain sleeve marked E13 (reference step 51) and slide over loose end of lead A200.

d. Insert lead A200 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

e. Slide sleeve marked E13 over crimped splice reducer and heat shrink in place.

VII. B. PROCEDURE (CONTINUED)

56. Route loose ends of leads A71, A73, A153, A155, A160, A162, and A199 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer P/N 1016006-002, as follows:

a. Eliminate excessive length and strip insulation 0.30 inch on seven leads. (A199, A71, and A73 will be crimped in small end of splice reducer.)

b. Insert leads A153, A155, A160, and A162 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

c. Obtain sleeve marked E12 (reference step 51) and slide over loose end of leads A199, A71, and A73.

d. Insert leads A199, A71, and A73 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

e. Slide sleeve marked E12 over crimped splice reducer and heat shrink in place.

57. Remove leads A143, A150, and A157 from E2 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

58. Route loose end of lead A215 to former E2 location on wiring harness A. Join leads A143, A150, A157, and A215 in kit supplied splice reducer, P/N 1016006-001, as follows:

    a. Eliminate excessive length from lead A215. (A215 will be crimped in large end of splice reducer.)

    b. Strip insulation on all four leads 0.30 inch.

    c. Insert A150, A157, and A215 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    d. Obtain sleeve marked E19 (reference step 51) and slide over loose end of lead A143.

    e. Insert lead A143 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    f. Slide sleeve marked E19 over crimped splice reducer and heat shrink in place.

59. Route loose ends of leads A207, A208, A209, and A211 to common meeting place on wiring harness A. Join these leads in kit supplied reducer, P/N 1016006-003, as follows:

VII. B. PROCEDURE (CONTINUED)

    a. Eliminate excessive length and strip insulation 0.30 inch on four leads. (A209 will be crimped in small end of splice reducer.)

    b. Insert leads A207, A208, and A211 in large end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    c. Obtain sleeve marked E20 (reference step 51) and slide over loose end of lead A209.

    d. Insert lead A209 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    e. Slide sleeve marked E20 over crimped splice reducer and heat shrink in place.

60. Spot tie wiring harness A as required in accordance with ND 1002032,using black lacing tape.

61. Remove wiring harness A identification tag (marked "1902539") from harness. Dispose of identification tag as directed in Section IX of this RIB.

62. Obtain identification band, P/N 1016128-021, from kit lead set. If band has not been marked with "1902620" identification number, mark it with this identification at this time.

VII. B. PROCEDURE (CONTINUED)

63. Secure new identification band to wiring harness A in same location occupied by old identification tag removed in step 61. Use black lacing tape to secure it in place.

64. Remove identification "ASSY 1902249-021" and replace it with "ASSY 1902630-011". Marking shall be in accordance with MIL-STD-130 (ES267).

65. Secure front panel to chassis with six machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, removed and retained in step 5.

66. Secure front panel to new bracket, P/N 2901441, with two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, supplied in kit.

67. Secure meter bracket, P/N 1900480, to chassis with three machine screws, P/N 1006783, and self locking nut, P/N AN363C1032, removed and retained in step 6.

68. Remove SPARE 15 AMP and BATTERY 15 AMP fuses and replace with two kit supplied fuses, P/N F02B32V15AS.

VII. B. PROCEDURE (CONTINUED)

68A. Locate Ampere Hour Meter, P/N 1900314, M1, and remove four (4) screws holding plastic dust cover to meter. Retain screws.

68B. Carefully remove plastic dust cover to ensure no damage occurs to gasket.

68C. Lift red pointer until disengaged from inner dial.

68D. Rotate inner dial to gear tooth closest to 30 and engage red pointer to inner dial.

68E. Carefully replace plastic dust cover removed in step 68B using screws removed in step 68A.

69. Perform continuity - resistance checks listed in table 6.

VII. B. PROCEDURE (CONTINUED)

Table 6. Continuity - Resistance Checks

FROM	TO	Indication (ohms)	Conditions
J2-K	J6-d	Less than 1	None
J2-K	J6-d	More than 100K	Press S6 (EMERGENCY HEATER POWER PRESS TO TURN OFF)
J2-C	J6-C	More than 100K	None
J2-E	J6-D	More than 100K	None
J2-F	J6-A	More than 100K	None
J2-G	J6-a	More than 100K	None
J2-S	J6-Z	More than 100K	None
J2-R	J2-M	More than 100K	None
J2-U	J2-M	More than 100K	None
J6-G	J6-H	More than 100K	None
J2-A	J2-H	Less than 1	None
J2-B	J2-J	Less than 1	None
J2-H	J6-L	Less than 1	None
J2-P	J6-N	Less than 1	None
J6-L	J6-V	Less than 1	None
J6-W	J6-K	Less than 1	None
J6-c	J6-T	Less than 1	None

70. Recalibrate potentiometer R13 as follows:

a. Install jumper lead between TB3-3 and TB3-13.

VII. B. PROCEDURE (CONTINUED)

b. Turn R13 to clockwise limit.

c. Connect ohmmeter to pins L and N on connector J4. (Open indicates K5 is de-energized while short indicates K5 is energized.)

d. Apply 38 (±0.2) volts dc (hi) to J3-A and (lo) to J3-J.

e. Turn R13 counterclockwise to point where relay K5 energizes.

f. Decrease applied voltage to 33.5 (±0.5) volts dc.

g. Remove voltage applied to J3. Relay K5 shall de-energize.

h. Reapply 33.5 (±0.5) volts dc to same points on J3. Relay K5 shall not re-energize.

i. Slowly increase voltage at J3. Relay K5 shall energize at 38.0 (±0.2) volts dc. If relay K5 does not energize within 38.0 (±0.2) volt dc range, readjust R13 as necessary and repeat steps f through i until proper R13 setting is obtained. (Turning R13 clockwise increases voltage set point. One turn will result in approximate change of 0.25 volt.)

VII. B. PROCEDURE (CONTINUED)

j. Remove voltage applied to J3.

k. Remove ohmmeter from J4.

l. Remove jumper lead between TB3-3 and TB3-13.

71. Install jumper lead between J2-L and J2-M.

72. Connect panel power cable to 115 volt ac source.

73. Set ICTC POWER switch to ON. 115V LINE POWER and PTC OPERATING indicators shall light. (Inhibit alarm if necessary.)

74. Check to insure that 115 volts ac exists between J2-U and J2-R and between J2-T and J2-M.

75. Continuity shall exist between points listed in table 7.

Table 7. Closed Circuits

FROM	TO
J2-C	J6-C
J2-E	J6-D
J2-F	J6-A
J2-G	J6-a
J2-S	J6-Z

VII. B. PROCEDURE (CONTINUED)

76. Apply 25.0 (±0.2) volts dc (hi) to J6-G and (lo) to J6-H.

77. Check to insure the following conditions exist:

a. PTC OPERATING and PTC OFF ALARM RESET indicators shall not be lighted.

b. G&N ON/PTC INHIBITED indicator shall be lighted.

c. Alarm shall not ring.

d. No voltage shall exist between J2-U and J2-R and between J2-U and J2-M.

e. No continuity shall exist between points listed in table 8.

Table 8. Open Circuits

J2-E	J6-D
J2-F	J6-A
J2-G	J6-a
J2-S	J6-Z

VII. B. PROCEDURE (CONTINUED)

78. Remove 25 volts dc applied to J6.

79. Set ICTC POWER switch to OFF.

80. Disconnect panel power cable from 115 volt ac source.

81. Remove jumper lead connected between J2-L and J2-M.

82. Connect jumper lead between J6-b and J6-F.

83. Connect 17 (±1) ohm "Load" between J6-K and J6-L, using one 10 ohm, 100 watt, resistor, one 5 ohm, 50 watt resistor, and one two ohm, 25 watt resistor.

84. Connect common input-output terminal of auto transformer (Variac) to J2-R and J2-H.

85. Connect other input terminal of variac to J2-U.

86. Connect variable output terminal of variac to J2-B.

87. Set variac for zero output.

88. Connect panel power cable to 115 volt ac source.

89. Set ICTC POWER switch to ON.

90. Adjust variac for output of 28.0 (±0.3) volts ac.

VII. B. PROCEDURE (CONTINUED)

91. Check for voltage drop of 31.5 (±1.0) volts ac across "load" resistance (added in step 83).

92. Remove panel power cable from 115 volt ac source.

93. Remove jumper lead connected between J6-b and J6-F.

94. Decrease "load" resistance to 10 (±1) ohms by removing the 5 ohm and 2 ohm resistors.

95. Connect panel power cable to 115 volt ac source.

96. Check for voltage drop of 23.5 (±1.0) volts ac across "load" resistor.

96A. Set ICTC POWER switch to OFF.

96B. Disconnect panel power cable from 115 volt ac cource.

96C. Remove "load" resistor and variac (used for testing) from battery power pack panel assembly.

VII. B. PROCEDURE (CONTINUED)

96D. Hold battery power pack panel assembly in its normal horizontal plane (position it assumes when mounted in battery power pack case) and shake vigorously. (Shaking the panel will insure no air pockets exist in the mercury pool within the ampere hour meter. Air pockets can impair proper operation of the meter.)

96E. Reinstall modified battery power pack panel assembly in battery power pack case. Insure P3 is connected to J3 and P4 is connected to J4.

96F. Transfer serial number from existing nameplate on battery power pack assembly to new nameplate, P/N 1004260-510, supplied in kit. Use 1/8 inch high character metal stamp set to imprint data.

96G. Remove existing nameplate from battery power pack assembly. Dispose of nameplate as directed in Section IX of this RIB. Retain four screws to secure new nameplate.

97. Secure new nameplate on battery power pack assembly with four screws retained in step 96G. Apply sealing and retaining compound (MIL-S-22473, grade H) to threads of four screws before installing.

98. Install jumper lead between J2-L and J2-M.

VII. B. PROCEDURE (CONTINUED)

99. Connect 20 VA load (normal inverter load) between J2-U and J2-R. 20 VA load is 775 (±1%) ohms in parallel with 3.33 (±5%) henries.

100. Connect panel power cable to 115 volt ac source.

NOTE: Inhibit alarms in following steps as necessary.

101. Set ICTC POWER switch to ON.

102. Check to insure that 115 volts ac exists between J2-U and J2-R and between J2-T and J2-M.

103. Apply 25.2 (±0.2) volt dc (hi) to J6-G and (lo) to J6-H.

104. Check to insure that 115 volts ac exists between J2-T and J2-M and zero voltage between J2-U and J2-R.

105. Disconnect panel power cable from 115 volt ac source and check for the following indications:

a. Zero voltage between J2-T and J2-M.

b. G & N ON/PTC INHIBITED indicator remains lighted.

VII. B. PROCEDURE (CONTINUED)

c. PTC OPERATING indicator not lighted.

d. No alarms ring.

e. INVERTER POWER indicator shall be lighted.

106. Remove 28 volt power applied to J6.

107. Set ICTC POWER switch to OFF.

108. Install jumper lead between J2-K and J2-N.

109. Connect panel power cable to 115 volt ac source.

110. Set ICTC POWER switch to ON.

111. Inhibit alarm bell by pressing 115V LINE POWER indicator-switch.

112. Check to insure 115 volts ac exist between J2-T and J2-M.

113. Disconnect panel power cable from 115 volt ac source and check for the following indications.

a. 115 volts ac shall not exist between J2-T and J2-M.

VII. B. PROCEDURE (CONTINUED)

b. Alarm bell shall not ring.

c. Battery voltage of 28 (+7, -3) volts dc shall exist between J2-P (hi) and J2-N (lo).

d. EMERGENCY HEATER POWER indicator-switch shall be lighted. Pressing this indicator-switch shall not turn indicator off.

114. Connect panel power cable to 115 volt ac source and check for the following indications.

a. Battery voltage of 28 (+7, -3) volts dc shall not exist between J2-P (hi) and J2-N (lo).

b. 115 volts ac shall exist between J2-T and J2-M.

c. Alarm bell shall not ring.

d. EMERGENCY HEATER POWER indicator-switch shall not be lighted.

115. Set ICTC POWER switch to OFF.

116. Disconnect panel power cable from 115 volt ac source.

VII. B. PROCEDURE (CONTINUED)

117. Remove all jumper leads.

118. Reinstall modified battery power pack cover (with cable in stored positions) on battery power pack assembly.

119. Update Acceptance Data Package as indicated in Section VIII of this RIB.

VII. PROCEDURE (CONTINUED)

C. DETAILED INSTRUCTIONS FOR MODIFICATION OF COVER, P/N 1902541. Perform modification as follows:

1. Remove cable W100, P/N 1900955, from storage location in cover and set aside.

2. Remove cable W101, P/N 1900954, from storage location in cover and modify as directed in paragraph D of Section VII in this RIB.

3. Remove dummy receptacle, P/N 1016073-183, from cover. (This dummy receptacle is located in area exposed by section view A-A in figure 8.) Retain dummy receptacle and securing hardware.

4. Enlarge one of four vacated dummy receptacle mounting holes (shown in figure 8, section view A-A) to 0.164 to 0.171 inch diameter, using number 36 twist drill.

5. Touch up inner surfaces of other three vacant mounting holes with MIL-P-8585 primer and cashmere blue enamel paint, P/N 1016194. (These three holes will not be reused for mounting parts.)

6. Locate mark and drill two 0.216 to 0.224 inch diameter through holes in top of cover as shown in figure 8. Use 7/32 size twist drill to drill holes.

VII. C. PROCEDURE (CONTINUED)

7. Locate, mark and drill three 0.201 to 0.209 inch diameter through holes in top of cover as shown in figure 8. Use number 5 size twist drill to drill holes.

8. On side of cover where four dummy receptacles are presently mounted, perform the following:

   a. Locate, mark and drill two clusters (4 holes per cluster) of 0.134 to 0.141 inch diameter through holes as shown in figure 8, section view B-B. Use number 29 size twist drill to drill holes.

   b. Locate, mark and drill one cluster (4 holes) of 0.102 to 0.108 inch diameter through holes as shown in figure 8, section view B-B. Use number 37 size twist drill to drill holes.

9. On side of cover opposite side containing four dummy receptacles, locate, mark and drill six clusters (4 holes per cluster) of 0.134 to 0.141 inch diameter through holes as shown in figure 8, section view C-C. Use number 29 size twist drill to drill holes.

VII. C. PROCEDURE (CONTINUED)

10. Using 1/8 inch rubber stamp and black marking ink, apply markings "W-189", "W-100", "W-186", "W-187", "W-188", and "W-192" to inner surface of cover in locations shown in figure. (W-186, W-187, and W-188 markings shall appear in two locations.)

11. Remove instruction foilcal, P/N 1902540, from inner surface of cover. Dispose of foilcal as directed in Section IX of this RIB.

    WARNING: Methyl-Ethyl-Ketone is toxic and flammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

    NOTE: Insure mounting surface is clean prior to applying new instruction plate.

12. Obtain instruction plate, P/N 2901442, from kit and apply methyl-ethyl-ketone to activate adhesive backing on plate. Allow activated adhesive to air dry until surface becomes tacky before performing next step.

13. Mount new instruction plate in same location as previously occupied by removed foilcal. Insure orientation of plate is as indicated in figure 8. (Bottom edge being nearest to assembly identification mark on cover.)

VII. C. PROCEDURE (CONTINUED)

14. Obtain dummy receptacle, P/N 1016073-183, and securing hardware set aside in step 3 and install on cover as shown in figure 9.

15. Obtain dummy receptacle, P/N 1016073-103, from kit and secure to cover as shown in figure 9, using four kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

16. Obtain box mounting receptacle (housing only), P/N 1897424-001, from kit and secure to cover as shown in figure 9, using four kit supplied machine screws, P/N 1006783-12, and self locking nuts, P/N 1016151-002.

17. Obtain three dummy receptacles, P/N 1016073-143, from kit and secure to cover as shown in figure 9, using 12 kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

18. Obtain three dummy receptacles, P/N 1016073-163, from kit and secure to cover as shown in figure 9, using 12 kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

19. Obtain protective cap, P/N MS3181-16C, from kit and secure end of attached chain to hole in cover which was enlarged in step 4. Reference figures 8 and 9. Use kit supplied machine screw, P/N 1006783-23, and self locking nut, P/N 1016151-006, to secure it in place.

VII. C. PROCEDURE (CONTINUED)

20. Obtain cable clamp, P/N 1010400-006, from kit and secure to cover as shown in figure 9, using two kit supplied machine screws, P/N 1006783-44, and self locking nuts, P/N 1016151-010 (AN363C1032). Insure orientation of clamp is as shown in figure 9.

21. Obtain three clamps, P/N 1016105-004, from kit and secure to three new points on cover as shown in figure 9, using three kit supplied machine screws, P/N 1006783-44, and self locking nuts, P/N AN363C1032. Insure orientation of clamps is as shown in figure 9.

22. Remove identification mark "1902541" from inner surface of cover and replace with new identification number "1902632". Marking shall be in accordance with MIL-STD-130 (ES267).

23. Obtain and install cable W192 in cover as shown in figure 9.

24. Reinstall cable W100 in cover as shown in figure 9.

25. Obtain cables W186, W187, and W188 and mount in cover as shown in figure 9.

26. Obtain cable W189 (cable W101 becomes cable W189 after it is modified per this RIB) and mount in cover as shown in figure 9.

VII. PROCEDURE (CONTINUED)

D. DETAILED INSTRUCTIONS FOR MODIFICATION OF INTERCONNECT CABLE W101 (BPP TO IMU), P/N 1900954. Perform modification as follows:

1. Cut and remove cable identification sleeve (marked 1900954) from cable. Dispose of sleeve as directed in Section IX of this RIB.
2. Loosen two screws on connectors P1 and P2.
3. Cut and remove connector P1 and P2 identification sleeves from cable. Dispose of sleeves as directed in Section IX of this RIB.
4. Extract all leads from connector P2, using Bendix 11-7880-20 extraction tool.
5. Remove connector, grommet and telescoping bushing from P2 end of cable. Dispose of removed parts as directed in Section IX of this RIB.
6. Cut and remove tubing which covers cable. Dispose of tubing as directed in Section IX of this RIB.
7. Remove P1 telescoping bushing from cable. Retain two bushings, P/N AN3420-12A and P/N AN3420-16, for later reassembly and dispose of two bushings (with smallest inner diameter) P/N AN3420-6A and P/N AN3420-8A, as directed in Section IX of this RIB.

VII. D. PROCEDURE (CONTINUED)

8. Remove strain relief clamp, connector back shell and grommet insert from rear of connector P1 to permit access to P1 solder wells.
9. Unsolder lead A2 from P1-B and resolder to P1-Z.
10. Obtain leads A10 through A13 from kit lead set and install in cable as indicated in table 9. Accessory items are furnished in kit supplied connector, P/N 1897422-004.

Table 9. Cable Lead Additions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Strip Insul.	Tin	Accessory Item P/N	Remarks
A10	P1-G	P2-G	0.30 0.22	Yes No	MS3193A-20A	See note 1
A11	P1-H	P2-H	0.30 0.22	Yes No	MS3193A-20A	See note 1
A12	P1-F	P2-F	0.30 0.22	Yes No	MS3193A-20A	See note 1
A13	P1-b	P2-b	0.30 0.22	Yes No	MS3193A-20A	See note 1

Note 1 - Extract contact from applicable positions in kit supplied connector, using Bendix 11-7880-20 extraction tool. Crimp contact on lead using Buchanan MS3191-A crimping tool with Buchanan MS3191-20 positioner.

VII. D. PROCEDURE (CONTINUED)

11. Reinstall grommet insert and connector back shell on rear of connector P1.
12. Obtain zipper tubing, P/N 1902621-005, from kit and install on cable.
13. Obtain P1 identification sleeve, P/N 2901475, from kit and install on cable at P1. Position sleeve such that lettering reads away from P1 and that end of sleeve will lie under strain relief clamp. Heat shrink sleeve in place.
14. Reinstall at connector P1, two telescoping bushings, P/N AN3420-12A and P/N AN3420-16, removed and retained in step 7.
15. Secure strain relief clamp in place on cable. Insure adequate slack exists in cable leads and that bushings and sleeves are properly positioned in strain relief clamp before tightening screws.
16. Obtain cable identification sleeve, P/N 1902621-004, from kit. If sleeve has not been marked with identification number "2901446", mark it with this identification at this time. Marking should be white and 0.25 inch high.

VII. D. PROCEDURE (CONTINUED)

17. Slide cable identification sleeve, P/N 1902621-004, on cable to approximate center location and heat shrink in place.
18. Obtain P2 identification sleeve, P/N 2901199, from kit and position on P2 end of cable such that lettering reads away from P2. Do not heat shrink in place at this time.
19. Obtain strain relief grommet, P/N 1016282-16, from kit and slide on cable.
20. Install cable leads in kit supplied connector, P/N 1897422-004, (new connector P2) as indicated in table 10.

A10	G
A11	H
A12	F
A13	b

VII. D. PROCEDURE (CONTINUED)

21. Fill unused holes in connector P2 with excess contacts obtained in step 20.

22. Fill unused holes in connector P2 grommet with plug end seals, P/N 1897370-001, supplied in kit.

23. Position P2 identification sleeve such that end of sleeve will lie under strain relief clamp on P2 connector. Heat shrink sleeve in place.

24. Position strain relief grommet under P2 connector strain relief clamp.

25. Secure strain relief clamp in place on cable. Insure adequate slack exists in cable leads before tightening screws.

26. Check for an indication of less than one ohm between the points listed in table 11.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.
2. Make necessary entry in the Equipment Inventory Record.
3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

B. The significant part number changes resulting from this modification are as follows:

Name	Pre-modification P/N	Post-modification P/N
Battery Power Pack Assembly	1900011-031	1900011-041
Battery Power Pack Panel Assembly	1902249-021	1902630-011
Front Panel	1902179	1902629
Chassis	1902135	1902631
Wiring Harness A	1902539	1902620

VIII. MODIFICATION DESIGNATION (CONTINUED)

Name	Pre-modification P/N	Post-modification P/N
Wire List AA	1902190	1902622
Battery Power Pack Cover	1902541	1902632
*Cable Interconnect W101 (BPP to IMU)	1900954	2901446

*Cable name changes to "Cable Interconnect W189 (BPP to IMU)" upon completion of modification.

IX. DISPOSITION OF PARTS REMOVED

A. One connector-plug, P/N MS3126F18-32SX, (1897092-322) and two fuses, P/N F02A32V15AS, (1897099-117) shall be returned to stock as spares per AC Electronics, Logistics (Department 38-09) direction.

B. One resistor, P/N RE75G2490, (1896892-327) shall be transferred to full custody of the government via DD543 form (Inventory Schedule).

C. Scrap all parts not listed above, via AC Electronics form MIL-127 or equivalent.

Revision A

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of Battery Power Pack Assembly, P/N 1900011-031. This modification will add the capability of using this assembly with Block II/LEM units, in conjunction with PTC P/N 1900496 as well as PTC P/N 2900060.

II. AUTHORITY

This retrofit is authorized by Block II/LEM contract NAS9-497 (CCA 497-0169).

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Battery Power Pack Assembly	1900011-031	1900011-041

IV. PRIORITY CHANGES

Not applicable.

Sheet 3 of 66

TDRR
Revision A

V. RELATED CHANGES

RIB 0102110 and RIB 0102111.

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102205, consisting of the following items is required to modify a Battery Power Pack Assembly, P/N 1900011-031.

Qty	Part Number	Description
1	0102092	Retrofit Instruction Bulletin
1	1016024-001	Relay, armature
1	1015982-006	Relay, armature
1	1897277-001	Rectifier bridge
1	1897261	Comparator
1	1897337-101	Light indicator assembly
1	1015982-007	Relay, armature
2	F02B32V15AS	Fuse (1897099-133)
1	1004260-510	Nameplate
1	1902621	Lead set
1	1897425	Transformer
1	CL25BJ151UP3	Capacitor (1897081-320)
2	1006783-45	Screw, button head
1	2901438	Component board assembly
4	1015860-001	Spacer
10	1012525-004	Nut
4	1006783-24	Screw, button head
4	AN960C6L	Washer, flat (1897006-036)

Sheet 4 of 66
Part No. 0102092
Date: 3 MAY 66
TDRR
Revision B

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
4	MS35338-79	Washer, lock
6	1006783-22	Screw, button head
2	1010676-1	Terminal, stud, insulated
2	1010618-13	Screw, button head, self locking
7	AN363C1032	Nut, self locking (1016151-010)
4	1016006-002	Splice reducer
2	1016006-003	Splice reducer
4	1010490-258	Sleeving, electrical insulation
2	1010490-256	Sleeving, electrical insulation
1	1015818-616	Contact, socket
27	1015864-135	Sleeving, electrical insulation
25	1015864-137	Sleeving, electrical insulation
11	1015864-139	Sleeving, electrical insulation
9	1015864-138	Sleeving, electrical insulation
2	1016281-181	Contact, socket
1	2901441	Bracket assembly (inseparable)
1	2901442	Plate, instruction
1	1902626	Decal, functional area
1	1010490-200	Sleeving, electrical insulation
1	1016006-001	Splice reducer
1	2901443	Cable W186
1	2901444	Cable W187
1	2901445	Cable W188
1	2901447	Cable W192
32	1006783-19	Screw, button head
4	MS35338-78	Washer, lock
1	1897422-004	Connector, electrical
1	2901199	Sleeve, identification

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	2901475	Sleeve, identification
9	1897370-001	Plug, end seal
1	1016282-16	Grommet, connector strain relief
3	1016073-143	Dummy receptacle
3	1016073-163	Dummy receptacle
1	1016073-103	Dummy receptacle
1	1897424-001	Box mounting receptacle (housing only)
1	1010400-006	Cable clamp
1	MS3181-16C	Cap, protective
1	2901533	Guard, switch
2	MS35200-15	Screw, flat head
3	1016105-004	Clamp
28	1016151-004	Nut, self locking
5	1006783-44	Screw, machine
4	1016151-002	Nut, self locking
1	1006783-23	Screw, machine
1	1036151-006	Nut, self locking
4	1006783-12	Screw, machine

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
1	*ACSP 63L12A	Inductor, 3.33 (±3%) henries 300 ma ac-dc, 1 ohm max.
1	*Dale, type RH25 (Allied Catalog No.660, stock no. 26Z360C)	Resistor, 600 (±1%) ohm, 25 watt

*or equivalent

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Dale, type RH10 (Allied Catalog no. 660, stock no. 26Z352C)	Resistor, 175 (±1%) ohm, 10 watt
AR	N/A	Primer (MIL-P-8585)
AR	N/A	Paint, semi-gloss enamel, light gray (FED-STD-595 color 26440) (TT-E-529, class B)
AR	N/A	Varnish (MIL-V-6894A, unreduced)
1	*Schwaab Stamp & Seal Co., type AAG-0	Rubber stamp, 1/8 inch, thirteen band, alpha-numerical
AR	N/A	Lacquer thinner (MS35626)
AR	N/A	Clear lacquer (MIL-L-73A)
AR	N/A	Black marking ink
AR	N/A	Solder (QQ-S-571, SN60WRAP)
1	*Master Appliance, G7673A	Heat gun (300°F)
1	Buchanan MS3191-A	Crimping tool
1	Bendix 11-7758	Positioner
1	Bendix 11-8107-16	Insertion tool
1	Bendix 11-7880-16	Extraction tool
1	Burndy Y10MRF-4	Crimping tool
AR	N/A	Lacing & tying tape (MIL-T-713C, black, type P, class 2)

*or equivalent

VI. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Greenfield Steel Stamp Works	Metal stamp set, 1/8 inch alphanumerical
AR	N/A	Sealing & retaining compound (MIL-S-22473, grade H & HV)
1	Buchanan MS3191-20	Positioner
AR	MIL-I-631	Filler tape, type F, form T, (black) grade A, class I, 0.62 inch wide, 0.020 inch thick
1	Any hi-speed	7/32 size twist drill
1	Any hi-speed	Number 5 twist drill
1	Any hi-speed	Number 29 twist drill
1	Any hi-speed	Number 37 twist drill
1	Any hi-speed	Number 39 twist drill
1	Any hi-speed	1/8 size twist drill
1	*Cleveland Twist Drill Co.	80° countersink
1	*General Radio Co, model W5MT3	Auto-transformer (Variac)
AR	N/A	Methy-Ethyl-Ketone (TT-M-261)
1	*Ohmite (Allied Catalog no. 660, Stock no. 25Z795C)	Resistor, 10 ohm (±5%), 100 watt
1	*Ohmite (Allied Catalog no. 660 Stock no. 25Z783C)	Resistor, 5 ohm (±5%), 50 watt
1	*Ohmite (Allied Catalog no. 660, Stock no. 25Z776C)	Resistor, 2 ohm (±5%), 25 watt

*or equivalent

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

3. Where marking is specified, hand marking is acceptable.

4. Use heatsink device when unsoldering or soldering near semi-conductors.

5. Ink markings:

   a. Markings to be removed should be removed using lacquer thinner.

   b. New markings shall be covered with a coat of clear flat lacquer after ink has dried.

6. During this modification, lacing may be cut as required to accomplish necessary work. Spot ties will be added after all conductor rework has been completed.

VII. A. PROCEDURE (CONTINUED)

7. Delete conductors from wiring harness, when instructed, by one of the two following methods:

   a. Method One. (preferred)

      (1) Disconnect conductor from its termination points.

      (2) Clip attached termination hardware and/or exposed tinned tip(s) from all conductor ends and discard.

      (3) Pull conductor out of harness at most convenient point and discard.

   b. Method Two.

      (1) Disconnect conductor from its termination points.

      (2) Clip attached termination hardware and/or exposed tinned tip(s) from all conductor ends and discard.

      (3) Apply a drop of blue glyptal to severed ends of conductor.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Remove cover, P/N 1902541, from battery power pack assembly and modify as directed in paragraph C of Section VII in this RIB.

2. Open access door, P/N 1900471, on battery power pack assembly and disconnect P3 and P4 from their respective mating connectors.

3. Remove battery power pack panel assembly, P/N 1902249-021, from battery power pack assembly and set on work bench.

4. Remove two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure front panel, P/N 1902179, to (right side) chassis support, P/N 1900475. Retain screws and nuts.

5. Remove six machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure front panel to chassis. Retain screws and nuts.

6. Remove two(2) machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure meter bracket, P/N 1900480, to chassis. Retain screws and nuts. (Removal of CR5 from meter bracket and wires from E1 on chassis will facilitate separation of chassis and panel assemblies.)

VII. B. PROCEDURE (CONTINUED)

NOTE: Maneuver front panel away from chassis as required to perform following steps. Care must be taken, however, not to put undue strain on wiring and wiring connections.

CAUTION: When cutting holes in front panel and chassis during this modification, take the following necessary measures to;

1. Insure metal chips, filing and etc are not allowed to fall into or on wiring, switches and other components.

2. Insure wiring is pushed aside as necessary to prevent drilling into them.

7. Cut three new holes in front panel, P/N 1902179, as shown in figure 1. Use 1/8 size twist drill to drill two holes near ICTC POWER switch. These two holes shall be countersunk as indicated in figure 1.

8. Touch up bare metal surfaces in new holes with MIL-P-8585 primer and TT-E 529, class B, semi-gloss enamel, light gray (color 26440 of FED-STD-595) paint.

9. Obtain decal, P/N 1902626, from kit and install on front panel as shown in figure 2. Apply a bead of varnish (MIL-V-6894A unreduced), overlapping all edges 1/4 inch minimum on decal.

VII. B. PROCEDURE (CONTINUED)

10. Obtain switch guard, P/N 2901533, from kit and secure to front panel over ICTC POWER switch with two kit supplied flat head screws, P/N MS35200-15. Apply sealing and retaining compound MIL-S-22473, grade HV to threads of screws before installing.

11. Mark "DS10" on backside of front panel in location shown in figure 3. New marking should be 0.125 inch high, color black per ND 1002019.

12. Remove identification number "1902179" stamped on back side of front panel and replace with new identification number "1902629". New identification shall be in accordance with MIL-STD-130 (ES267).

13. Obtain light-indicator assembly, P/N 1897337-101, from kit and mount on front panel as indicated in the following steps while referencing figure 4.

    a. Using fingernail slots on sides, pull lens assembly out approximately 5/8 inch. (Reference figure 4, view A.)

    b. Rotate lens assembly 90 degrees. (Reference figure 4, view B.)

    c. Push lens in to release tension on index keys and then pull complete assembly out and set aside.

VII. B. PROCEDURE (CONTINUED)

d. Unscrew two screws until captive nuts reach the rear of their travel range and remove cover. (One screw and captive nut is shown in figure 4, view C.)

e. Insert indicator assembly through panel cutout from the front of panel. (Reference figure 4, view D.)

f. From rear of panel, slip cover over indicator assembly until it fits snugly against rear of panel. (Reference figure 4, view D.)

g. Tighten two screws (with attached captive nuts) to draw cover up firmly to rear of panel. (Reference figure 4, view C.)

h. Insert lens and lamp assembly (see figure 4, view E) into indicator assembly so lamp board slot is aligned with lamp board index.

i. Rotate lens assembly 90 degrees (see figure 4, view F) and push assembly into indicator assembly.

14. Remove three machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, which secure (right side) chassis support, P/N 1900475, to chassis. Retain screws and nuts for later use. Remove (right side) chassis support, P/N 1900475, and dispose of as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

14A. Remove leads A26 and A172 connected to resistor R1.

14B. Remove resistor R1 from chassis. Dispose of resistor and securing screws and nuts as directed in Section IX of this RIB.

14C. Remove marking for R1 (R1 and terminal designations 1 and 2) stamped on chassis, using lacquer thinner.

CAUTION: When performing the following steps, use care to insure CR6, R13 and leads attached to R13 are not damaged. These parts will be removed and installed on a new bracket.

14D. Remove leads A23, A29, A167, and A169 from E9. (E9 is located on electronics components assembly, P/N 1902193.)

14E. Remove lead A166 from E10.

15. Remove lead A171 from E11.

16. Unsolder lead A170 from CR6-C.

17. Remove electronics components assembly, P/N 1902193, from chassis by removing two securing machine screws and self locking nuts. Dispose of removed screws and self locking nuts as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

18. Unsolder (do not cut) green and red leads connected to E10.

19. Unsolder (do not cut) yellow lead connected to CR6-A.

20. Remove resistor R13 from electronics components assembly, P/N 1902193. Retain mounting hardware.

21. Obtain bracket, P/N 2901441, from kit and mount R13 (removed in step 20) on bracket as shown in figure 5. Use original mounting hardware to secure R13 to bracket.

22. Remove diode CR6 from electronics components assembly, P/N 1902193.

23. Utilize original mounting hardware to secure CR6 on new bracket as shown in figure 5.

24. Dispose of electronics components assembly, P/N 1902193, (less R13 and CR6) as directed in Section IX of this RIB.

25. Locate, mark and cut two new holes in chassis as shown in figure 6. Use new bracket, P/N 2901441, as a template for locating two new holes. Do not use bracket for a template when drilling, however. Use 7/32 size twist drill for drilling operation.

VII. B. PROCEDURE (CONTINUED)

26. Touch up bare metal surfaces in two new holes in chassis with MIL-P-8585 primer.

27. Remove identification number "1902135" and associated revision marking and replace with new identification number "1902631". New marking shall be in accordance with MIL-STD-130.

28. Remove leads listed in table 1 from wiring harness A.

Table 1. Wiring Harness A Lead Deletions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Remarks
A23	CR2-C	E9	Previously removed from E9
A26	K6-6	R1-1	Previously removed from R1
A29	CR1-C	E9	Previously removed from E9
A122	T3-3	XDS3-A	
A137	XDS3-B	XDS5-A	
A138	XDS4-B	XDS5-B	
A166	K6-5	E10	Previously removed from E10
A167	J4-L	E9	Cut off at J4-L. E9 end previously removed
A169	K5-1	E9	Previously removed from E9
A170	XF5-1	CR6-C	Previously removed from CR6
A171	K6-2	E11	Previously removed from E11
A172	TB1-11	R1-2	Previously removed from R1

VII. B. PROCEDURE (CONTINUED)

29. Obtain transformer (T4), P/N 1897425, from kit and secure to new bracket, P/N 2901441, as shown in figure 5, with four kit supplied button head screws, P/N 1006783-22, lock washers, P/N MS35338-79, and flat washers, P/N AN960C6L.

30. Obtain relay (K13), P/N 1016024-001, from kit and secure to new bracket as shown in figure 5, with two kit supplied button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004.

31. Obtain comparator (AR1), P/N 1897261, from kit and secure to new bracket as shown in figure 5, with four kit supplied button head screws, P/N 1006783-19, and lock washers, P/N MS35338-78.

32. Obtain rectifier bridge (CR7), P/N 1897277-001, from kit and secure to new bracket as shown in figure 5.

33. Obtain relay (K14), P/N 1015982-006, from kit and secure to new bracket as shown in figure 5, with two kit supplied self locking nuts, P/N 1012525-004.

34. Obtain relay (K12), P/N 1015982-007, from kit and secure to new bracket as shown in figure 5, with two kit supplied self locking nuts, P/N 1012525-004.

VII. B. PROCEDURE (CONTINUED)

35. Obtain component board assembly (TB3), P/N 2901438, from kit and secure to new bracket as shown in figure 5, with four kit supplied spacers, P/N 1015860-001, self locking nuts, P/N 1012525-004, and button head screws, P/N 1006783-24.

36. Obtain one terminal stud (E15), P/N 1010676-1, from kit and secure to new bracket as shown in figure 5, with kit supplied button head screw, P/N 1010618-13.

37. Obtain one terminal stud (E16), P/N 1010676-1, from kit and secure to new bracket as shown in figure 5, with kit supplied button head screws, P/N 1010618-13.

38. Obtain capacitor (C2), P/N CL25BJ151UP3, from kit and insert in retaining clip as shown in figure 5, such that positive end is nearest E15.

39. Temporarily connect (mechanically) positive lead of C2 to E15 and negative lead to E16.

40. Temporarily connect (mechanically) the free end of yellow lead attached to R13, to TB3-9. Lead should be cut to required length, have insulation stripped 0.30 inch and tinned prior to connecting.

VII. B. PROCEDURE (CONTINUED)

41. Temporarily connect (mechanically) the free end of red lead and green lead attached to R13, to TB3-13. Leads should be cut to required length, have insulation stripped 0.30 inch and tinned prior to installing.

42. Install new wire list AA leads furnished in kit lead set, as indicated in table 2. Accessory items listed in table 2 are also furnished in kit. (Reference figure 7 for terminal identifications.)

A144	K2-D2	**K3-D2	0.30	Yes	1015864-135

*Combine with lead A120 at this point.
**Another lead (A189) will be added to this point later.

VII. B. PROCEDURE (CONTINUED)

45. Remove leads A71, A153, and A160 from E5 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

46. Remove leads A72, A154, and A161 from E6 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

47. Remove leads A73, A155, and A162 from E7 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

48. Remove leads A74, A156, and A163 from E8 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

49. Remove leads A82, A151, and A158 from E3 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

50. Obtain new wiring harness A leads from kit lead set and install as indicated in table 4. (Notes referenced in the remarks column in table 4 can be found at the rear of the table.) See figure 7 for terminal identification.

Table 4. Wiring Harness A Lead Additions

Note 1 - Utilize blank contact in connector to make connection at this point.
Note 2 - Connection to this point will be accomplished later.
Note 3 - Use Buchanan MS3191-1 crimping tool with Bendix 11-7758 positioner, extraction tool Bendix 11-7880-16, and insertion tool Bendix 11-8107-16 as required.
Note 4 - Do not solder as another lead (A202) will be connected later.

VII. B. PROCEDURE (CONTINUED)

Table 4. Wiring Harness A Lead Additions (continued)

Note 5 - Combine with leads A36, A111, and A168 at this point.
Note 6 - Remove lead A142 from K9-1 before connecting lead A214. Lead A142 will be reconnected to a new point later.

51. Obtain four electrical insulation sleeves, P/N 1010490-258, two electrical insulation sleeves, P/N 1010490-256, and one electrical insulation sleeve, P/N 1010490-200, and mark with the designation indicated in table 5. (Mark by hand with black ink.)

Table 5. Marking for Sleeves

Qty	Part Number	Identification Mark
1	1010490-258	E12
1	1010490-258	E13
1	1010490-258	E14
1	1010490-256	E17
1	1010490-258	E18
1	1010490-200	E19
1	1010490-256	E20

VII. B. PROCEDURE (CONTINUED)

52. Route loose ends of leads A142, A194, and A214 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-002, as follows:

    a. Eliminate excessive length and strip insulation 0.30 inch on three leads. (A214 will be crimped in small end of splice reducer.)

    b. Insert leads A142 and A194 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    c. Obtain sleeve marked E18 (reference step 51) and slide over loose end of lead A214.

    d. Insert lead A214 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    e. Slide sleeve marked E18 over crimped splice reducer and heat shrink in place.

53. Route loose ends of leads A82, A151, A158, and A179 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-003, as follows:

VII. B. PROCEDURE (CONTINUED)

    a. Eliminate excessive length and strip insulation 0.30 inch on four leads. (A82 and A179 will be crimped in small end of splice reducer.)

    b. Insert leads A151 and A158 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    c. Obtain sleeve marked E17 (reference step 51) and slide over loose end of leads A82 and A179.

    d. Insert leads A82 and A179 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    e. Slide sleeve marked E17 over crimped splice reducer and heat shrink in place.

54. Route loose ends of leads A72, A74, and A201 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1006006-002, as follows:

    a. Eliminate excessive length and strip insulation 0.30 inch on three leads.

    b. Insert leads A72, A74, and A201 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

VII. B. PROCEDURE (CONTINUED)

    c. Obtain sleeve marked E14 (reference step 51) and slide over splice reducer and heat shrink in place.

55. Route loose ends of leads A154, A156, A161, A163, and A200 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer, P/N 1016006-002, as follows:

    a. Eliminate excessive length and strip insulation 0.30 inch on five leads. (A200 will be crimped in small end of splice reducer.)

    b. Insert leads A154, A156, A161, and A163 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    c. Obtain sleeve marked E13 (reference step 51) and slide over loose end of lead A200.

    d. Insert lead A200 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    e. Slide sleeve marked E13 over crimped splice reducer and heat shrink in place.

VII. B. PROCEDURE (CONTINUED)

56. Route loose ends of leads A71, A73, A153, A155, A160, A162, and A199 to common meeting place on wiring harness A. Join these leads in kit supplied splice reducer P/N 1016006-002, as follows:

    a. Eliminate excessive length and strip insulation 0.30 inch on seven leads. (A199, A71, and A73 will be crimped in small end of splice reducer.)

    b. Insert leads A153, A155, A160, and A162 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    c. Obtain sleeve marked E12 (reference step 51) and slide over loose end of leads A199, A71, and A73.

    d. Insert leads A199, A71, and A73 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    e. Slide sleeve marked E12 over crimped splice reducer and heat shrink in place.

57. Remove leads A143, A150, and A157 from E2 by clipping off leads as close as possible to body of splice reducer. Dispose of splice reducer and associated sleeve as directed in Section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

58. Route loose end of lead A215 to former E2 location on wiring harness A. Join leads A143, A150, A157, and A215 in kit supplied splice reducer, P/N 1016006-001, as follows:

    a. Eliminate excessive length from lead A215. (A215 will be crimped in large end of splice reducer.)

    b. Strip insulation on all four leads 0.30 inch.

    c. Insert A150, A157, and A215 in large barrel end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    d. Obtain sleeve marked E19 (reference step 51) and slide over loose end of lead A143.

    e. Insert lead A143 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    f. Slide sleeve marked E19 over crimped splice reducer and heat shrink in place.

59. Route loose ends of leads A207, A208, A209, and A211 to common meeting place on wiring harness A. Join these leads in kit supplied reducer, P/N 1016006-003, as follows:

VII. B. PROCEDURE (CONTINUED)

    a. Eliminate excessive length and strip insulation 0.30 inch on four leads. (A209 will be crimped in small end of splice reducer.)

    b. Insert leads A207, A208, and A211 in large end (B) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    c. Obtain sleeve marked E20 (reference step 51) and slide over loose end of lead A209.

    d. Insert lead A209 in small barrel end (BB) of splice reducer and crimp in place with Burndy Y10MRF-4 crimping tool.

    e. Slide sleeve marked E20 over crimped splice reducer and heat shrink in place.

60. Spot tie wiring harness A as required in accordance with ND 1002032,using black lacing tape.

61. Remove wiring harness A identification tag (marked "1902539") from harness. Dispose of identification tag as directed in Section IX of this RIB.

62. Obtain identification band, P/N 1016128-021, from kit lead set. If band has not been marked with "1902620" identification number, mark it with this identification at this time.

VII. B. PROCEDURE (CONTINUED)

63. Secure new identification band to wiring harness A in same location occupied by old identification tag removed in step 61. Use black lacing tape to secure it in place.

64. Remove identification "ASSY 1902249-021" and replace it with "ASSY 1902630-011". Marking shall be in accordance with MIL-STD-130 (ES267).

65. Secure front panel to chassis with six machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, removed and retained in step 5.

66. Secure front panel to new bracket, P/N 2901441, with two machine screws, P/N 1006783, and self locking nuts, P/N AN363C1032, supplied in kit.

67. Secure meter bracket, P/N 1900480, to chassis with two machine screws, P/N 1006783, and self locking nuts,P/N AN363C1032, removed and retained in step 6. (Reinstall CR5 and wires on E1 if these items were removed in step 6.)
68. Remove SPARE 15 AMP and BATTERY 15 AMP fuses and replace with two kit supplied fuses, P/N F02B32V15AS.

VII. B. PROCEDURE (CONTINUED)

68A. Locate Ampere Hour Meter, P/N 1900314, M1, and remove four (4) screws holding plastic dust cover to meter. Retain screws.

68B. Carefully remove plastic dust cover to ensure no damage occurs to gasket.

68C. Lift red pointer until disengaged from inner dial.

68D. Rotate inner dial to gear tooth closest to 30 and engage red pointer to inner dial.

68E. Carefully replace plastic dust cover removed in step 68B using screws removed in step 68A.

69. Perform continuity - resistance checks listed in table 6.

VII. B. PROCEDURE (CONTINUED)

Table 6. Continuity - Resistance Checks

FROM	TO	Indication (ohms)	Conditions
J2-K	J6-d	Less than 1	None
J2-K	J6-d	More than 100K	Press S6 (EMERGENCY HEATER POWER PRESS TO TURN OFF)
J2-C	J6-C	More than 100K	None
J2-E	J6-D	More than 100K	None
J2-F	J6-A	More than 100K	None
J2-G	J6-a	More than 100K	None
J2-S	J6-Z	More than 100K	None
J2-R	J2-M	More than 100K	None
J2-U	J2-M	More than 100K	None
J6-G	J6-H	More than 100K	None
J2-A	J2-H	Less than 1	None
J2-B	J2-J	Less than 1	None
J2-H	J6-L	Less than 1	None
J2-P	J6-N	Less than 1	None
J6-L	J6-V	Less than 1	None
J6-W	J6-K	Less than 1	None
J6-c	J6-T	Less than 1	None

70. Recalibrate potentiometer R13 as follows:

a. Install jumper lead between TB3-3 and TB3-13.

VII. B. PROCEDURE (CONTINUED)

b. Turn R13 to clockwise limit.

c. Connect ohmmeter to pins L and N on connector J4. (Open indicates K5 is de-energized while short indicates K5 is energized.)

d. Apply 38 (±0.2) volts dc (hi) to J3-A and (lo) to J3-J.

e. Turn R13 counterclockwise to point where relay K5 energizes.

f. Decrease applied voltage to 33.5 (±0.5) volts dc.

g. Remove voltage applied to J3. Relay K5 shall de-energize.

h. Reapply 33.5 (±0.5) volts dc to same points on J3. Relay K5 shall not re-energize.

i. Slowly increase voltage at J3. Relay K5 shall energize at 38.0 (±0.2) volts dc. If relay K5 does not energize within 38.0 (±0.2) volt dc range, readjust R13 as necessary and repeat steps f through i until proper R13 setting is obtained. (Turning R13 clockwise increases voltage set point. One turn will result in approximate change of 0.25 volt.)

VII. B. PROCEDURE (CONTINUED)

j. Remove voltage applied to J3.

k. Remove ohmmeter from J4.

l. Remove jumper lead between TB3-3 and TB3-13.

71. Install jumper lead between J2-L and J2-M.

72. Connect panel power cable to 115 volt ac source.

73. Set ICTC POWER switch to ON. 115V LINE POWER and PTC OPERATING indicators shall light. (Inhibit alarm if necessary.)

74. Check to insure that 115 volts ac exists between J2-U and J2-R and between J2-T and J2-M.

75. Continuity shall exist between points listed in table 7.

Table 7. Closed Circuits

FROM	TO
J2-C	J6-C
J2-E	J6-D
J2-F	J6-A
J2-G	J6-a
J2-S	J6-Z

VII. B. PROCEDURE (CONTINUED)

76. Apply 25.0 (±0.2) volts dc (hi) to J6-G and (lo) to J6-H.

77. Check to insure the following conditions exist:

a. PTC OPERATING and PTC OFF ALARM RESET indicators shall not be lighted.

b. G&N ON/PTC INHIBITED indicator shall be lighted.

c. Alarm shall not ring.

d. No voltage shall exist between J2-U and J2-R and between J2-U and J2-M.

e. No continuity shall exist between points listed in table 8.

Table 8. Open Circuits

FROM	TO
J2-C	J6-C
J2-E	J6-D
J2-F	J6-A
J2-G	J6-a
J2-S	J6-Z

VII. B. PROCEDURE (CONTINUED)

78. Remove 25 volts dc applied to J6.

79. Set ICTC POWER switch to OFF.

80. Disconnect panel power cable from 115 volt ac source.

81. Remove jumper lead connected between J2-L and J2-M.

82. Connect jumper lead between J6-b and J6-F.

83. Connect 17 (±1) ohm "Load" between J6-K and J6-L, using one 10 ohm, 100 watt, resistor, one 5 ohm, 50 watt resistor, and one two ohm, 25 watt resistor.

84. Connect common input-output terminal of auto transformer (Variac) to J2-R and J2-H.

85. Connect other input terminal of variac to J2-U.

86. Connect variable output terminal of variac to J2-B.

87. Set variac for zero output.

88. Connect panel power cable to 115 volt ac source.

89. Set ICTC POWER switch to ON.

90. Adjust variac for output of 28.0 (±0.3) volts ac.

VII. B. PROCEDURE (CONTINUED)

91. Check for voltage drop of 31.5 (±1.0) volts ac across "load" resistance (added in step 83).

92. Remove panel power cable from 115 volt ac source.

93. Remove jumper lead connected between J6-b and J6-F.

94. Decrease "load" resistance to 10 (±1) ohms by removing the 5 ohm and 2 ohm resistors.

95. Connect panel power cable to 115 volt ac source.

96. Check for voltage drop of 23.5 (±1.0) volts ac across "load" resistor.

96A. Set ICTC POWER switch to OFF.

96B. Disconnect panel power cable from 115 volt ac cource.

96C. Remove "load" resistor and variac (used for testing) from battery power pack panel assembly.

VII. B. PROCEDURE (CONTINUED)

96D. Hold battery power pack panel assembly in its normal horizontal plane (position it assumes when mounted in battery power pack case) and shake vigorously. (Shaking the panel will insure no air pockets exist in the mercury pool within the ampere hour meter. Air pockets can impair proper operation of the meter.)

96E. Reinstall modified battery power pack panel assembly in battery power pack case. Insure P3 is connected to J3 and P4 is connected to J4.

96F. Transfer serial number from existing nameplate on battery power pack assembly to new nameplate, P/N 1004260-510, supplied in kit. Use 1/8 inch high character metal stamp set to imprint data.

96G. Remove existing nameplate from battery power pack assembly. Dispose of nameplate as directed in Section IX of this RIB. Retain four screws to secure new nameplate.

97. Secure new nameplate on battery power pack assembly with four screws retained in step 96G. Apply sealing and retaining compound (MIL-S-22473, grade H) to threads of four screws before installing.

98. Install jumper lead between J2-L and J2-M.

VII. B. PROCEDURE (CONTINUED)

99. Connect 20 VA load (normal inverter load) between J2-U and J2-R. 20 VA load is 775 (±1%) ohms in parallel with 3.33 (±5%) henries.

100. Connect panel power cable to 115 volt ac source.

NOTE: Inhibit alarms in following steps as necessary.

101. Set ICTC POWER switch to ON.

102. Check to insure that 115 volts ac exists between J2-U and J2-R and between J2-T and J2-M.

103. Apply 25.2 (±0.2) volt dc (hi) to J6-G and (lo) to J6-H.

104. Check to insure that 115 volts ac exists between J2-T and J2-M and zero voltage between J2-U and J2-R.

105. Disconnect panel power cable from 115 volt ac source and check for the following indications:

a. 1 volt max between J2-T and J2-M. with a 1K resistor connected between these two pins.
b. G & N ON/PTC INHIBITED indicator remains lighted.

VII. B. PROCEDURE (CONTINUED)

c. PTC OPERATING indicator not lighted.

d. Bell shall ring; inhibit bell by pressing 115V LINE POWER indicator-switch.

e. INVERTER POWER indicator shall be lighted.

106. Remove 28 volt power applied to J6.

107. Set ICTC POWER switch to OFF.

108. Install jumper lead between J2-K and J2-N.

109. Connect panel power cable to 115 volt ac source.

110. Set ICTC POWER switch to ON.

111. Inhibit alarm bell by pressing 115V LINE POWER indicator-switch.

112. Check to insure 115 volts ac exist between J2-T and J2-M.

113. Disconnect panel power cable from 115 volt ac source and check for the following indications.

a. 115 volts ac shall not exist between J2-T and J2-M.

VII. B. PROCEDURE (CONTINUED)

b. Alarm bell shall not ring.

c. Battery voltage of 28 (+7, -3) volts dc shall exist between J2-P (hi) and J2-N (lo).

d. EMERGENCY HEATER POWER indicator-switch shall be lighted. Pressing this indicator-switch shall not turn indicator off.

114. Connect panel power cable to 115 volt ac source and check for the following indications.

a. Battery voltage of 28 (+7, -3) volts dc shall not exist between J2-P (hi) and J2-N (lo).

b. 115 volts ac shall exist between J2-T and J2-M.

c. Alarm bell shall not ring.

d. EMERGENCY HEATER POWER indicator-switch shall not be lighted.

115. Set ICTC POWER switch to OFF.

116. Disconnect panel power cable from 115 volt ac source.

VII. B. PROCEDURE (CONTINUED)

117. Remove all jumper leads.

118. Reinstall modified battery power pack cover (with cable in stored positions) on battery power pack assembly.

119. Update Acceptance Data Package as indicated in Section VIII of this RIB.

VII. PROCEDURE (CONTINUED)

C. DETAILED INSTRUCTIONS FOR MODIFICATION OF COVER, P/N 1902541. Perform modification as follows:

1. Remove cable W100, P/N 1900955, from storage location in cover and set aside.

2. Remove cable W101, P/N 1900954, from storage location in cover and modify as directed in paragraph D of Section VII in this RIB.

3. Remove dummy receptacle, P/N 1016073-183, from cover. (This dummy receptacle is located in area exposed by section view A-A in figure 8.) Retain dummy receptacle and securing hardware.

4. Enlarge one of four vacated dummy receptacle mounting holes (shown in figure 8, section view A-A) to 0.164 to 0.171 inch diameter, using number 19 twist drill.

5. Touch up inner surfaces of other three vacant mounting holes with MIL-P-8585 primer and cashmere blue enamel paint, P/N 1016194. (These three holes will not be reused for mounting parts.)

6. Locate mark and drill two 0.216 to 0.224 inch diameter through holes in top of cover as shown in figure 8. Use 7/32 size twist drill to drill holes.

VII. C. PROCEDURE (CONTINUED)

7. Locate, mark and drill three 0.201 to 0.209 inch diameter through holes in top of cover as shown in figure 8. Use number 5 size twist drill to drill holes.

8. On side of cover where four dummy receptacles are presently mounted, perform the following:

   a. Locate, mark and drill two clusters (4 holes per cluster) of 0.134 to 0.141 inch diameter through holes as shown in figure 8, section view B-B. Use number 29 size twist drill to drill holes.

   b. Locate, mark and drill one cluster (4 holes) of 0.102 to 0.108 inch diameter through holes as shown in figure 8, section view B-B. Use number 37 size twist drill to drill holes.

9. On side of cover opposite side containing four dummy receptacles, locate, mark and drill six clusters (4 holes per cluster) of 0.134 to 0.141 inch diameter through holes as shown in figure 8, section view C-C. Use number 29 size twist drill to drill holes.

VII. C. PROCEDURE (CONTINUED)

10. Using 1/8 inch rubber stamp and black marking ink, apply markings "W-189", "W-100", "W-186", "W-187", "W-188", and "W-192" to inner surface of cover in locations shown in figure. (W-186, W-187, and W-188 markings shall appear in two locations.)

11. Remove instruction foilcal, P/N 1902540, from inner surface of cover. Dispose of foilcal as directed in Section IX of this RIB.

    WARNING: Methyl-Ethyl-Ketone is toxic and flammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

    NOTE: Insure mounting surface is clean prior to applying new instruction plate.

12. Obtain instruction plate, P/N 2901442, from kit and apply methyl-ethyl-ketone to activate adhesive backing on plate. Allow activated adhesive to air dry until surface becomes tacky before performing next step.

13. Mount new instruction plate in same location as previously occupied by removed foilcal. Insure orientation of plate is as indicated in figure 8. (Bottom edge being nearest to assembly identification mark on cover.)

VII. C. PROCEDURE (CONTINUED)

14. Obtain dummy receptacle, P/N 1016073-183, and securing hardware set aside in step 3 and install on cover as shown in figure 9.

15. Obtain dummy receptacle, P/N 1016073-103, from kit and secure to cover as shown in figure 9, using four kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

16. Obtain box mounting receptacle (housing only), P/N 1897424-001, from kit and secure to cover as shown in figure 9, using four kit supplied machine screws, P/N 1006783-12,and self locking nuts, P/N 1016151-002.

17. Obtain three dummy receptacles, P/N 1016073-143, from kit and secure to cover as shown in figure 9, using 12 kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

18. Obtain three dummy receptacles, P/N 1016073-163, from kit and secure to cover as shown in figure 9, using 12 kit supplied machine screws, P/N 1006783-19, and self locking nuts, P/N 1016151-004.

19. Obtain protective cap, P/N MS3181-16C, from kit and secure end of attached chain to hole in cover which was enlarged in step 4. Reference figures 8 and 9. Use kit supplied machine screw, P/N 1006783-23,and self locking nut, P/N 1016151-006, to secure it in place.

VII. C. PROCEDURE (CONTINUED)

20. Obtain cable clamp, P/N 1010400-006, from kit and secure to cover as shown in figure 9, using two kit supplied machine screws, P/N 1006783-44, and self locking nuts, P/N 1016151-010 (AN363C1032). Insure orientation of clamp is as shown in figure 9.

21. Obtain three clamps, P/N 1016105-004, from kit and secure to three new points on cover as shown in figure 9, using three kit supplied machine screws, P/N 1006783-44, and self locking nuts, P/N AN363C1032. Insure orientation of clamps is as shown in figure 9.

22. Remove identification mark "1902541" from inner surface of cover and replace with new identification number "1902632". Marking shall be in accordance with MIL-STD-130 (ES267).

23. Obtain and install cable W192 in cover as shown in figure 9.

24. Reinstall cable W100 in cover as shown in figure 9.

25. Obtain cables W186, W187, and W188 and mount in cover as shown in figure 9.

26. Obtain cable W189 (cable W101 becomes cable W189 after it is modified per this RIB) and mount in cover as shown in figure 9.

VII. PROCEDURE (CONTINUED)

D. DETAILED INSTRUCTIONS FOR MODIFICATION OF INTERCONNECT CABLE W101 (BPP TO IMU), P/N 1900954. Perform modification as follows:

1. Cut and remove cable identification sleeve (marked 1900954) from cable. Dispose of sleeve as directed in Section IX of this RIB.

2. Loosen two screws on connectors P1 and P2.

3. Cut and remove connector P1 and P2 identification sleeves from cable. Dispose of sleeves as directed in Section IX of this RIB.

4. Extract all leads from connector P2, using Bendix 11-7880-20 extraction tool.

5. Remove connector, grommet and telescoping bushing from P2 end of cable. Dispose of removed parts as directed in Section IX of this RIB.

6. Cut and remove tubing which covers cable. Dispose of tubing as directed in Section IX of this RIB.

7. Remove P1 telescoping bushing from cable. Retain two bushings, P/N AN3420-12A and P/N AN3420-16, for later reassembly and dispose of two bushings (with smallest inner diameter) P/N AN3420-6A and P/N AN3420-8A, as directed in Section IX of this RIB.

VII. D. PROCEDURE (CONTINUED)

8. Remove strain relief clamp, connector back shell and grommet insert from rear of connector P1 to permit access to P1 solder wells.

9. Unsolder lead A2 from P1-B and resolder to P1-Z.

10. Obtain leads A10 through A13 from kit lead set and install in cable as indicated in table 9. Accessory items are furnished in kit supplied connector, P/N 1897422-004.

Table 9. Cable Lead Additions

Lead Ident	FROM Ckt.Pt.	TO Ckt.Pt.	Strip Insul.	Tin	Accessory Item P/N	Remarks
A10	P1-G P2-G		0.30 0.22	Yes No	MS3193A-20A	See note 1
A11	P1-H	P2-H	0.30 0.22	Yes No	MS3193A-20A	See note 1
A12	P1-F	P2-F	0.30 0.22	Yes No	MS3193A-20A	See note 1
A13	P1-b	P2-b	0.30 0.22	Yes No	MS3193A-20A	See note 1

Note 1 - Extract contact from applicable positions in kit supplied connector, using Bendix 11-7880-20 extraction tool. Crimp contact on lead using Buchanan MS3191-A crimping tool with Buchanan MS3191-20 positioner.

VII. D. PROCEDURE (CONTINUED)

11. Reinstall grommet insert and connector back shell on rear of connector P1.

12. Obtain zipper tubing, P/N 1902621-005, from kit and install on cable.

13. Obtain P1 identification sleeve, P/N 2901475, from kit and install on cable at P1. Position sleeve such that lettering reads away from P1 and that end of sleeve will lie under strain relief clamp. Heat shrink sleeve in place.

14. Reinstall at connector P1, two telescoping bushings, P/N AN3420-12A and P/N AN3420-16, removed and retained in step 7.

15. Secure strain relief clamp in place on cable. Insure adequate slack exists in cable leads and that bushings and sleeves are properly positioned in strain relief clamp before tightening screws.

16. Obtain cable identification sleeve, P/N 1902621-004, from kit. If sleeve has not been marked with identification number "2901446", mark it with this identification at this time. Marking should be white and 0.25 inch high.

VII. D. PROCEDURE (CONTINUED)

17. Slide cable identification sleeve, P/N 1902621-004, on cable to approximate center location and heat shrink in place.

18. Obtain P2 identification sleeve, P/N 2901199, from kit and position on P2 end of cable such that lettering reads away from P2. Do not heat shrink in place at this time.

19. Obtain strain relief grommet, P/N 1016282-16, from kit and slide on cable.

20. Install cable leads in kit supplied connector, P/N 1897422-004, (new connector P2) as indicated in table 10.

VII. D. PROCEDURE (CONTINUED)

21. Fill unused holes in connector P2 with excess contacts obtained in step 20.

22. Fill unused holes in connector P2 grommet with plug end seals, P/N 1897370-001, supplied in kit.

23. Position P2 identification sleeve such that end of sleeve will lie under strain relief clamp on P2 connector. Heat shrink sleeve in place.

24. Position strain relief grommet under P2 connector strain relief clamp.

25. Secure strain relief clamp in place on cable. Insure adequate slack exists in cable leads before tightening screws.

26. Check for an indication of less than one ohm between the points listed in table 11.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.
2. Make necessary entry in the Equipment Inventory Record.
3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

B. The significant part number changes resulting from this modification are as follows:

Name	Pre-modification P/N	Post-modification P/N
Battery Power Pack Assembly	1900011-031	1900011-041
Battery Power Pack Panel Assembly	1902249-021	1902630-011

Battery Power Pack Cover	1902541	1902632
*Cable Interconnect W101 (BPP to IMU)	1900954	2901446

*Cable name changes to "Cable Interconnect W189 (BPP to IMU)" upon completion of modification.

IX. DISPOSITION OF PARTS REMOVED

A. One connector-plug, P/N MS3126F18-32SX, (1897092-322) and two fuses, P/N F02A32V15AS, (1897099-117) shall be returned to stock as spares per AC Electronics, Logistics (Department 38-09) direction.

B. One resistor, P/N RE75G2490, (1896892-327) shall be transferred to full custody of the government via DD543 form (Inventory Schedule).

C. Scrap all parts not listed above, via AC Electronics form MIL-127 or equivalent.

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of Portable Temperature Controller (PTC), P/N 2900060-011. This modification will accomplish the following:

1. Insure a power fail alarm occurs when the 28 volt input fuse is blown and power is supplied from 115V source.
2. Stabilize bridge excitation voltage when line voltage is low.
3. Enable operation of Block I IMU without changing the temperature adjustment for Block II.
4. Add filter and change to charging circuit to improve critical battery cutoff operation.
5. Change hot alarm trip point to exclude normal operating range.
6. Provide external means of initiating bridge excitation failure test.
7. Provide external means of monitoring battery voltage.
8. Improve the temp failure latching circuit for loss of external power.
9. Reroute 115V fuse wiring for safer operation.

VI. B. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
2	Single pole, single throw	switch
1	HP-428B	DC ammeter
2	Fluke 803B	Differential voltmeter
1	HP-412A Alternate:HP-410C	Voltohmmeter
2	General Radio 1432X Alternate:Rubicon 2015	Decade resistance box
1	Harrison Labs 808A	Power supply
1	Ohmite, 15 ohms, variable, 100 watts minimum	Resistor
AR	MIL-V-6894A unreduced	Varnish

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in Workmanship Standard AC-STD-1, dated 15 January, 1965.

3. Ink markings:

   a. Markings to be removed should be removed with lacquer thinner.

   b. New markings shall be covered with a coat of clear lacquer, after ink has dried.

4. During this modification, lacing may be cut as required to accomplish necessary work. Spot ties shall be added after all conductor rework has been completed.

5. Use heatsink device when unsoldering or soldering near semiconductors.

6. Where marking is specified, hand marking is acceptable.

7. When disassembling the PTC, reinstall loose hardware on major part to insure proper placement and usage of attached hardware upon reassembly.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Remove top cover from PTC and set aside.

2. Remove six flat head screws, P/N 1010630-38, which secure panel assembly, P/N 2900835-011, to PTC case, P/N 2900525-011. Retain screws for later reassembly.

3. Carefully lift panel assembly out of PTC case and place along side of PTC case.

4. Remove five button head screws, P/N 1006783-22, which secure electronic component assembly, P/N 2900521-011, to bottom of PTC case. See figure 1. Retain screws for later reassembly.

5. Remove four button head screws, P/N 1006783-26, flat washers, P/N AN960-C8, and lock washers, P/N MS35338-80, which secure transformer T1 to bottom of PTC case. See figure 1. Retain all hardware for later reassembly.

6. Remove two button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004, which secure capacitor C3 to side of PTC case. See figure 1. Retain screws and nuts for later reassembly.

VII. B. PROCEDURE (CONTINUED)

7. Remove battery retainer cover, P/N 2900511, by removing two flat head screws, P/N 1010630-13, and two button head screws, P/N 1006783-22 with self locking nuts, P/N 1012525-004.

8. Disconnect lead A11 from positive terminal on BT1 and lead A82 from negative terminal on BT8. Temporarily insulate leads A11 and A82 with electrical tape.

9. Reinstall battery retainer cover on battery retainer with original two flat head screws and retain the two button head screws for later installation.

10. Remove two button head screws, P/N 1006783-23, self locking nuts, P/N 1012525-004, and spacers, P/N 1015860-026, which secure lower edge of TB2 to PTC case. See figure 1. Retain all hardware for later reassembly.

11. Remove two button head screws, P/N 1006783-104, four self locking nuts, P/N 1012525-004, and two spacers, P/N 1015860-026, which secure upper edge of TB2 and two cable clamps to PTC case. See figure 1. Retain all hardware for later reassembly.

12. Remove one button head screw, P/N 1006783-104, two self locking nuts, P/N 1012525-004, and one spacer, P/N 2025860-026, which secure cable clamp and TB1 to PTC case. See figure 1. Retain all hardware for later reassembly.

VII. B. PROCEDURE (CONTINUED)

13. Remove three button head screws, P/N 1006783-23, self locking nuts, P/N 1012525-004, and spacers, P/N 1015860-026, which secure TB1 to PTC case. See figure 1. Retain all hardware for later reassembly.

14. Remove one button head screw, P/N 1006783-23, and two self locking nuts, P/N 1012525-004, which secure one cable clamp and electronic component bracket, P/N 2900795, (containing AR1 through AR4) to PTC case. See figure 1. Retain all hardware for later reassembly.

15. Remove two button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004, which secure electronic component bracket, P/N 2900795, to PTC case. See figure 1. Retain all hardware for later reassembly.

16. Remove four button head screws, P/N 1006783-22, which secure relay assembly to PTC case. See figure 1. Retain screws for later reassembly.

17. Remove one button head screw, P/N 1006783-26, and lock washer, P/N MS35338-80, which secure relay assembly to nut sleeve, P/N 2900512-001, and electronic component assembly, P/N 2900521-011.

VII. B. PROCEDURE (CONTINUED)

18. Remove two button head screws, P/N 1006783-23, which secure two sections of each retainer strap on capacitor C3. Remove top section of each retainer strap to permit removal of C3. Retain screws and retainer straps for later reassembly.

19. Remove two button head screws, P/N 1006783-047, spacers, P/N 1015860-017, and self locking nuts, P/N 1016151-010, which secure bell assembly to PTC case. Retain all hardware for later reassembly.

20. Carefully remove wiring harness A, loose parts and assemblies from PTC case and place of workbench.

   a. Remove battery retainer cover, P/N 2900511, by removing two flat head screws, P/N 1010630-13, and retain the screws for later installation.

   b. Connect a 15 ohm variable resistor with an ammeter in series between BT1-(+) and BT8-(-) and proceed with the following steps.

      1) Discharge the battery at a 2.0 ± 0.1 ampere rate.

      2) Monitor individual module voltages; they shall not drop below 3.0 volts, during the first 30 minutes.

VII. B. PROCEDURE (CONTINUED)

      3) Discontinue discharge when total voltage drops below 18 volts or when voltage for individual module drops below 1.8 volts, whichever occurs first.

      4) Recharge at the rate of 100 ma to a cutoff voltage of 4.65 ± 0.05 volts/module, removing each module from the circuit as it attains its cutoff value.

      5) If the 1/2-hour minimum was not obtained in step 2) above, repeat steps 1 through 4.

   c. Reinstall battery retainer cover with original flat head screws.

21. Visually check rotary switch S1 to determine if detent disc has "U" or "V" type notches in its periphery. See figures 2 and 3. If detent disc has "V" type notches, obtain straight headed pin, P/N 2901555, from kit and dispose of as directed in section IX of this RIB, and then proceed to step 22. If detent disc has "U" type notches, perform the following:

   a. Remove rotary switch S1 from panel assembly. Retain all parts.

VII. B. PROCEDURE (CONTINUED)

b. Remove threaded spacer shown in figure 2 which is located adjacent to mid-point of roller arms as follows:

1) Remove flat head screw which secures threaded spacer to square top plate. Retain screw.

2) Loosen other screw from bottom of switch assembly and pull out only far enough to enable removal of threaded spacer. Remove and retain threaded spacer.

c. Disconnect spring from end of roller arms.

d. Swing roller arms out and away from switch assembly.

e. Press roller pin out of detent roller and replace with straight headed pin, P/N 2901555, supplied in kit. New pin shall be installed such that head of pin will be nearest to square top plate. Dispose of removed roller pin as directed in section IX of this RIB.

f. Reconnect spring to roller arms.

g. Apply MIL-S-22473, grade C, sealing and retaining compound to threads of two screws removed previously from threaded spacer.

VII. B. PROCEDURE (CONTINUED)

h. Insert threaded spacer in original position on switch assembly and thread screw from bottom of switch assembly into threaded spacer.

i. Reinstall flat head screw through square top plate into threaded spacer.

j. Reinstall switch assembly on panel assembly.

22. Remove resistor soldered between terminals 2 and 3 on fuseholder XF1. See figure 4. Dispose of resistor as directed in section IX of this RIB.

23. Replace resistor R16 with resistor 1897260-008, and replace all wires on the same respective terminals (see table 1). Dispose of R16 as directed in section IX of this RIB.

a. Obtain the decal, P/N 2901586 from the kit; remove the paper from the gummed back of the decal; and place it over the "135°" label on the 135° temperature calibration switch.

b. Apply a bead of varnish (MIL-V-6894A unreduced) over the decal.

c. Remove the number 2900501 from the panel and replace it with 2901585.

VII. B. PROCEDURE (CONTINUED)

24. Remove "-011" portion of identification mark "ASSY 2900835-011" on panel assembly and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

25. Remove all leads from relay K4, P/N 1015802-004.

26. Remove relay K4 from relay assembly and dispose of as directed in section IX of this RIB.

27. Replace relay K4 with relay, 1015832-318, and replace all wires on respective terminals. (See table 2). Dispose of K4 as directed in section IX of this RIB.

28. Replace diode CR7 with 1N2976B (1896966-075), being careful to connect the cathode and anode in the same manner that they were for CR7. (See table 2). Dispose of CR7 as directed in section IX of this RIB.

29. Remove "-011" portion of identification mark "ASSY 2900777-011" on relay assembly and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

30. Locate, mark and drill one 0.164 to 0.172 inch diameter through hole in electronic component assembly, P/N 2900521-011, as shown in figure 5. Use number 19 size twist drill to drill hole.

31. Apply MIL-C-5541 chemical film to bare metal on inner surface of newly drilled hole.

VII. B. PROCEDURE (CONTINUED)

32. Mark "K18" on electronic component assembly in location shown in figure 5. Use 1/8 inch high character rubber stamp and black marking ink for new marking.

33. Remove identification mark "2900505" on electronic component assembly and replace with identification mark "2901544". New marking shall be per MIL-STD-130 (ES267).

34. Remove "-011" portion of identification mark "ASSY 2900521-011" and replace with new dash number "-021". New marking shall be per MIL-STD-130, (ES267)

NOTE: When performing next step, insure that relay is positioned such that the shoulder on the relay stud which will protrude through the larger of two holes, sufficiently grips the bracket material. Improper relay positioning will cause the shoulder to be drawn into the hole when the self-locking nuts are tightened.

35. Obtain relay, P/N 1015982-007, two self locking nuts, P/N 1016151-006, and one flat washer, P/N AN960 C6, from kit and secure to electronic component assembly as shown in figure 6.

36. Stamp "CR30" between terminals 3 and 10 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

VII. B. PROCEDURE (CONTINUED)

37. Stamp "CR31" between terminals 3 and 11 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

38. Stamp "R63" between terminals 20 and 25 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

39. Obtain two 1N459 diodes from kit and install one between terminals 3 and 10 and the other between terminals 2 and 11 on TB2, as shown in figure 7. Observe proper anode and cathode connections as shown in figure 7.

40. Obtain resistor, P/N RC20GF431J, from kit and install between terminals 20 and 25 on TB2 as shown in figure 7.

41. Remove resistor R11, P/N RC32GF101J, located between terminals 28 and 37 on TB2. Dispose of resistor as directed in Section IX of this RIB.

42. Obtain resistor, P/N RC20GF301J, from kit and install between terminals 28 and 37 on TB2.

43. Using care not to damage sleeving on resistor R10 remove resistor R10, P/N 1016053-003, from between terminals 50 and 58 on TB2. Retain two insulation sleeves from R10 and dispose of R10 as directed in section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

44. Obtain resistor, P/N 1016053-029, from kit and install two sleeves, retained in step 43, on resistor leads. Solder resistor, between terminals 50 and 58 on TB2 as shown in figure 7.

45. Remove resistor R14, P/N RC42GF101J, from between terminals 19 and 30 on TB2. Retain insulation sleeve from R14 and dispose of R14 as directed in section IX of this RIB. Replace R61 with resistor P/N 1016053-024, between terminals 5 and 14 on TB-2. Dispose of old R61 as directed in section IX of this RIB.

46. Obtain resistor, RW55V201 (1896928-068), from kit and install between terminals 19 and 30 on TB2. Insulation sleeve retained in step 45 shall be placed on resistor lead which will be soldered to terminal 30. Reference figure 7.

47. Change wire A135 from terminal 18 to terminal 19 on TB2.

48. Remove diodes CR9 and CR10 which are identical, from terminals 18, 19, and 29 on TB2. Retain CR9 for later use and dispose of CR10 (P/N 1896966-187), as directed in section IX of this RIB. Delete letters CR9 and CR10 from TB2.

49. Remove "-011" portion of identification mark "ASSY 2900778-011" on TB2 and replace with new dash number "-021". New marking shall be in accordance with MIL-STD-130 (ES267).

VII. B. PROCEDURE (CONTINUED)

50. If terminal board (inseparable assembly) (TB2), is marked, P/N 2900519" re-identify as "P/N 2901545". Identification shall be in accordance with MIL-STD-130 (ES267).

51. Bond resistors R10 and R14 to terminal board TB2 per ND 1002203, using epoxy resin, P/N 1010748, curing agent, P/N 1010750, and calcium carbonate filter, P/N 1010749.

52. Remove 1N3030B diodes CR13 and CR14 from TB1-50, 56, and 58, and dispose of as directed in section IX of this RIB. Reference figure 8.

53. Obtain two 1N3029B diodes from kit and install one between terminals 50 and 56 and the other between terminals 50 and 58 on TB1, as shown in figure 8. Observe proper anode and cathode connections shown in figure 8.

54. Remove "-011" portion of identification mark "ASSY 2900513-011" on TB1 and replace with new dash number "-021". New marking shall be in accordance with MIL-STD-130 (ES267).

55. Obtain electronic component bracket, P/N 2901556, two terminal studs, P/N 1896962-003, and two pan head screws, P/N MS35233-12, from kit. Secure terminal studs to component bracket with pan head screws as shown in figure 9. Apply MIL-S-22473, grade C, sealing and retaining compound to threads of two screws prior to installing.

VII. B. PROCEDURE (CONTINUED)

56. Obtain capacitor, P/N CL25BL700UP3, from kit and install between E32 and E33 on electronic component bracket, P/N 2901556, as shown in figure 9. Insure positive lead of capacitor is connected to E32.

57. Remove four button head screws, P/N 1006783-18, flat washers, AN960 C4, and lock washers, P/N MS35338-78, which secure one side of comparators AR1 and AR2 to inner edge of electronic components bracket, P/N 2900795. (Removal of these four screws and associated washers will permit installation of new component bracket as shown in figure 9.) Retain all washers and dispose of four screws as directed in section IX of this RIB.

58. Secure electronic component bracket, P/N 2901556, to electronic component bracket, P/N 2900795, as shown in figure 9, using four button head screws, P/N 1006783-95, (supplied in kit) and washers retained in step 53.

59. Remove capacitor C4 from terminals 37 and 38 of TB3. Dispose of the capacitor as directed in section IX of this RIB. Retain the sleeving for later use.

60. Remove wire AA105 from terminals 47 and 31 of TB3.

VII. B. PROCEDURE (CONTINUED)

61. Move wire B32 of the B harness from terminal 47 to terminal 31 of TB3.

62. Move wire A32 of the A harness from terminal 47 to terminal 31 of TB3.

63. Move wire B36 of the B harness from terminal 38 to terminal 47 of TB3.

64. Remove the "C4" marking on electronic component assembly and replace it with "CR9". Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

65. Install diode CR9 which was removed in step 51, between terminals 38 and 47 of TB3 with cathode end attached to terminal 47. Install sleeving removed in step 59.

66. Interchange wires AA18 and A34 on fuseholder XF2. (See table 2.)

67. Interchange wires AA22 and A35 on fuseholder XF3. (See table 2.)

68. Remove "-011" portion of identification "ASSY 2900522-011" and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

VII. B. PROCEDURE (CONTINUED)

NOTE: If P/N 2901523 is marked on the inseparable assembly, the marking shall be removed and replaced with "P/N 2901583".

69. Remove jumper wire AA118 from between TB3-7 and TB3-8.

70. Change lead on diode CR27 from TB3-8 to TB3-7.

71. Change wire B7 from TB3-8 to TB3-7.

72. Change wire A53 from TB3-15 to TB3-9.

73. Remove the "CR27" marking from the inseparable assembly and replace it with "CR10". Marking shall be 0.09 inch high per ND 1002019 and black in color.

74. Add diode CR10 (1N459) between TB3-15 and TB3-8 with the cathode at TB3-15. This is a new CR10 and is not to be confused with the one that was removed in step 29.

75. Change wire A145 from TB3-9 to TB3-8.

VII. B. PROCEDURE (CONTINUED)

76. Completely remove leads listed in table 1. Do not remove any other leads which may be connected to the listed termination points in table 1.

Table 1. PTC Lead Deletions

Lead Ident.	From Ckt. Pt.	To Ckt. Pt.	Remarks
AA84	CR1-C	E1

VII. B. PROCEDURE (CONTINUED)

Table 3. Wire List AA Lead Additions (Continued)

Note 1 - One more lead (AA156) will be added to this point.
Note 2 - Solder on E1 with leads A33, A79, and AA154.
Note 3 - One more lead (A147) will be added to this point.
Note 4 - One more lead (AA163) will be added to this point.
Note 5 - One more lead (A150) will be added to this point.
Note 6 - Solder on E17 with leads AA66, AA68, and AA69.
Note 7 - Utilize existing contact in connector. Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-20 positioner, Bendix 11-7880-20 extraction tool, and Bendix 11-8107-20 insertion tool.
Note 8 - Solder on E18 with leads A70 and AA72.
Note 9 - Solder on E3 with leads AA73 and AA157.

79. Obtain new wiring harness A leads and required accessory items from kit lead set and install as indicated in table 4. (Notes referenced in the remarks column of table 4 can be found at the end of the table.)

VII. B. PROCEDURE (CONTINUED)

A150	CR1-A		0.30	Yes		Combine with AA158
		K5-3	0.30	Yes		Combine with A4
A151	J2-C		0.20	No		See notes 4 and 5
		TB1-58	0.30	Yes		
A152	TB2-30		0.30	Yes		See note 6
		E32	0.30	Yes		
A153	TB2-53		0.30	Yes		See note 6
		E33	0.30	Yes		

Note 1 - Combine with leads A53 and B5 at this point.
Note 2 - Route lead along harness branch near TB3.
Note 3 - See figure 4 for terminal information.
Note 4 - Utilize existing contact in connector. Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-20 positioner, Bendix 11-7880-20 extraction tool, and Bendix 11-8107-20 insertion tool.
Note 5 - Route lead along harness branch near TB2 and TB3.
Note 6 - Route lead along harness branch near TB1.

VII. B. PROCEDURE (CONTINUED)

80. Wrap and spot tie black lacing tape over terminal 3 on fuseholder XF1 (see figure 4) to secure the terminal to the body of the fuseholder. The wrapping should pass over terminal 1 and also cover a small portion of the lead attached to terminal 3.

81. Spot tie new and rerouted leads into applicable harness as necessary, using black lacing tape.

82. Remove identification band marked "2900654" from wiring harness A and replace with kit supplied identification band marked "2901546". Secure new identification band in place with black lacing tape. Dispose of old identification band as indicated in section IX of this RIB.

83. Remove identification band marked "2900655" from wiring harness B and replace with kit supplied identification band marked "2901549". Secure new identification band in place with black lacing tape. Dispose of old identification band as indicated in Section IX of this RIB.

84. Transfer serial number from nameplate on PTC case to new nameplate supplied in kit. Use 1/16 inch high character metal stamp set to imprint data.

85. Remove nameplate from PTC case and dispose of as directed in section IX of this RIB. Retain four screws.

VII. B. PROCEDURE (CONTINUED)

86. Secure new nameplate to PTC case with four screws retained in preceding step. Apply MIL-H-22473, grade H, sealing and retaining compound to threads of four screws prior to installation.

87. Carefully place wiring harness A, attached parts and assemblies into PTC case.

88. Secure bell assembly to PTC case in original position with hardware retained in step 19. Reference figure 1.

89. Secure capacitor C3 to PTC case in original position with hardware retained in steps 6 and 18. Reference figure 1.

90. Secure transformer T1 to PTC case in original position with hardware retained in step 5. Reference figure 1.

91. Secure electronics component assembly, P/N 2900521 -021, to PTC case in original position with hardware retained in step 4. Reference figure 1.

92. Secure electronic component bracket, P/N 2900795, to PTC case in original position with hardware retained in steps 14 and 15. Insure cable clamp is located above and between AR4 and AR3. Reference figure 1.

VII. B. PROCEDURE (CONTINUED)

93. Secure TB1 to PTC case in original position with hardware retained in step 13. Do not secure upper left corner (next to R13) to PTC case. Reference figure 1.

94. Install hardware retained in step 12 to upper left corner of TB1.

95. Secure two lower corners of TB2 to PTC case with hardware retained in step 10. Reference figure 1.

96. Install hardware retained in step 11 to two upper corners of TB2.

VII. B. PROCEDURE (CONTINUED)

97. Perform continuity and resistance checks per table 5.

Table 5. Continuity-Resistance Checks

From	To	Indication	Remarks
J1-J	J1-L	<1 OHM	All readings shall be less than 1 ohm
J2-C	TB1-58	↓	
J1-H	S1A-24	↓	
J1-B	J1-L	↓	

98. Using a razor blade and india ink, make the following changes to the decal on the inside of the PTC cover:

a. Change the schematic drawing number in the upper left-hand corner of the decal from 2900133 to 2901543.

b. Adjacent to the "28 VDC INPUT J1", change TEMP FAIL-ILTC to TEMP FAIL-LTC. Change POWER FAIL-ILTC to POWER FAIL-LTC. After M GROUND, add H BATT HI and J BATT LO.

c. Cover all new lettering with clear lacquer.

VII. PROCEDURE (CONTINUED)

C. RETEST PROCEDURES.

1. Recalibration of bridge excitation voltages.

NOTE: Relay assembly has to be swung up to make potentiometers accessable. Maintain isolation between assembly and case.

a. Make the test setup as indicated in figure 10.

b. Set control decade to 1560.0 ohms and the indicating decade to 2504.5 ohms.

NOTE: Apply only 28 ± 1 VDC power.

2. Control Bridge.

a. Set TEMP. ADJUST potentiometer to center position (11 turns from clockwise). See figure 1.

b. Connect differential voltmeter number 1 to TB2-56 (hi) and TB2-12 (lo).

c. Connect differential voltmeter number 2 to TB2-42 (hi) and TB2-12 (lo).

d. Adjust R33 and R35 on the relay assembly to obtain simultaneous voltages of 1.950 ± 0.020 VDC on differential voltmeter number 1 and 17.4 ± 0.174 VDC on meter number 2.

VII. C. PROCEDURE (CONTINUED)

3. Indicating Bridge.

   a. Connect differential voltmeter number 1 to TB2-52 (hi) and TB2-45 (lo).

   b. Connect differential voltmeter number 2 to TB2-39 (hi) and TB2-54 (lo).

   c. Adjust R18 and R19 to obtain simultaneous voltages of 1.610 ± 0.016 VDC on voltmeter number 1 and 17.6 ± 0.176 VDC on voltmeter number 2.

   d. Turn selector switch on the panel assembly to OFF.

OFF

4. Recalibration of battery cutoff voltage.

   a. Remove electrical tape from lead A11 and connect to the high side of the voltohmmeter with the low side connected to TP2. Remove the electrical tape from lead A82 and connect it to the negative terminal on BT8.

   b. Turn R16 full clockwise. Turn the selector switch to ON.

   c. Apply 36.8 ± 0.1 VDC to TB2-19 high and TP2 low.

VII. C. PROCEDURE (CONTINUED)

   d. Slowly turn R16 counterclockwise until VTVM voltage drops to 28V source voltage. Decrease cutoff supply voltage from 36.8 to approximately 30 volts and momentarily remove the supply voltage.

   e. Slowly increase the cutoff supply voltage and varify that the switchover point is 36.8 ± 0.1 VDC. Adjust R16 and repeat these procedures if necessary.

   f. Remove the cutoff supply voltage; set the selector switch to OFF. Connect lead A11 to the positive terminal of BT1. Apply 115 VAC at J2-M and J2-J. Turn selector switch to ON. Monitor current through A11 with clip-on ammeter. Verify that the charging current drops to zero at a battery terminal voltage at J1-H high and J1-J low of 36.7 ± 0.3 VDC and that individual module (8) voltages do not exceed 4.75 VDC.

   g. Set selector switch to OFF. Reinstall the battery retainer cover on battery retainer with original two flat-head screws and two button-head screws with self-locking nuts that were removed in step 7.

VII. C. PROCEDURE (CONTINUED)

   h. Secure relay assembly to PTC case in original position with hardware retained in step 16. Reference figure 1.

   i. Secure relay assembly to nut sleeve located between relay assembly and electronic component assembly, P/N 2900521-021, with screw retained in step 17.

   j. Place panel assembly in original mounting position in PTC case and secure with six screws retained in step 2.

5. Recalibration of hot alarm set point.

   a. Set selector switch to ON. Set the HI ALARM LIMIT ADJUST potentiometer full clockwisw and monitor pins J3-A and J3-B.

   b. Set indicating decade box to 2225 ohms.

   c. Slowly turn the HI ALARM LIMIT ADJUST potentiomiter counterclockwise until continuity exists at J3-A and J3-B.

   d. Set the indicator decade box to 2500 and press ALARM INHIBITED (SYSTEM RESET) pushbutton to silence the bell and stop the flashing light.

VII. C. PROCEDURE (CONTINUED)

   e. Set the indicator decade box to 2240 ohms, and slowly decrease resistance in 1-ohm steps. Between 2230 and 2220 ohms the bell shall ring, the IMU HOT lamp shall flash, and continuity shall exist at J3-A and J3-B.

   f. Press and hold the ALARM INHIBITED (SYSTEM RESET) pushbutton for this paragraph. Slowly increase the resistance in 1-ohm steps. Before 2270 ohms, the IMU HOT lamp shall extinguish and continuity shall exist at J3-B and J3-C.

   g. Set indicator decade box at 2254.1 ohms. Set the selector to OFF for 5 seconds. Upon reapplication of power, the IMU HOT lamp shall not be flashing.

   h. Adjust HI TEMP ALARM ADJUST to meet conditions of steps e and g above if necessary.

   i. Set indicator decade box to 2201.3 ohms. The alarm bell shall ring, IMU HOT lamp shall flash, and the meter shall read 138.0 ± 0.5°F with or without the 138° CAL pushbutton depressed. Release the 138° CAL pushbutton and set the decade box to 2500 ohms. Return to normal operation by pressing ALARM INHIBITED (SYSTEM RESET) pushbutton.

VII. C. PROCEDURE (CONTINUED)

5. Temperature Alarm Memory

a. With the 125° CAL pushbutton held in the depressed position, the bell shall ring and the IMU COLD lamp shall flash. Press ALARM INHIBITED (SYSTEM RESET) pushbutton. Release the 125° CAL pushbutton and remove input power for 5 seconds. When power is restored the IMU COLD light shall be flashing. Reset the system by pressing the ALARM INHIBITED (SYSTEM RESET) pushbutton.

→ lamp
[illegible]

b. With the 138° CAL pushbutton held in the depressed position, the bell shall ring and the IMU HOT lamp shall flash. Press ALARM INHIBITED (SYSTEM RESET) pushbutton. Release 138° CAL pushbutton and remove input power for 5 seconds. When power is restored the IMU HOT ligh shall be flashing. Reset the system by pressing the ALARM INHIBITED (SYSTEM RESET) pushbutton.

6. Power Output.

a. Apply 25.2 VDC and remove 115VAC. Inhibit the alarm or open the switch S2 for loss of 115VAC. Set the control decade box to 1530 ohms. Multiply the readings of the output ammeter and the output voltage. The results shall be 60 watts minimum.

VII. C. PROCEDURE (CONTINUED)

7. Indicating Bridge Failure.

a. Apply 115 VAC to J2-M and J2-J. Set control decade box so that PTC meter reads 1.5 ± 0.5 amperes. Jumper J2-C to TP4. IMU HOT and IMU COLD lamps shall flash, the alarm bell shall ring, and the PTC meter shall read 1.5 ± 0.5 amps. Remove jumper and reset system by pressing ALARM INHIBITED (SYSTEM RESET) pushbutton.

8. 28V Line Fuse Indication.

a. Remove the 28V fuse with holder. Bell shall ring and POWER FAIL lamp shall light. Reinsert holder without fuse. Lamp in holder shall light. Open switch S1. Bell shall stop ringing and POWER FAIL lamp shall go out, holder lamp shall continue to indicate. Reinsert fuse in fuseholder.

→ S
ging

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record.

3. Record performance of the modification on the existing Unit History Record sheet (referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain the old Unit History Record sheet in the Acceptance Data Package.

B. Significant part number changes resulting from this modification are as follows:

Name	Pre-modification P/N	Post-modification P/N
Portable Temperature Controller	2900060-011	2900060-021
Panel Assembly	2900835-011	2900835-021
Electronic Component Assembly	2900521-011	2900521-021
Electronic Components Heatsink (Inseparable Assembly)	2900505	2901544

VIII. B. MODIFICATION DESIGNATION (CONTINUED)

Name	Pre-modification P/N	Post-modification P/N

IX. DISPOSITION OF PARTS REMOVED

A. Send relay (K2), P/N 1015802-004, to AC Electronics, Logistics Department, bondroom. Logistics shall utilize this item as a spare.

B. Transfer the following items to full custody of the government via DD543 form (Inventory Schedule).

IX. DISPOSITION OF PARTS REMOVED

Qty	Part Number	Description
2	1N3030B	Semiconductor (1896966-070) (formerly CR13 and CR14)

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of Portable Temperature Controller (PTC), P/N 2900060-011. This modification will accomplish the following:

1. Insure a power fail alarm occurs when the 28 volt input fuse is blown and power is supplied from 115V source.
2. Stabilize bridge excitation voltage when line voltage is low.
3. Enable operation of Block I IMU without changing the temperature adjustment for Block II.
4. Add filter and change to charging circuit to improve critical battery cutoff operation.
5. Change hot alarm trip point to exclude normal operating range.
6. Provide external means of initiating bridge excitation failure test.
7. Provide external means of monitoring battery voltage.
8. Improve the temp failure latching circuit for loss of external power.
9. Reroute 115V fuse wiring for safer operation.

Sheet 2A of 50
Part No. 0102115
Date: 11 OCT 66
TDRR
Revision C

I. PURPOSE

10. To make the batteries more accessible and provide for more mechanical support.
11. To reduce power to two lamps and relays to rated values.

AR	MIL-V-6894A unreduced	Varnish

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in Workmanship Standard AC-STD-1, dated 15 January, 1965.

3. Ink markings:

   a. Markings to be removed should be removed with lacquer thinner.

   b. New markings shall be covered with a coat of clear lacquer, after ink has dried.

4. During this modification, lacing may be cut as required to accomplish necessary work. Spot ties shall be added after all conductor rework has been completed.

5. Use heatsink device when unsoldering or soldering near semiconductors.

6. Where marking is specified, hand marking is acceptable.

7. When disassembling the PTC, reinstall loose hardware on major part to insure proper placement and usage of attached hardware upon reassembly. Discard the two nuts. Remove two brackets, P/N 2900510, fastened with two screws, P/N 1010630-13 and two nuts, P/N 1016151-004. Discard brackets, screws and nuts.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Remove top cover from PTC and set aside.

2. Remove six flat head screws, P/N 1010630-38, which secure panel assembly, P/N 2900835-011, to PTC case, P/N 2900525-011. Retain screws for later reassembly.

3. Carefully lift panel assembly out of PTC case and place along side of PTC case.

4. Remove five button head screws, P/N 1006783-22, which secure electronic component assembly, P/N 2900521-011, to bottom of PTC case. See figure 1. Retain screws for later reassembly.

5. Remove four button head screws, P/N 1006783-26, flat washers, P/N AN960-C8, and lock washers, P/N MS35338-80, which secure transformer T1 to bottom of PTC case. See figure 1. Retain all hardware for later reassembly.

6. Remove two button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004, which secure capacitor C3 to side of PTC case. See figure 1. Retain screws and nuts for later reassembly.

VII. B. PROCEDURE (CONTINUED)

7. Remove battery retainer cover, P/N 2900511, by removing two flat head screws, P/N 1010630-13, and two button head screws, P/N 1006783-22 with self locking nuts, P/N 1012525-004.

8. Disconnect lead A11 from positive terminal on BT1 and lead A82 from negative terminal on BT8. Temporarily insulate leads A11 and A82 with electrical tape.

9. Reinstall battery retainer cover on battery retainer with original two flat head screws and retain the two button head screws for later installation.

10. Remove two button head screws, P/N 1006783-23, self locking nuts, P/N 1012525-004, and spacers, P/N 1015860-026, which secure lower edge of TB2 to PTC case. See figure 1. Retain all hardware for later reassembly.

11. Remove two button head screws, P/N 1006783-104, four self locking nuts, P/N 1012525-004, and two spacers, P/N 1015860-026, which secure upper edge of TB2 and two cable clamps to PTC case. See figure 1. Retain all hardware for later reassembly.

12. Remove one button head screw, P/N 1006783-104, two self locking nuts, P/N 1012525-004, and one spacer, P/N 2025860-026, which secure cable clamp and TB1 to PTC case. See figure 1. Retain all hardware for later reassembly.

VII. B. PROCEDURE (CONTINUED)

13. Remove three button head screws, P/N 1006783-23, self locking nuts, P/N 1012525-004, and spacers, P/N 1015860-026, which secure TB1 to PTC case. See figure 1. Retain all hardware for later reassembly.

14. Remove one button head screw, P/N 1006783-23, and two self locking nuts, P/N 1012525-004, which secure one cable clamp and electronic component bracket, P/N 2900795, (containing AR1 through AR4) to PTC case. See figure 1. Retain all hardware for later reassembly.

15. Remove two button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004, which secure electronic component bracket, P/N 2900795, to PTC case. See figure 1. Retain all hardware for later reassembly.

16. Remove four button head screws, P/N 1006783-22, which secure relay assembly to PTC case. See figure 1. Retain screws for later reassembly.

17. Remove one button head screw, P/N 1006783-26, and lock washer, P/N MS35338-80, which secure relay assembly to nut sleeve, P/N 2900512-001, and electronic component assembly, P/N 2900521-011.

VII. B. PROCEDURE (CONTINUED)

18. Remove two button head screws, P/N 1006783-23, which secure two sections of each retainer strap on capacitor C3. Remove top section of each retainer strap to permit removal of C3. Retain screws and retainer straps for later reassembly.

19. Remove two button head screws, P/N 1006783-047, spacers, P/N 1015860-017, and self locking nuts, P/N 1016151-010, which secure bell assembly to PTC case. Retain all hardware for later reassembly.

20. Carefully remove wiring harness A, loose parts and assemblies from PTC case and place of workbench.

    a. Remove battery retainer cover, P/N 2900511, by removing two flat head screws, P/N 1010630-13, and retain the screws for later installation.

    b. Connect a 15 ohm variable resistor with an ammeter in series between BT1-(+) and BT8-(-) and proceed with the following steps.

        1) Discharge the battery at a 2.0 ± 0.1 ampere rate.

        2) Monitor individual module voltages; they shall not drop below 3.0 volts, during the first 30 minutes.

VII. B. PROCEDURE (CONTINUED)

        3) Discontinue discharge when total voltage drop below 18 volts or when voltage for individual module drops below 1.8 volts, whichever occurs first.

        4) Recharge at the rate of 100 ma to a cutoff voltage of 4.65 ± 0.05 volts/module, removing each module from the circuit as it attains its cutoff value.

        5) If the 1/2-hour minimum was not obtained in step 2) above, repeat steps 1 through 4.

    c. Install two brackets, P/N 2901587 from kit using two button head screws retained in step B.7.

    d. Remove three screws, P/N 1006783-26 and three washers, P/N MS35338-80 from battery retainer bracket, P/N 2900508. Obtain two cushioning pads from kit, P/N 2901588-002 and place one at each end end of the battery (use only one pad if there is insufficient room for both) and reinstall retainer bracket. Secure bracket using only two screws and washers, leaving the hole vacant directly under the amplifier bracket, P/N 2900795. Discard one screw and one washer.

    e. Reinstall battery retainer cover with original flat head screws.

VII. B. PROCEDURE (CONTINUED)

21. Visually check rotary switch S1 to determine if detent disc has "U" or "V" type notches in its periphery. See figures 2 and 3. If detent disc has "V" type notches, obtain straight headed pin, P/N 2901555, from kit and dispose of as directed in section IX of this RIB, and then proceed to step 22. If detent disc has "U" type notches, perform the following:

    a. Remove rotary switch S1 from panel assembly. . Retain all parts.

VII. B. PROCEDURE (CONTINUED)

    b. Remove threaded spacer shown in figure 2 which is located adjacent to mid-point of roller arms as follows:

        1) Remove flat head screw which secures threaded spacer to square top plate. Retain screw.

        2) Loosen other screw from bottom of switch assembly and pull out only far enough to enable removal of threaded spacer. Remove and retain threaded spacer.

    c. Disconnect spring from end of roller arms.

    d. Swing roller arms out and away from switch assembly.

    e. Press roller pin out of detent roller and replace with straight headed pin, P/N 2901555, supplied in kit. New pin shall be installed such that head of pin will be nearest to square top plate. Dispose of removed roller pin as directed in section IX of this RIB.

    f. Reconnect spring to roller arms.

    g. Apply MIL-S-22473, grade C, sealing and retaining compound to threads of two screws removed previously from threaded spacer.

VII. B. PROCEDURE (CONTINUED)

h. Insert threaded spacer in original position on switch assembly and thread screw from bottom of switch assembly into threaded spacer.

i. Reinstall flat head screw through square top plate into threaded spacer.

j. Reinstall switch assembly on panel assembly.

22. Remove resistor soldered between terminals 2 and 3 on fuseholder XF1. See figure 4. Dispose of resistor as directed in section IX of this RIB.

23. Replace resistor R16 with resistor 1897260-008, and replace all wires on the same respective terminals (see table 1). Dispose of R16 as directed in section IX of this RIB.

a. Obtain the decal, P/N 2901586 from the kit; remove the paper from the gummed back of the decal; and place it over the "135°" label on the 135° temperature calibration switch.

b. Apply a bead of varnish (MIL-V-6894A unreduced) over the decal.

c. Remove the number 2900501 from the panel and replace it with 2901585.

VII. B. PROCEDURE (CONTINUED)

24. Remove "-011" portion of identification mark "ASSY 2900835-011" on panel assembly and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

25. Remove all leads from relay K4, P/N 1015802-004.

26. Remove relay K4 from relay assembly and dispose of as directed in section IX of this RIB.

27. Replace relay K4 with relay, 1015832-318, and replace all wires on respective terminals. (See table 2).

28. Replace diode CR7 with 1N2976B (1896966-075), being careful to connect the cathode and anode in the same manner that they were for CR7. (See table 2). Dispose of CR7 as directed in section IX of this RIB.

29. Remove "-011" portion of identification mark "ASSY 2900777-011" on relay assembly and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

30. Locate, mark and drill one 0.164 to 0.172 inch diameter through hole in electronic component assembly, P/N 2900521-011, as shown in figure 5. Use number 19 size twist drill to drill hole.

31. Apply MIL-C-5541 chemical film to bare metal on inner surface of newly drilled hole.

VII. B. PROCEDURE (CONTINUED)

32. Mark "K18" on electronic component assembly in location shown in figure 5. Use 1/8 inch high character rubber stamp and black marking ink for new marking.

33. Remove identification mark "2900505" on electronic component assembly and replace with identification mark "2901544". New marking shall be per MIL-STD-130 (ES267).

34. Remove "-011" portion of identification mark "ASSY 2900521-011" and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267)

NOTE: When performing next step, insure that relay is positioned such that the shoulder on the relay stud which will protrude through the larger of two holes, sufficiently grips the bracket material. Improper relay positioning will cause the shoulder to be drawn into the hole when the self-locking nuts are tightened.

35. Obtain relay, P/N 1015982-007, two self locking nuts, P/N 1016161-006, and one flat washer, P/N AN960 C6, from kit and secure to electronic component assembly as shown in figure 6.

36. Stamp "CR30" between terminals 3 and 10 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

VII. B. PROCEDURE (CONTINUED)

37. Stamp "CR31" between terminals 3 and 11 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

38. Stamp "R63" between terminals 20 and 25 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

39. Obtain two 1N459 diodes from kit and install one between terminals 3 and 10 and the other between terminals 2 and 11 on TB2, as shown in figure 7. Observe proper anode and cathode connections as shown in figure 7.

40. Obtain resistor, P/N RC20GF431J, from kit and install between terminals 20 and 25 on TB2 as shown in figure 7.

41. Remove resistors as follows:

a. Remove resistor R53, P/N RC32GF510J, located between terminals 26 and 34 on TB2.

b. Remove resistor R57, P/N RC32GF510J, located between terminals 27 and 35 on TB2.

c. Remove resistor R56, P/N RC42GF510J, located between terminals 23 and 26 on TB2.

VII. B. PROCEDURE (CONTINUED)

d. Remove resistor R11, P/N RC32GF101J, located between terminals 28 and 37 on TB2.

e. Remove resistor R25, P/N RC32GF101J, located between terminals 28 and 38 on TB2.

f. Dispose of resistors as directed in section IX of this RIB.

42. Obtain and install the following resistors:

a. Resistor RC42GF121J install between terminals 26 and 34 on TB2.

b. Resistor RC42GF121J install between terminals 27 and 35 on TB2.

c. Resistor RC42GF750J install between terminals 23 and 36 on TB2.

d. Resistor RC20GF301J install between terminals 28 and 37 on TB2.

e. Resistor RC32GF271J install between terminals 28 and 38 on TB2.

43. Using care not to damage sleeving on resistor R10 remove resistor R10, P/N 1016053-003, from between terminals 50 and 58 on TB2. Retain two insulation sleeves from R10 and dispose of R10 as directed in section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

44. Obtain resistor, P/N 1016053-029, from kit and install two sleeves, retained in step 43, on resistor leads. Solder resistor, between terminals 50 and 58 on TB2 as shown in figure 7.

45. Remove resistor R14, P/N RC42GF101J, from between terminals 19 and 30 on TB2. Retain insulation sleeve from R14 and dispose of R14 as directed in section IX of this RIB. Replace R61 with resistor P/N 1016053-024, between terminals 5 and 14 on TB-2. Dispose of old R61 as directed in section IX of this RIB.

46. Obtain resistor, RW55V201 (1896928-068), from kit and install between terminals 19 and 30 on TB2. Insulation sleeve retained in step 45 shall be placed on resistor lead which will be soldered to terminal 30. Reference figure 7.

47. Change wire A135 from terminal 18 to terminal 19 on TB2.

48. Remove diodes CR9 and CR10 which are identical, from terminals 18, 19, and 29 on TB2. Retain CR9 for later use and dispose of CR10 (P/N 1896966-187), as directed in section IX of this RIB. Delete letters CR9 and CR10 from TB2.

49. Remove "-011" portion of identification mark "ASSY 2900778-011" on TB2 and replace with new dash number "-021". New marking shall be in accordance with MIL-STD-130 (ES267).

VII. B. PROCEDURE (CONTINUED)

50. If terminal board (inseparable assembly) (TB2), is marked, P/N 2900519" re-identify as "P/N 2901545". Identification shall be in accordance with MIL-STD-130 (ES267).

51. Bond resistors R10 and R14 to terminal board TB2 per ND 1002203, using epoxy resin, P/N 1010748, curing agent, P/N 1010750, and calcium carbonate filter, P/N 1010749.

52. Remove 1N3030B diodes CR13 and CR14 from TB1-50, 56, and 58, and dispose of as directed in section IX of this RIB. Reference figure 8.

53. Obtain two 1N3029B diodes from kit and install one between terminals 50 and 56 and the other between terminals 50 and 58 on TB1, as shown in figure 8. Observe proper anode and cathode connections shown in figure 8.

54. Remove "-011" portion of identification mark "ASSY 2900513-011" on TB1 and replace with new dash number "-021". New marking shall be in accordance with MIL-STD-130 (ES267).

55. Obtain electronic component bracket, P/N 2901556, two terminal studs, P/N 1896962-003, and two pan head screws, P/N MS35233-12, from kit. Secure terminal studs to component bracket with pan head screws as shown in figure 9. Apply MIL-S-22473, grade C, sealing and retaining compound to threads of two screws prior to installing.

VII. B. PROCEDURE (CONTINUED)

56. Obtain capacitor, P/N CL25BL700UP3, from kit and install between E32 and E33 on electronic component bracket, P/N 2901556, as shown in figure 9. Insure positive lead of capacitor is connected to E32.

57. Remove four button head screws, P/N 1006783-18, flat washers, AN960 C4, and lock washers, P/N MS35338-78, which secure one side of comparators AR1 and AR2 to inner edge of electronic components bracket, P/N 2900795. (Removal of these four screws and associated washers will permit installation of new component bracket as shown in figure 9.) Retain all washers and dispose of four screws as directed in section IX of this RIB.

58. Secure electronic component bracket, P/N 2901556, to electronic component bracket, P/N 2900795, as shown in figure 9, using four button head screws, P/N 1006783-95, (supplied in kit) and washers retained in step 53.

59. Remove capacitor C4 from terminals 37 and 38 of TB3. Dispose of the capacitor as directed in section IX of this RIB. Retain the sleeving for later use.

60. Remove wire AA105 from terminals 47 and 31 of TB3.

VII. B. PROCEDURE (CONTINUED)

61. Move wire B32 of the B harness from terminal 47 to terminal 31 of TB3.

62. Move wire A32 of the A harness from terminal 47 to terminal 31 of TB3.

63. Move wire B36 of the B harness from terminal 38 to terminal 47 of TB3.

64. Remove the "C4" marking on electronic component assembly and replace it with "CR9". Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

65. Install diode CR9 which was removed in step 51, between terminals 38 and 47 of TB3 with cathode end attached to terminal 47. Install sleeving removed in step 59.

66. Interchange wires AA18 and A34 on fuseholder XF2. (See table 2.)

67. Interchange wires AA22 and A35 on fuseholder XF3. (See table 2.)

68. Remove "-011" portion of identification "ASSY 2900522-011" and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

VII. B. PROCEDURE (CONTINUED)

NOTE: If P/N 2901523 is marked on the inseparable assembly, the marking shall be removed and replaced with "P/N 2901583".

69. Remove jumper wire AA118 from between TB3-7 and TB3-8.

70. Change lead on diode CR27 from TB3-8 to TB3-7.

71. Change wire B7 from TB3-8 to TB3-7.

72. Change wire A53 from TB3-15 to TB3-9.

73. Remove the "CR27" marking from the inseparable assembly and replace it with "CR10". Marking shall be 0.09 inch high per ND 1002019 and black in color.

74. Add diode CR10 (1N459) between TB3-15 and TB3-8 with the cathode at TB3-15. This is a new CR10 and is not to be confused with the one that was removed in step 29.

75. Change wire A145 from TB3-9 to TB3-8.

VII. B. PROCEDURE (CONTINUED)

76. Completely remove leads listed in table 1. Do not remove any other leads which may be connected to the listed termination points in table 1.

Table 1. PTC Lead Deletions

Lead Ident.	From Ckt. Pt.	To Ckt. Pt.	Remarks
AA84	CR1-C	E1

*One more lead (AA163) will be added to this point later.
**Lead was previously removed from this point.
***Two more leads (AA154 and AA156) will be added to this point later.
****One more lead (A144) will be added to this point later.

VII. B. PROCEDURE (CONTINUED)

78. Obtain new wire list AA leads and required accessory items from kit lead set and install as indicated in table 3. (Notes referenced in the remarks column of table 3 can be found at the end of the table.)

Table 3. Wire List AA Lead Additions

VII. B. PROCEDURE (CONTINUED)

Table 3. Wire List AA Lead Additions (Continued)

Note 1 - One more lead (AA156) will be added to this point.
Note 2 - Solder on E1 with leads A33, A79, and AA154.
Note 3 - One more lead (A147) will be added to this point.
Note 4 - One more lead (AA163) will be added to this point.
Note 5 - One more lead (A150) will be added to this point.
Note 6 - Solder on E17 with leads AA66, AA68, and AA69.
Note 7 - Utilize existing contact in connector. Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-20 positioner, Bendix 11-7880-20 extraction tool, and Bendix 11-8107-20 insertion tool.
Note 8 - Solder on E18 with leads A70 and AA72.
Note 9 - Solder on E3 with leads AA73 and AA157.

79. Obtain new wiring harness A leads and required accessory items from kit lead set and install as indicated in table 4. (Notes referenced in the remarks column of table 4 can be found at the end of the table.)

		K5-3	0.30	Yes		Combine with A4
A151	J2-C		0.20	No		See notes 4 and 5
		TB1-58	0.30	Yes		
A152	TB2-30		0.30	Yes		See note 6
		E32	0.30	Yes		
A153	TB2-53		0.30	Yes		See note 6
		E33	0.30	Yes		

Note 1 - Combine with leads A53 and B5 at this point.
Note 2 - Route lead along harness branch near TB3.
Note 3 - See figure 4 for terminal information.
Note 4 - Utilize existing contact in connector. Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-20 positioner, Bendix 11-7880-20 extraction tool, and Bendix 11-8107-20 insertion tool.
Note 5 - Route lead along harness branch near TB2 and TB3.
Note 6 - Route lead along harness branch near TB1.

VII. B. PROCEDURE (CONTINUED)

80. Wrap and spot tie black lacing tape over terminal 3 on fuseholder XF1 (see figure 4) to secure the terminal to the body of the fuseholder. The wrapping should pass over terminal 1 and also cover a small portion of the lead attached to terminal 3.

81. Spot tie new and rerouted leads into applicable harness as necessary, using black lacing tape.

82. Remove identification band marked "2900654" from wiring harness A and replace with kit supplied identification band marked "2901546". Secure new identification band in place with black lacing tape. Dispose of old identification band as indicated in section IX of this RIB.

83. Remove identification band marked "2900655" from wiring harness B and replace with kit supplied identification band marked "2901549". Secure new identification band in place with black lacing tape. Dispose of old identification band as indicated in Section IX of this RIB.

84. Transfer serial number from nameplate on PTC case to new nameplate supplied in kit. Use 1/16 inch high character metal stamp set to imprint data.

85. Remove nameplate from PTC case and dispose of as directed in section IX of this RIB. Retain four screws.

VII. B. PROCEDURE (CONTINUED)

86. Secure new nameplate to PTC case with four screws retained in preceeding step. Apply MIL-H-22473, grade H, sealing and retaining compound to threads of four screws prior to installation.

87. Carefully place wiring harness A, attached parts and assemblies into PTC case.

88. Secure bell assembly to PTC case in original position with hardware retained in step 19. Reference figure 1.

89. Secure capacitor C3 to PTC case in original position with hardware retained in steps 6 and 18. Reference figure 1.

90. Secure transformer T1 to PTC case in original position with hardware retained in step 5. Reference figure 1.

91. Secure electronics component assembly, P/N 2900521 -021, to PTC case in original position with hardware retained in step 4. Reference figure 1.

92. Secure electronic component bracket, P/N 2900795, to PTC case in original position with hardware retained in steps 14 and 15. Insure cable clamp is located above and between AR4 and AR3. Reference figure 1.

VII. B. PROCEDURE (CONTINUED)

93. Secure TB1 to PTC case in original position with hardware retained in step 13. Do not secure upper left corner (next to R13) to PTC case. Reference figure 1.

94. Install hardware retained in step 12 to upper left corner of TB1.

95. Secure two lower corners of TB2 to PTC case with hardware retained in step 10. Reference figure 1.

96. Install hardware retained in step 11 to two upper corners of TB2.

VII. B. PROCEDURE (CONTINUED)

97. Perform continuity and resistance checks per table 5.

Table 5. Continuity-Resistance Checks

From	To	Indication	Remarks
J1-J	J1-L	<1 OHM	All readings shall be less than 1 ohm
J2-C	TB1-58	↓	
J1-H	S1A-24	↓	
J1-B	J1-L	↓	

98. Using a razor blade and india ink, make the following changes to the decal on the inside of the PTC cover:

a. Change the schematic drawing number in the upper left-hand corner of the decal from 2900133 to 2901543.

b. Adjacent to the "28 VDC INPUT J1", change TEMP FAIL-ILTC to TEMP FAIL-LTC. Change POWER FAIL-ILTC to POWER FAIL-LTC. After M GROUND, add H BATT HI and J BATT LO.

c. Cover all new lettering with clear lacquer.

VII. PROCEDURE (CONTINUED)

C. RETEST PROCEDURES.

1. Recalibration of bridge excitation voltages.

NOTE: Relay assembly has to be swung up to make potentiometers accessable. Maintain isolation between assembly and case.

a. Make the test setup as indicated in figure 10.

b. Set control decade to 1560.0 ohms and the indicating decade to 2504.5 ohms.

NOTE: Apply only 28 ± 1 VDC power.

2. Control Bridge.

a. Set TEMP. ADJUST potentiometer to center position (11 turns from clockwise). See figure 1.

b. Connect differential voltmeter number 1 to TB2-56 (hi) and TB2-12 (lo).

c. Connect differential voltmeter number 2 to TB2-42 (hi) and TB2-12 (lo).

d. Adjust R33 and R35 on the relay assembly to obtain simultaneous voltages of 1.950 ± 0.020 VDC on differential voltmeter number 1 and 17.4 ± 0.174 VDC on meter number 2.

VII. C. PROCEDURE (CONTINUED)

3. Indicating Bridge.

   a. Connect differential voltmeter number 1 to TB2-52 (hi) and TB2-45 (lo).

   b. Connect differential voltmeter number 2 to TB2-39 (hi) and TB2-54 (lo).

   c. Adjust R18 and R19 to obtain simultaneous voltages of 1.610 ± 0.016 VDC on voltmeter number 1 and 17.6 ± 0.176 VDC on voltmeter number 2.

   d. Turn selector switch on the panel assembly to **OFF**. OFF

4. Recalibration of battery cutoff voltage.

   a. Remove electrical tape from lead A11 and connect to the high side of the voltohmmeter with the low side connected to TP2. Remove the electrical tape from lead A82 and connect it to the negative terminal on BT8, after removing the battery cover by removing two flat head screws.
   b. Turn R16 full clockwise. Turn the selector switch to ON.

   c. Apply 36.8 ± 0.1 VDC to TB2-19 high and TP2 low.

VII. C. PROCEDURE (CONTINUED)

   d. Slowly turn R16 counterclockwise until VTVM voltage drops to 28V source voltage. Decrease cutoff supply voltage from 36.8 to approximately 30 volts and momentarily remove the supply voltage.

   e. Slowly increase the cutoff supply voltage and varify that the switchover point is 36.8 ± 0.1 VDC. Adjust R16 and repeat these procedures if necessary.

   f. Remove the cutoff supply voltage; set the selector switch to OFF. Connect lead A11 to the positive terminal of BT1. Apply 115 VAC at J2-M and J2-J. Turn selector switch to ON. Monitor current through A11 with clip-on ammeter. Verify that the charging current drops to zero at a battery terminal voltage at J1-H high and J1-J low of 36.7 ± 0.3 VDC and that individual module (8) voltages do not exceed 4.75 VDC.

   g. Set selector switch to OFF. Obtain cushioning pad, P/N 2901588-001 from kit and place on battery. Reinstall the battery retainer cover on battery retainer with original two flat head screws.

VII. C. PROCEDURE (CONTINUED)

   h. Secure relay assembly to PTC case in original position with hardware retained in step 16. Reference figure 1.

   i. Secure relay assembly to nut sleeve located between relay assembly and electronic component assembly, P/N 2900521-021, with screw retained in step 17.

   j. Place panel assembly in original mounting position in PTC case and secure with six screws retained in step 2.

5. Recalibration of hot alarm set point.

   a. Set selector switch to ON. Set the HI ALARM LIMIT ADJUST potentiometer full clockwisw and monitor pins J3-A and J3-B.

   b. Set indicating decade box to 2225 ohms.

   c. Slowly turn the HI ALARM LIMIT ADJUST potentiomiter counterclockwise until continuity exists at J3-A and J3-B.

   d. Set the indicator decade box to 2500 and press ALARM INHIBITED (SYSTEM RESET) pushbutton to silence the bell and stop the flashing light.

VII. C. PROCEDURE (CONTINUED)

   e. Set the indicator decade box to 2240 ohms, and slowly decrease resistance in 1-ohm steps. Between 2230 and 2220 ohms the bell shall ring, the IMU HOT lamp shall flash, and continuity shall exist at J3-A and J3-B.

   f. Press and hold the ALARM INHIBITED (SYSTEM RESET) pushbutton for this paragraph. Slowly increase the resistance in 1-ohm steps. Before 2270 ohms, the IMU HOT lamp shall extinguish and continuity shall exist at J3-B and J3-C.

   g. Set indicator decade box at 2254.1 ohms. Set the selector to OFF for 5 seconds. Upon reapplication of power, the IMU HOT lamp shall not be flashing.

   h. Adjust HI TEMP ALARM ADJUST to meet conditions of steps e and g above if necessary.

   i. Set indicator decade box to 2201.3 ohms. The alarm bell shall ring, IMU HOT lamp shall flash, and the meter shall read 138.0 ± 0.5°F with or without the 138° CAL pushbutton depressed. Release the 138° CAL pushbutton and set the decade box to 2500 ohms. Return to normal operation by pressing ALARM INHIBITED (SYSTEM RESET) pushbutton.

VII. C. PROCEDURE (CONTINUED)

5. Temperature Alarm Memory

a. With the 125° CAL pushbutton held in the depressed position, the bell shall ring and the IMU COLD **lamp** shall flash. Press ALARM INHIBITED (SYSTEM RESET) pushbutton. Release the 125° CAL pushbutton and remove input power for 5 seconds. When power is restored the IMU COLD light shall be flashing. Reset the system by pressing the ALARM INHIBITED (SYSTEM RESET) pushbutton.

→ lamp [illegible]

b. With the 138° CAL pushbutton held in the depressed position, the bell shall ring and the IMU HOT lamp shall flash. Press ALARM INHIBITED (SYSTEM RESET) pushbutton. Release 138° CAL pushbutton and remove input power for 5 seconds. When power is restored the IMU HOT ligh shall be flashing. Reset the system by pressing the ALARM INHIBITED (SYSTEM RESET) pushbutton.

6. Power Output.

a. Apply 25.2 VDC and remove 115VAC. Inhibit the alarm or open the switch S2 for loss of 115VAC. Set the control decade box to 1530 ohms. Multiply the readings of the output ammeter and the output voltage. The results shall be 60 watts minimum.

VII. C. PROCEDURE (CONTINUED)

7. Indicating Bridge Failure.

a. Apply 115 VAC to J2-M and J2-J. Set control decade box so that PTC meter reads 1.5 ± 0.5 amperes. Jumper J2-C to TP4. IMU HOT and IMU COLD lamps shall flash, the alarm bell shall ring, and the PTC meter shall read 1.5 ± 0.5 amps. Remove jumper and reset system by pressing ALARM INHIBITED (SYSTEM RESET) pushbutton.

8. 28V Line Fuse Indication.

a. Remove the 28V fuse with holder. Bell shall ring and POWER FAIL lamp shall light. Reinsert holder without fuse. Lamp in holder shall light. Open switch S1. Bell shall stop **ringing** and POWER FAIL lamp shall go out, holder lamp shall continue to indicate. Reinsert fuse in fuseholder.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record.

3. Record performance of the modification on the existing Unit History Record sheet (referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain the old Unit History Record sheet in the Acceptance Data Package.

B. Significant part number changes resulting from this modification are as follows:

Name	Pre-modification P/N	Post-modification P/N
Portable Temperature Controller	2900060-011	2900060-021
Panel Assembly	2900835-011	2900835-021
Electronic Component Assembly	2900521-011	2900521-021
Electronic Components Heatsink (Inseparable Assembly)	2900505	2901544

VIII. B. MODIFICATION DESIGNATION (CONTINUED)

Name	Pre-modification P/N	Post-modification P/N

IX. DISPOSITION OF PARTS REMOVED

A. Send relay (K2), P/N 1015802-004, to AC Electronics, Logistics Department, bondroom. Logistics shall utilize this item as a spare.

B. Transfer the following items to full custody of the government via DD543 form (Inventory Schedule).

IX. B. DISPOSITION OF PARTS REMOVED (CONTINUED)

Qty	Part Number	Description
2	1N3030B	Semiconductor (1896966-070) (formerly CR13 and CR14)

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of Portable Temperature Controller (PTC), P/N 2900060-011. This modification will accomplish the following:

1. Insure a power fail alarm occurs when the 28 volt input fuse is blown and power is supplied from 115V source.
2. Stabilize bridge excitation voltage when line voltage is low.
3. Enable operation of Block I IMU without changing the temperature adjustment for Block II.
4. Add filter and change to charging circuit to improve critical battery cutoff operation.
5. Change hot alarm trip point to exclude normal operating range.
6. Provide external means of initiating bridge excitation failure test.
7. Provide external means of monitoring battery voltage.
8. Improve the temp failure latching circuit for loss of external power.
9. Reroute 115V fuse wiring for safer operation.

Sheet 2A of 50
Part No. 0102115
Date: 11 OCT 66
TDRR
Revision C

I. PURPOSE

10. To make the batteries more accessible and provide for more mechanical support.
11. To reduce power to two lamps and relays to rated values.

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in Workmanship Standard AC-STD-1, dated 15 January, 1965.

3. Ink markings:

   a. Markings to be removed should be removed with lacquer thinner.

   b. New markings shall be covered with a coat of clear lacquer, after ink has dried.

4. During this modification, lacing may be cut as required to accomplish necessary work. Spot ties shall be added after all conductor rework has been completed.

5. Use heatsink device when unsoldering or soldering near semiconductors.

6. Where marking is specified, hand marking is acceptable.

7. When disassembling the PTC, reinstall loose hardware on major part to insure proper placement and usage of attached hardware upon reassembly. Discard the two nuts. Remove two brackets, P/N 2900510, fastened with two screws, P/N 1010630-13 and two nuts, P/N 1016151-004. Discard brackets, screws and nuts.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Remove top cover from PTC and set aside.

2. Remove six flat head screws, P/N 1010630-38, which secure panel assembly, P/N 2900835-011, to PTC case, P/N 2900525-011. Retain screws for later reassembly.

3. Carefully lift panel assembly out of PTC case and place along side of PTC case.

4. Remove five button head screws, P/N 1006783-22, which secure electronic component assembly, P/N 2900521-011, to bottom of PTC case. See figure 1. Retain screws for later reassembly.

5. Remove four button head screws, P/N 1006783-26, flat washers, P/N AN960-C8, and lock washers, P/N MS35338-80, which secure transformer T1 to bottom of PTC case. See figure 1. Retain all hardware for later reassembly.

6. Remove two button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004, which secure capacitor C3 to side of PTC case. See figure 1. Retain screws and nuts for later reassembly.

VII. B. PROCEDURE (CONTINUED)

7. Remove battery retainer cover, P/N 2900511, by removing two flat head screws, P/N 1010630-13, and two button head screws, P/N 1006783-22 with self locking nuts, P/N 1012525-004.

8. Disconnect lead A11 from positive terminal on BT1 and lead A82 from negative terminal on BT8. Temporarily insulate leads A11 and A82 with electrical tape.

9. Reinstall battery retainer cover on battery retainer with original two flat head screws and retain the two button head screws for later installation.

10. Remove two button head screws, P/N 1006783-23, self locking nuts, P/N 1012525-004, and spacers, P/N 1015860-026, which secure lower edge of TB2 to PTC case. See figure 1. Retain all hardware for later reassembly.

11. Remove two button head screws, P/N 1006783-104, four self locking nuts, P/N 1012525-004, and two spacers, P/N 1015860-026, which secure upper edge of TB2 and two cable clamps to PTC case. See figure 1. Retain all hardware for later reassembly.

12. Remove one button head screw, P/N 1006783-104, two self locking nuts, P/N 1012525-004, and one spacer, P/N 2025860-026, which secure cable clamp and TB1 to PTC case. See figure 1. Retain all hardware for later reassembly.

VII. B. PROCEDURE (CONTINUED)

13. Remove three button head screws, P/N 1006783-23, self locking nuts, P/N 1012525-004, and spacers, P/N 1015860-026, which secure TB1 to PTC case. See figure 1. Retain all hardware for later reassembly.

14. Remove one button head screw,, P/N 1006783-23, and two self locking nuts, P/N 1012525-004, which secure one cable clamp and electronic component bracket, P/N 2900795, (containing AR1 through AR4) to PTC case. See figure 1. Retain all hardware for later reassembly.

15. Remove two button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004, which secure electronic component bracket, P/N 2900795, to PTC case. See figure 1. Retain all hardware for later reassembly.

16. Remove four button head screws, P/N 1006783-22, which secure relay assembly to PTC case. See figure 1. Retain screws for later reassembly.

17. Remove one button head screw, P/N 1006783-26, and lock washer, P/N MS35338-80, which secure relay assembly to nut sleeve, P/N 2900512-001, and electronic component assembly, P/N 2900521-011.

VII. B. PROCEDURE (CONTINUED)

18. Remove two button head screws, P/N 1006783-23, which secure two sections of each retainer strap on capacitor C3. Remove top section of each retainer strap to permit removal of C3. Retain screws and retainer straps for later reassembly.

19. Remove two button head screws, P/N 1006783-047, spacers, P/N 1015860-017, and self locking nuts, P/N 1016151-010, which secure bell assembly to PTC case. Retain all hardware for later reassembly.

20. Carefully remove wiring harness A, loose parts and assemblies from PTC case and place of workbench.

    a. Remove battery retainer cover, P/N 2900511, by removing two flat head screws, P/N 1010630-13, and retain the screws for later installation.

    b. Connect a 15 ohm variable resistor with an ammeter in series between BT1-(+) and BT8-(-) and proceed with the following steps.

        1) Discharge the battery at a 2.0 ± 0.1 ampere rate.

        2) Monitor individual module voltages; they shall not drop below 3.0 volts, during the first 30 minutes.

VII. B. PROCEDURE (CONTINUED)

        3) Discontinue discharge when total voltage drops below 18 volts or when voltage for individual module drops below 1.8 volts, whichever occurs first.

        4) Recharge at the rate of 100 ma to a cutoff voltage of 4.65 ± 0.05 volts/module, removing each module from the circuit as it attains its cutoff value.

        5) If the 1/2-hour minimum was not obtained in step 2) above, repeat steps 1 through 4.

    c. Install two brackets, P/N 2901587 from kit using two button head screws retained in step B.7.

    d. Remove three screws, P/N 1006783-26 and three washers, P/N MS35338-80 from battery retainer bracket, P/N 2900508. Obtain two cushioning pads from kit, P/N 2901588-002 and place one at each end of the battery (use only one pad if there is insufficient room for both) and reinstall retainer bracket. Secure bracket using only two screws and washers, leaving the hole vacant directly under the amplifier bracket, P/N 2900795. Discard one screw and one washer.

    e. Reinstall battery retainer cover with original flat head screws.

VII. B. PROCEDURE (CONTINUED)

21. Visually check rotary switch S1 to determine if detent disc has "U" or "V" type notches in its periphery. See figures 2 and 3. If detent disc has "V" type notches, obtain straight headed pin, P/N 2901555, from kit and dispose of as directed in section IX of this RIB, and then proceed to step 22. If detent disc has "U" type notches, perform the following:

    a. Remove rotary switch S1 from panel assembly. Retain all parts.

VII. B. PROCEDURE (CONTINUED)

    b. Remove threaded spacer shown in figure 2 which is located adjacent to mid-point of roller arms as follows:

        1) Remove flat head screw which secures threaded spacer to square top plate. Retain screw.

        2) Loosen other screw from bottom of switch assembly and pull out only far enough to enable removal of threaded spacer. Remove and retain threaded spacer.

    c. Disconnect spring from end of roller arms.

    d. Swing roller arms out and away from switch assembly.

    e. Press roller pin out of detent roller and replace with straight headed pin, P/N 2901555, supplied in kit. New pin shall be installed such that head of pin will be nearest to square top plate. Dispose of removed roller pin as directed in section IX of this RIB.

    f. Reconnect spring to roller arms.

    g. Apply MIL-S-22473, grade C, sealing and retaining compound to threads of two screws removed previously from threaded spacer.

VII. B. PROCEDURE (CONTINUED)

h. Insert threaded spacer in original position on switch assembly and thread screw from bottom of switch assembly into threaded spacer.

i. Reinstall flat head screw through square top plate into threaded spacer.

j. Reinstall switch assembly on panel assembly.

22. Remove resistor soldered between terminals 2 and 3 on fuseholder XF1. See figure 4. Dispose of resistor as directed in section IX of this RIB.

23. Replace resistor R16 with resistor 1897260-008, and replace all wires on the same respective terminals (see table 1). Dispose of R16 as directed in section IX of this RIB.

a. Obtain the decal, P/N 2901586 from the kit; remove the paper from the gummed back of the decal; and place it over the "135°" label on the 135° temperature calibration switch.

b. Apply a bead of varnish (MIL-V-6894A unreduced) over the decal.

c. Remove the number 2900501 from the panel and replace it with 2901585.

VII. B. PROCEDURE (CONTINUED)

24. Remove "-011" portion of identification mark "ASSY 2900835-011" on panel assembly and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

25. Remove all leads from relay K4, P/N 1015802-004.

26. Remove relay K4 from relay assembly and dispose of as directed in section IX of this RIB.

27. Replace relay K4 with relay, 1015832-318, and replace all wires on respective terminals. (See table 2).

28. Replace diode CR7 with 1N2976B (1896966-075), being careful to connect the cathode and anode in the same manner that they were for CR7. (See table 2). Dispose of CR7 as directed in section IX of this RIB.

29. Remove "-011" portion of identification mark "ASSY 2900777-011" on relay assembly and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

30. Locate, mark and drill one 0.164 to 0.172 inch diameter through hole in electronic component assembly, P/N 2900521-011, as shown in figure 5. Use number 19 size twist drill to drill hole.

31. Apply MIL-C-5541 chemical film to bare metal on inner surface of newly drilled hole.

VII. B. PROCEDURE (CONTINUED)

32. Mark "K18" on electronic component assembly in location shown in figure 5. Use 1/8 inch high character rubber stamp and black marking ink for new marking.

33. Remove identification mark "2900505" on electronic component assembly and replace with identification mark "2901544". New marking shall be per MIL-STD-130 (ES267).

34. Remove "-011" portion of identification mark "ASSY 2900521-011" and replace with new dash number "-021". New marking shall be per MIL-STD-130. (ES267)

NOTE: When performing next step, insure that relay is positioned such that the shoulder on the relay stud which will protrude through the larger of two holes, sufficiently grips the bracket material. Improper relay positioning will cause the shoulder to be drawn into the hole when the self-locking nuts are tightened.

35. Obtain relay, P/N 1015982-007, two self locking nuts, P/N 1016161-006, and one flat washer, P/N AN960 C6, from kit and secure to electronic component assembly as shown in figure 6.

36. Stamp "CR30" between terminals 3 and 10 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

VII. B. PROCEDURE (CONTINUED)

37. Stamp "CR31" between terminals 3 and 11 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

38. Stamp "R63" between terminals 20 and 25 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

39. Obtain two 1N459 diodes from kit and install one between terminals 3 and 10 and the other between terminals 2 and 11 on TB2, as shown in figure 7. Observe proper anode and cathode connections as shown in figure 7.

40. Obtain resistor, P/N RC20GF431J, from kit and install between terminals 20 and 25 on TB2 as shown in figure 7.

41. Remove resistors as follows:

a. Remove resistor R53, P/N RC32GF510J, located between terminals 26 and 34 on TB2.

b. Remove resistor R57, P/N RC32GF510J, located between terminals 27 and 35 on TB2.

c. Remove resistor R56, P/N RC42GF510J, located between terminals 23 and 26 on TB2.

VII. B. PROCEDURE (CONTINUED)

d. Remove resistor R11, P/N RC32GF101J, located between terminals 28 and 37 on TB2.

e. Remove resistor R25, P/N RC32GF101J, located between terminals 28 and 38 on TB2.

f. Dispose of resistors as directed in section IX of this RIB.

42. Obtain and install the following resistors:

a. Resistor RC42GF121J install between terminals 26 and 34 on TB2.

b. Resistor RC42GF121J install between terminals 27 and 35 on TB2.

c. Resistor RC42GF750J install between terminals 23 and 36 on TB2.

d. Resistor RC20GF301J install between terminals 28 and 37 on TB2.

e. Resistor RC32GF271J install between terminals 28 and 38 on TB2.

43. Using care not to damage sleeving on resistor R10 remove resistor R10, P/N 1016053-003, from between terminals 50 and 58 on TB2. Retain two insulation sleeves from R10 and dispose of R10 as directed in section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

44. Obtain resistor, P/N 1016053-029, from kit and install two sleeves, retained in step 43, on resistor leads. Solder resistor, between terminals 50 and 58 on TB2 as shown in figure 7.

45. Remove resistor R14, P/N RC42GF101J, from between terminals 19 and 30 on TB2. Retain insulation sleeve from R14 and dispose of R14 as directed in section IX of this RIB. Replace R61 with resistor P/N 1016053-024, between terminals 5 and 14 on TB-2. Dispose of old R61 as directed in section IX of this RIB.

46. Obtain resistor, RW55V201 (1896928-068), from kit and install between terminals 19 and 30 on TB2. Insulation sleeve retained in step 45 shall be placed on resistor lead which will be soldered to terminal 30. Reference figure 7.

47. Change wire A135 from terminal 18 to terminal 19 on TB2.

48. Remove diodes CR9 and CR10 which are identical, from terminals 18, 19, and 29 on TB2. Retain CR9 for later use and dispose of CR10 (P/N 1896966-187), as directed in section IX of this RIB. Delete letters CR9 and CR10 from TB2.

49. Remove "-011" portion of identification mark "ASSY 2900778-011" on TB2 and replace with new dash number "-021". New marking shall be in accordance with MIL-STD-130 (ES267).

VII. B. PROCEDURE (CONTINUED)

50. If terminal board (inseparable assembly) (TB2), is marked, P/N 2900519" re-identify as "P/N 2901545". Identification shall be in accordance with MIL-STD-130 (ES267).

51. Bond resistors R10 and R14 to terminal board TB2 per MD 1002203, using epoxy resin, P/N 1010748, curing agent, P/N 1010750, and calcium carbonate filter, P/N 1010749.

52. Remove 1N3030B diodes CR13 and CR14 from TB1-50, 56, and 58, and dispose of as directed in section IX of this RIB. Reference figure 8.

53. Obtain two 1N3029B diodes from kit and install one between terminals 50 and 56 and the other between terminals 50 and 58 on TB1, as shown in figure 8. Observe proper anode and cathode connections shown in figure 8.

54. Remove "-011" portion of identification mark "ASSY 2900513-011" on TB1 and replace with new dash number "-021". New marking shall be in accordance with MIL-STD-130 (ES267).

55. Obtain electronic component bracket, P/N 2901556, two terminal studs, P/N 1896962-003, and two pan head screws, P/N MS35233-12, from kit. Secure terminal studs to component bracket with pan head screws as shown in figure 9. Apply MIL-S-22473, grade C, sealing and retaining compound to threads of two screws prior to installing.

VII. B. PROCEDURE (CONTINUED)

56. Obtain capacitor, P/N CL25BL700UP3, from kit and install between E32 and E33 on electronic component bracket, P/N 2901556, as shown in figure 9. Insure positive lead of capacitor is connected to E32.

57. Remove four button head screws, P/N 1006783-18, flat washers, AN960 C4, and lock washers, P/N MS35338-78, which secure one side of comparators AR1 and AR2 to inner edge of electronic components bracket, P/N 2900795. (Removal of these four screws and associated washers will permit installation of new component bracket as shown in figure 9.) Retain all washers and dispose of four screws as directed in section IX of this RIB.

58. Secure electronic component bracket, P/N 2901556, to electronic component bracket, P/N 2900795, as shown in figure 9, using four button head screws, P/N 1006783-95, (supplied in kit) and washers retained in step 53.

59. Remove capacitor C4 from terminals 37 and 38 of TB3. Dispose of the capacitor as directed in section IX of this RIB. Retain the sleeving for later use.

60. Remove wire AA105 from terminals 47 and 31 of TB3.

VII. B. PROCEDURE (CONTINUED)

78. Obtain new wire list AA leads and required accessory items from kit lead set and install as indicated in table 3. (Notes referenced in the remarks column of table 3 can be found at the end of the table.)

Table 3. Wire List AA Lead Additions

Lead Ident.	From Ckt.Pt.	To Ckt.Pt.	Strip Insul	Tin	Accessory Item P/N	Remarks
AA154	E1		0.20	Yes		See note 1
		K18-2	0.20	Yes	1015864-135	
AA155	K18-5		0.20	Yes	1015864-135	
		K1-4	0.20	Yes	1015864-135	
AA156	E1		0.20	Yes		See note 2
		K18-3	0.20	Yes	1015864-135	See note 3
AA157	K18-6		0.20	Yes	1015864-135	
		E3	0.20	Yes		See note 4
AA158	CR1-A		0.20	Yes	1015864-137	See note 5
		E17	0.20	Yes		See note 6
AA159	TB2-11		0.20	Yes		
		TB2-37	0.20	Yes		
AA160	J1-J		0.20	No		See note 7
		S7SW2-NO	0.30	Yes		Combine with AA43
AA161	TB3-14		0.30	Yes		Combine with B6
		TB3-16	0.30	Yes		Combine with A86
AA162	J1-H		0.20	No		See note 7
		S1A-24	0.30	Yes		Combine with AA25
AA163	E18		0.30	Yes		See note 8
		E3	0.30	Yes		See note 9

VII. B. PROCEDURE (CONTINUED)

Table 3. Wire List AA Lead Additions (Continued)

Note 1 - One more lead (AA156) will be added to this point.
Note 2 - Solder on E1 with leads A33, A79, and AA154.
Note 3 - One more lead (A147) will be added to this point.
Note 4 - One more lead (AA163) will be added to this point.
Note 5 - One more lead (A150) will be added to this point.
Note 6 - Solder on E17 with leads AA66, AA68, and AA69.
Note 7 - Utilize existing contact in connector. Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-20 positioner, Bendix 11-7880-20 extraction tool, and Bendix 11-8107-20 insertion tool.
Note 8 - Solder on E18 with leads A70 and AA72.
Note 9 - Solder on E3 with leads AA73 and AA157.

79. Obtain new wiring harness A leads and required accessory items from kit lead set and install as indicated in table 4. (Notes referenced in the remarks column of table 4 can be found at the end of the table.)

VII. B. PROCEDURE (CONTINUED)

Table 4. Wiring Harness A Lead Additions

Lead Ident.	From Ckt.Pt.	To Ckt.Pt.	Strip Insul	Tin	Accessory Item P/N	Remarks
A144	K18-8		0.30	Yes	1015864-135	
		TB3-15	0.30	Yes		See note 1
A145	TB2-25		0.30	Yes		
		TB3-9	0.30	Yes

		E32	0.30	Yes		
A153	TB2-53		0.30	Yes		See note 6
		E33	0.30	Yes		

Note 1 - Combine with leads A53 and B5 at this point.
Note 2 - Route lead along harness branch near TB3.
Note 3 - See figure 4 for terminal information.
Note 4 - Utilize existing contact in connector. Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-20 positioner, Bendix 11-7880-20 extraction tool, and Bendix 11-8107-20 insertion tool.
Note 5 - Route lead along harness branch near TB2 and TB3.
Note 6 - Route lead along harness branch near TB1.

VII. B. PROCEDURE (CONTINUED)

80. Wrap and spot tie black lacing tape over terminal 3 on fuseholder XF1 (see figure 4) to secure the terminal to the body of the fuseholder. The wrapping should pass over terminal 1 and also cover a small portion of the lead attached to terminal 3.

81. Spot tie new and rerouted leads into applicable harness as necessary, using black lacing tape.

82. Remove identification band marked "2900654" from wiring harness A and replace with kit supplied identification band marked "2901546". Secure new identification band in place with black lacing tape. Dispose of old identification band as indicated in section IX of this RIB.

83. Remove identification band marked "2900655" from wiring harness B and replace with kit supplied identification band marked "2901549". Secure new identification band in place with black lacing tape. Dispose of old identification band as indicated in Section IX of this RIB.

84. Transfer serial number from nameplate on PTC case to new nameplate supplied in kit. Use 1/16 inch high character metal stamp set to imprint data.

85. Remove nameplate from PTC case and dispose of as directed in section IX of this RIB. Retain four screws.

VII. B. PROCEDURE (CONTINUED)

86. Secure new nameplate to PTC case with four screws retained in preceding step. Apply MIL-H-22473, grade H, sealing and retaining compound to threads of four screws prior to installation.

87. Carefully place wiring harness A, attached parts and assemblies into PTC case.

88. Secure bell assembly to PTC case in original position with hardware retained in step 19. Reference figure 1.

89. Secure capacitor C3 to PTC case in original position with hardware retained in steps 6 and 18. Reference figure 1.

90. Secure transformer T1 to PTC case in original position with hardware retained in step 5. Reference figure 1.

91. Secure electronics component assembly, P/N 2900521-021, to PTC case in original position with hardware retained in step 4. Reference figure 1.

92. Secure electronic component bracket, P/N 2900795, to PTC case in original position with hardware retained in steps 14 and 15. Insure cable clamp is located above and between AR4 and AR3. Reference figure 1.

VII. B. PROCEDURE (CONTINUED)

93. Secure TB1 to PTC case in original position with hardware retained in step 13. Do not secure upper left corner (next to R13) to PTC case. Reference figure 1.

94. Install hardware retained in step 12 to upper left corner of TB1.

95. Secure two lower corners of TB2 to PTC case with hardware retained in step 10. Reference figure 1.

96. Install hardware retained in step 11 to two upper corners of TB2.

VII. B. PROCEDURE (CONTINUED)

97. Perform continuity and resistance checks per table 5.

Table 5. Continuity-Resistance Checks

From	To	Indication	Remarks
J1-J	J1-L	<1 OHM	All readings shall be less than 1 ohm
J2-C	TB1-58	↓	
J1-H	S1A-24	↓	
J1-B	J1-L	↓	

98. Using a razor blade and an india ink, make the following changes to the decal on the inside of the PTC cover:

a. Change the schematic drawing number in the upper left-hand corner of the decal from 2900133 to 2901543.

b. Adjacent to the "28 VDC INPUT J1", change TEMP FAIL-ILTC to TEMP FAIL-LTC. Change POWER FAIL-ILTC to POWER FAIL-LTC. After M GROUND, add H BATT HI and J BATT LO.

c. Cover all new lettering with clear lacquer.

VII. PROCEDURE (CONTINUED)

C. RETEST PROCEDURES.

1. Recalibration of bridge excitation voltages.

NOTE: Relay assembly has to be swung up to make potentiometers accessable. Maintain isolation between assembly and case.

a. Make the test setup as indicated in figure 10.

b. Set control decade to 1560.0 ohms and the indicating decade to 2504.5 ohms.

NOTE: Apply only 28 ± 1 VDC power.

2. Control Bridge.

a. Set TEMP. ADJUST potentiometer to center position (11 turns from clockwise). See figure 1.

b. Connect differential voltmeter number 1 to TB2-56 (hi) and TB2-47 (lo).

c. Connect differential voltmeter number 2 to TB2-42 (hi) and TB2-12 (lo).

d. Adjust R33 and R35 on the relay assembly to obtain simultaneous voltages of 1.950 ± 0.020 VDC on differential voltmeter number 1 and 17.4 ± 0.174 VDC on meter number 2.

VII. C. PROCEDURE (CONTINUED)

3. Indicating Bridge.

   a. Connect differential voltmeter number 1 to TB2-52 (hi) and TB2-45 (lo).

   b. Connect differential voltmeter number 2 to TB2-39 (hi) and TB2-54 (lo).

   c. Adjust R18 and R19 to obtain simultaneous voltages of 1.610 ± 0.016 VDC on voltmeter number 1 and 17.6 ± 0.176 VDC on voltmeter number 2.

   d. Turn selector switch on the panel assembly to OFF.

OFF

4. Recalibration of battery cutoff voltage.

   a. Remove electrical tape from lead A11 and connect to the high side of the voltohmmeter with the low side connected to TP2. Remove the electrical tape from lead A82 and connect it to the negative terminal on BT8, after removing the battery cover by removing two flat head screws.
   b. Turn R16 full clockwise. Turn the selector switch to ON.

   c. Apply 36.8 ± 0.1 VDC to TB2-19 high and TP2 low.

VII. C. PROCEDURE (CONTINUED)

   d. Slowly turn R16 counterclockwise until VTVM voltage drops to 28V source voltage. Decrease cutoff supply voltage from 36.8 to approximately 30 volts and momentarily remove the supply voltage.

   e. Slowly increase the cutoff supply voltage and varify that the switchover point is 36.8 ± 0.1 VDC. Adjust R16 and repeat these procedures if necessary.

   f. Remove the cutoff supply voltage; set the selector switch to OFF. Connect lead A11 to the positive terminal of BT1. Apply 115 VAC at J2-M and J2-J. Turn selector switch to ON. Monitor current through A11 with clip-on ammeter. Verify that the charging current drops to zero at a battery terminal voltage at J1-H high and J1-J low of 36.7 ± 0.3 VDC and that individual module (8) voltages do not exceed 4.75 VDC.

   g. Set selector switch to OFF. Obtain cushioning pad, P/N 2901588-001 from kit and place on battery. Reinstall the battery retainer cover on battery retainer with original two flat head screws.

VII. C. PROCEDURE (CONTINUED)

   h. Secure relay assembly to PTC case in original position with hardware retained in step 16. Reference figure 1.

   i. Secure relay assembly to nut sleeve located between relay assembly and electronic component assembly, P/N 2900521-021, with screw retained in step 17.

   j. Place panel assembly in original mounting position in PTC case and secure with six screws retained in step 2.

5. Recalibration of hot alarm set point.

   a. Set selector switch to ON. Set the HI ALARM LIMIT ADJUST potentiometer full clockwisw and monitor pins J3-A and J3-B.

   b. Set indicating decade box to 2225 ohms.

   c. Slowly turn the HI ALARM LIMIT ADJUST potentiomiter counterclockwise until continuity exists at J3-A and J3-B.

   d. Set the indicator decade box to 2500 and press ALARM INHIBITED (SYSTEM RESET) pushbutton to silence the bell and stop the flashing light.

VII. C. PROCEDURE (CONTINUED)

   e. Set the indicator decade box to 2240 ohms, and slowly decrease resistance in 1-ohm steps. Between 2230 and 2220 ohms the bell shall ring, the IMU HOT lamp shall flash, and continuity shall exist at J3-A and J3-B.

   f. Press and hold the ALARM INHIBITED (SYSTEM RESET) pushbutton for this paragraph. Slowly increase the resistance in 1-ohm steps. Before 2270 ohms, the IMU HOT lamp shall extinguish and continuity shall exist at J3-B and J3-C.

   g. Set indicator decade box at 2254.1 ohms. Set the selector to OFF for 5 seconds. Upon reapplication of power, the IMU HOT lamp shall not be flashing.

   h. Adjust HI TEMP ALARM ADJUST to meet conditions of steps e and g above if necessary.

   i. Set indicator decade box to 2201.3 ohms. The alarm bell shall ring, IMU HOT lamp shall flash, and the meter shall read 138.0 ± 0.5°F with or without the 138° CAL pushbutton depressed. Release the 138° CAL pushbutton and set the decade box to 2500 ohms. Return to normal operation by pressing ALARM INHIBITED (SYSTEM RESET) pushbutton.

VII. C. PROCEDURE (CONTINUED)

5. Temperature Alarm Memory

a. With the 125° CAL pushbutton held in the depressed position, the bell shall ring and the IMU COLD lamp shall flash. Press ALARM INHIBITED (SYSTEM RESET) pushbutton. Release the 125° CAL pushbutton and remove input power for 5 seconds. When power is restored the IMU COLD light shall be flashing. Reset the system by pressing the ALARM INHIBITED (SYSTEM RESET) pushbutton.

→ lamp
didn't [illegible]

b. With the 138° CAL pushbutton held in the depressed position, the bell shall ring and the IMU HOT lamp shall flash. Press ALARM INHIBITED (SYSTEM RESET) pushbutton. Release 138° CAL pushbutton and remove input power for 5 seconds. When power is restored the IMU HOT ligh shall be flashing. Reset the system by pressing the ALARM INHIBITED (SYSTEM RESET) pushbutton.

6. Power Output.

a. Apply 25.2 VDC and remove 115VAC. Inhibit the alarm or open the switch S2 for loss of 115VAC. Set the control decade box to 1530 ohms. Multiply the readings of the output ammeter and the output voltage. The results shall be 60 watts minimum.

VII. C. PROCEDURE (CONTINUED)

7. Indicating Bridge Failure.

a. Apply 115 VAC to J2-M and J2-J. Set control decade box so that PTC meter reads 1.5 ± 0.5 amperes. Jumper J2-C to TP4. IMU HOT and IMU COLD lamps shall flash, the alarm bell shall ring, and the PTC meter shall read 1.5 ± 0.5 amps. Remove jumper and reset system by pressing ALARM INHIBITED (SYSTEM RESET) pushbutton.

8. 28V Line Fuse Indication.

a. Remove the 28V fuse with holder. Bell shall ring and POWER FAIL lamp shall light. Reinsert holder without fuse. Lamp in holder shall light. Open switch S1. Bell shall stop ringing and POWER FAIL lamp shall go out, holder lamp shall continue to indicate. Reinsert fuse in fuseholder.

→ 5 [illegible]

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record.

3. Record performance of the modification on the existing Unit History Record sheet (referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain the old Unit History Record sheet in the Acceptance Data Package.

B. Significant part number changes resulting from this modification are as follows:

Name	Pre-modification P/N	Post-modification P/N
Portable Temperature Controller	2900060-011	2900060-021
Panel Assembly	2900835-011	2900835-021
Electronic Component Assembly	2900521-011	2900521-021
Electronic Components Heatsink (Inseparable Assembly)	2900505	2901544

IX. DISPOSITION OF PARTS REMOVED

A. Send relay (K2), P/N 1015802-004, to AC Electronics, Logistics Department, bondroom. Logistics shall utilize this item as a spare.

B. Transfer the following items to full custody of the government via DD543 form (Inventory Schedule).

IX. B. DISPOSITION OF PARTS REMOVED (CONTINUED)

Qty	Part Number	Description

Revision B

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of Portable Temperature Controller (PTC), P/N 2900060-011. This modification will accomplish the following:

1. Insure a power fail alarm occurs when the 28 volt input fuse is blown and power is supplied from 115V source.
2. Stabilize bridge excitation voltage when line voltage is low.
3. Enable operation of Block I IMU without changing the temperature adjustment for Block II.
4. Add filter and change to charging circuit to improve critical battery cutoff operation.
5. Change hot alarm trip point to exclude normal operating range.
6. Provide external means of initiating bridge excitation failure test.
7. Provide external means of monitoring battery voltage.
8. Improve the temp failure latching circuit for loss of external power.
9. Reroute 115V fuse wiring for safer operation.

Sheet 2A of 50
Part No. 0102115
Date: 11 OCT 66
TDRR
Revision C

I. PURPOSE

10. To make the batteries more accessible and provide for more mechanical support.
11. To reduce power to two lamps and relays to rated values.

Qty	Part Number	Description
2	Single pole, single throw	switch
1	HP-428B	DC ammeter
2	Fluke 803B	Differential voltmeter
1	HP-412A Alternate:HP-410C	Voltohmmeter
2	General Radio 1432X Alternate:Rubicon 2015	Decade resistance box
1	Harrison Labs 808A	Power supply
1	Ohmite, 15 ohms, variable, 100 watts minimum	Resistor
AR	MIL-V-6894A unreduced	Varnish

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in Workmanship Standard AC-STD-1, dated 15 January, 1965.

3. Ink markings:

   a. Markings to be removed should be removed with lacquer thinner.

   b. New markings shall be covered with a coat of clear lacquer, after ink has dried.

4. During this modification, lacing may be cut as required to accomplish necessary work. Spot ties shall be added after all conductor rework has been completed.

5. Use heatsink device when unsoldering or soldering near semiconductors.

6. Where marking is specified, hand marking is acceptable.

7. When disassembling the PTC, reinstall loose hardware on major part to insure proper placement and usage of attached hardware upon reassembly. Discard the two nuts. Remove two brackets, P/N 2900510, fastened with two screws, P/N 1010630-13 and two nuts, P/N 1016151-004. Discard brackets, screws and nuts.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Remove top cover from PTC and set aside.

2. Remove six flat head screws, P/N 1010630-38, which secure panel assembly, P/N 2900835-011, to PTC case, P/N 2900525-011. Retain screws for later reassembly.

3. Carefully lift panel assembly out of PTC case and place along side of PTC case.

4. Remove five button head screws, P/N 1006783-22, which secure electronic component assembly, P/N 2900521-011, to bottom of PTC case. See figure 1. Retain screws for later reassembly.

5. Remove four button head screws, P/N 1006783-26, flat washers, P/N AN960-C8, and lock washers, P/N MS35338-80, which secure transformer T1 to bottom of PTC case. See figure 1. Retain all hardware for later reassembly.

6. Remove two button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004, which secure capacitor C3 to side of PTC case. See figure 1. Retain screws and nuts for later reassembly.

VII. B. PROCEDURE (CONTINUED)

7. Remove battery retainer cover, P/N 2900511, by removing two flat head screws, P/N 1010630-13, and two button head screws, P/N 1006783-22 with self locking nuts, P/N 1012525-004.

8. Disconnect lead A11 from positive terminal on BT1 and lead A82 from negative terminal on BT8. Temporarily insulate leads A11 and A82 with electrical tape.

9. Reinstall battery retainer cover on battery retainer with original two flat head screws and retain the two button head screws for later installation.

10. Remove two button head screws, P/N 1006783-23, self locking nuts, P/N 1012525-004, and spacers, P/N 1015860-026, which secure lower edge of TB2 to PTC case. See figure 1. Retain all hardware for later reassembly.

11. Remove two button head screws, P/N 1006783-104, four self locking nuts, P/N 1012525-004, and two spacers, P/N 1015860-026, which secure upper edge of TB2 and two cable clamps to PTC case. See figure 1. Retain all hardware for later reassembly.

12. Remove one button head screw, P/N 1006783-104, two self locking nuts, P/N 1012525-004, and one spacer, P/N 2025860-026, which secure cable clamp and TB1 to PTC case. See figure 1. Retain all hardware for later reassembly.

VII. B. PROCEDURE (CONTINUED)

13. Remove three button head screws, P/N 1006783-23, self locking nuts, P/N 1012525-004, and spacers, P/N 1015860-026, which secure TB1 to PTC case. See figure 1. Retain all hardware for later reassembly.

14. Remove one button head screw, P/N 1006783-23, and two self locking nuts, P/N 1012525-004, which secure one cable clamp and electronic component bracket, P/N 2900795, (containing AR1 through AR4) to PTC case. See figure 1. Retain all hardware for later reassembly.

15. Remove two button head screws, P/N 1006783-22, and self locking nuts, P/N 1012525-004, which secure electronic component bracket, P/N 2900795, to PTC case. See figure 1. Retain all hardware for later reassembly.

16. Remove four button head screws, P/N 1006783-22, which secure relay assembly to PTC case. See figure 1. Retain screws for later reassembly.

17. Remove one button head screw, P/N 1006783-26, and lock washer, P/N MS35338-80, which secure relay assembly to nut sleeve, P/N 2900512-001, and electronic component assembly, P/N 2900521-011.

VII. B. PROCEDURE (CONTINUED)

18. Remove two button head screws, P/N 1006783-23, which secure two sections of each retainer strap on capacitor C3. Remove top section of each retainer strap to permit removal of C3. Retain screws and retainer straps for later reassembly.

19. Remove two button head screws, P/N 1006783-047, spacers, P/N 1015860-017, and self locking nuts, P/N 1016151-010, which secure bell assembly to PTC case. Retain all hardware for later reassembly.

20. Carefully remove wiring harness A, loose parts and assemblies from PTC case and place of workbench.

    a. Remove battery retainer cover, P/N 2900511, by removing two flat head screws, P/N 1010630-13, and retain the screws for later installation.

    b. Connect a 15 ohm variable resistor with an ammeter in series between BT1-(+) and BT8-(-) and proceed with the following steps.

        1) Discharge the battery at a 2.0 ± 0.1 ampere rate.

        2) Monitor individual module voltages; they shall not drop below 3.0 volts, during the first 30 minutes.

VII. B. PROCEDURE (CONTINUED)

        3) Decrease discharge current to 100 ma by increasing resistance when total voltage drops below 18 volts or when voltage for individual module drops below 1.8 volts, whichever occurs first. When any module drops to zero volts either short out module or remove it and continue until all modules are discharged.

        4) Recharge at the rate of 100 ma to a cutoff voltage of 4.65 ± 0.05 volts/module, removing each module from the circuit as it attains its cutoff value.

        5) If the 1/2 hour minimum was not obtained in step 2) above, repeat steps 1 through 4.

    c. Install two brackets, P/N 2901587 from kit using two button head screws retained in step B.7.

    d. Remove three screws, P/N 1006783-26 and three washers, P/N MS35338-80 from battery retainer bracket, P/N 2900508. Obtain two cushioning pads from kit, P/N 2901588-002 and place one at each end of the battery (use only one pad if there is insufficient room for both) and reinstall retainer bracket. Secure bracket using only two screws and washers, leaving the hole vacant directly under the amplifier bracket, P/N 2900795. Discard one screw and one washer.

    e. Reinstall battery retainer cover with original flat head screws.

VII. B. PROCEDURE (CONTINUED)

21. Visually check rotary switch S1 to determine if detent disc has "U" or "V" type notches in its periphery. See figures 2 and 3. If detent disc has "V" type notches, obtain straight headed pin, P/N 2901555, from kit and dispose of as directed in section IX of this RIB, and then proceed to step 22. If detent disc has "U" type notches, perform the following:

    a. Remove rotary switch S1 from panel assembly. Retain all parts.

VII. B. PROCEDURE (CONTINUED)

    b. Remove threaded spacer shown in figure 2 which is located adjacent to mid-point of roller arms as follows:

        1) Remove flat head screw which secures threaded spacer to square top plate. Retain screw.

        2) Loosen other screw from bottom of switch assembly and pull out only far enough to enable removal of threaded spacer. Remove and retain threaded spacer.

    c. Disconnect spring from end of roller arms.

    d. Swing roller arms out and away from switch assembly.

    e. Press roller pin out of detent roller and replace with straight headed pin, P/N 2901555, supplied in kit. New pin shall be installed such that head of pin will be nearest to square top plate. Dispose of removed roller pin as directed in section IX of this RIB.

    f. Reconnect spring to roller arms.

    g. Apply MIL-S-22473, grade C, sealing and retaining compound to threads of two screws removed previously from threaded spacer.

VII. B. PROCEDURE (CONTINUED)

h. Insert threaded spacer in original position on switch assembly and thread screw from bottom of switch assembly into threaded spacer.

i. Reinstall flat head screw through square top plate into threaded spacer.

j. Reinstall switch assembly on panel assembly.

22. Remove resistor soldered between terminals 2 and 3 on fuseholder XF1. See figure 4. Dispose of resistor as directed in section IX of this RIB.

23. Replace resistor R16 with resistor 1897260-008, and replace all wires on the same respective terminals (see table 1). Dispose of R16 as directed in section IX of this RIB.

a. Obtain the decal, P/N 2901586 from the kit; remove the paper from the gummed back of the decal; and place it over the "135°" label on the 135° temperature calibration switch.

b. Apply a bead of varnish (MIL-V-6894A unreduced) over the decal.

c. Remove the number 2900501 from the panel and replace it with 2901585.

VII. B. PROCEDURE (CONTINUED)

24. Remove "-011" portion of identification mark "ASSY 2900835-011" on panel assembly and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

25. Remove all leads from relay K4, P/N 1015802-004.

26. Remove relay K4 from relay assembly and dispose of as directed in section IX of this RIB.

27. Replace relay K4 with relay, 1015832-318, and replace all wires on respective terminals. (See table 2).

28. Replace diode CR7 with 1N2976B (1896966-075), being careful to connect the cathode and anode in the same manner that they were for CR7. (See table 2). Dispose of CR7 as directed in section IX of this RIB.

29. Remove "-011" portion of identification mark "ASSY 2900777-011" on relay assembly and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

30. Locate, mark and drill one 0.164 to 0.172 inch diameter through hole in electronic component assembly, P/N 2900521-011, as shown in figure 5. Use number 19 size twist drill to drill hole.

31. Apply MIL-C-5541 chemical film to bare metal on inner surface of newly drilled hole.

VII. B. PROCEDURE (CONTINUED)

32. Mark "K18" on electronic component assembly in location shown in figure 5. Use 1/8 inch high character rubber stamp and black marking ink for new marking.

33. Remove identification mark "2900505" on electronic component assembly and replace with identification mark "2901544". New marking shall be per MIL-STD-130 (ES267).

34. Remove "-011" portion of identification mark "ASSY 2900521-011" and replace with new dash number "-021". New marking shall be per MIL-STD-130; (ES267)

NOTE: When performing next step, insure that relay is positioned such that the shoulder on the relay stud which will protrude through the larger of two holes, sufficiently grips the bracket material. Improper relay positioning will cause the shoulder to be drawn into the hole when the self-locking nuts are tightened.

35. Obtain relay, P/N 1015982-007, two self locking nuts, P/N 1016161-006, and one flat washer, P/N AN960 C6, from kit and secure to electronic component assembly as shown in figure 6.

36. Stamp "CR30" between terminals 3 and 10 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

VII. B. PROCEDURE (CONTINUED)

37. Stamp "CR31" between terminals 3 and 11 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

38. Stamp "R63" between terminals 20 and 25 on TB2 as shown in figure 7. Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

39. Obtain two 1N459 diodes from kit and install one between terminals 3 and 10 and the other between terminals 3 and 11 on TB2, as shown in figure 7. Observe proper anode and cathode connections as shown in figure 7.

40. Obtain resistor, P/N RC20GF431J, from kit and install between terminals 20 and 25 on TB2 as shown in figure 7.

41. Remove resistors as follows:

a. Remove resistor R53, P/N RC32GF510J, located between terminals 26 and 34 on TB2.

b. Remove resistor R57, P/N RC32GF510J, located between terminals 27 and 35 on TB2.

c. Remove resistor R56, P/N RC42GF510J, located between terminals 23 and 36 on TB2.

VII. B. PROCEDURE (CONTINUED)

d. Remove resistor R11, P/N RC32GF101J, located between terminals 28 and 37 on TB2.

e. Remove resistor R25, P/N RC32GF101J, located between terminals 28 and 38 on TB2.

f. Dispose of resistors as directed in section IX of this RIB.

42. Obtain and install the following resistors:

a. Resistor RC42GF121J install between terminals 26 and 34 on TB2.

b. Resistor RC42GF121J install between terminals 27 and 35 on TB2.

c. Resistor RC42GF750J install between terminals 23 and 36 on TB2.

d. Resistor RC20GF301J install between terminals 28 and 37 on TB2.

e. Resistor RC32GF271J install between terminals 28 and 38 on TB2.

43. Using care not to damage sleeving on resistor R10 remove resistor R10, P/N 1016053-003, from between terminals 50 and 58 on TB2. Retain two insulation sleeves from R10 and dispose of R10 as directed in section IX of this RIB.

VII. B. PROCEDURE (CONTINUED)

44. Obtain resistor, P/N 1016053-029, from kit and install two sleeves, retained in step 43, on resistor leads. Solder resistor, between terminals 50 and 58 on TB2 as shown in figure 7.

45. Remove resistor R14, P/N RC42GF101J, from between terminals 19 and 30 on TB2. Retain insulation sleeve from R14 and dispose of R14 as directed in section IX of this RIB. Replace R61 with resistor P/N 1016053 -024, between terminals 5 and 14 on TB-2. Dispose of old R61 as directed in section IX of this RIB.

46. Obtain resistor, RW69V201 (1896929-068) from kit and install between terminals 19 and 30 on TB2. Mount resistor so that the body does not touch the terminal board. Reference figure 7.

47. Change wire A135 from terminal 18 to terminal 19 on TB2.

48. Remove diodes CR9 and CR10 which are identical, from terminals 18, 19, and 29 on TB2. Retain CR9 for later use and dispose of CR10 (P/N 1896966-187), as directed in section IX of this RIB. Delete letters CR9 and CR10 from TB2.

49. Remove "-011" portion of identification mark "ASSY 2900778-011" on TB2 and replace with new dash number "-021". New marking shall be in accordance with MIL-STD-130 (ES267).

VII. B. PROCEDURE (CONTINUED)

50. If terminal board (inseparable assembly) (TB2), is marked, P/N 2900519" re-identify as "P/N 2901545". Identification shall be in accordance with MIL-STD-130 (ES267).

51. Bond resistors R10 and R14 to terminal board TB2 per ND 1002203, using epoxy resin, P/N 1010748, curing agent, P/N 1010750, and calcium carbonate filter, P/N 1010749.

52. Remove 1N3030B diodes CR13 and CR14 from TB1-50, 56, and 58, and dispose of as directed in section IX of this RIB. Reference figure 8.

53. Obtain two 1N3029B diodes from kit and install one between terminals 50 and 56 and the other between terminals 50 and 58 on TB1, as shown in figure 8. Observe proper anode and cathode connections shown in figure 8.

54. Remove "-011" portion of identification mark "ASSY 2900513-011" on TB1 and replace with new dash number "-021". New marking shall be in accordance with MIL-STD-130 (ES267).

55. Obtain electronic component bracket, P/N 2901556, two terminal studs, P/N 1896962-003, and two pan head screws, P/N MS35233-12, from kit. Secure terminal studs to component bracket with pan head screws as shown in figure 9. Apply MIL-S-22473, grade C, sealing and retaining compound to threads of two screws prior to installing.

VII. B. PROCEDURE (CONTINUED)

56. Obtain capacitor, P/N CL25BL700UP3, from kit and install between E32 and E33 on electronic component bracket, P/N 2901556, as shown in figure 9. Insure positive lead of capacitor is connected to E32.

57. Remove four button head screws, P/N 1006783-18, flat washers, AN960 C4, and lock washers, P/N MS35338-78, which secure one side of comparators AR1 and AR2 to inner edge of electronic components bracket, P/N 2900795. (Removal of these four screws and associated washers will permit installation of new component bracket as shown in figure 9.) Retain all washers and dispose of four screws as directed in section IX of this RIB.

58. Secure electronic component bracket, P/N 2901556, to electronic component bracket, P/N 2900795, as shown in figure 9, using four button head screws, P/N 1006783-95, (supplied in kit) and washers retained in step 53.

59. Remove capacitor C4 from terminals 37 and 38 of TB3. Dispose of the capacitor as directed in section IX of this RIB. Retain the sleeving for later use.

60. Remove wire AA105 from terminals 47 and 31 of TB3.

VII. B. PROCEDURE (CONTINUED)

61. Move wire B32 of the B harness from terminal 47 to terminal 31 of TB3.

62. Move wire A82 of the A harness from terminal 47 to terminal 31 of TB3.

63. Move wire B36 of the B harness from terminal 38 to terminal 47 of TB3.

64. Remove the "C4" marking on electronic component assembly and replace it with "CR9". Marking shall be 1/12 inch high, black in color and in accordance with ND 1002019.

65. Install diode CR9 which was removed in step 51, between terminals 38 and 47 of TB3 with cathode end attached to terminal 47. Install sleeving removed in step 59.

66. Interchange wires AA18 and A34 on fuseholder XF2. (See table 2.)

67. Interchange wires AA22 and A35 on fuseholder XF3. (See table 2.)

68. Remove "-011" portion of identification "ASSY 2900522-011" and replace with new dash number "-021". New marking shall be per MIL-STD-130 (ES267).

VII. B. PROCEDURE (CONTINUED)

NOTE: If P/N 2901523 is marked on the inseparable assembly, the marking shall be removed and replaced with "P/N 2901583".

69. Remove jumper wire AA118 from between TB3-7 and TB3-9.

70. Change lead on diode CR27 from TB3-8 to TB3-7.

71. Change wire B7 from TB3-8 to TB3-7.

72. DELETED ~~Change wire A53 from TB3-15 to TB3-9.~~

73. Remove the "CR27" marking from the inseparable assembly and replace it with "CR10". Marking shall be 0.09 inch high per ND 1002019 and black in color.

74. Add diode CR10 (1N459) between TB3-15 and TB3-8 with the cathode at TB3-15. This is a new CR10 and is not to be confused with the one that was removed in step 29.

75. DELETED ~~Change wire A145 from TB3-9 to TB3-8.~~

VII. B. PROCEDURE (CONTINUED)

76. Completely remove leads listed in table 1. Do not remove any other leads which may be connected to the listed termination points in table 1.

Table 1. PTC Lead Deletions

Lead Ident.	From Ckt. Pt.	To Ckt. Pt.	Remarks
AA84	CR1-C	E1	
AA85	K1-4	E1	
AA119	TB3-14	TB3-15	
AA120	TB3-15	TB3-16

*One more lead (AA163) will be added to this point later.

**Lead was previously removed from this point.

***Two more leads (AA154 and AA156) will be added to this point later.

~~****One more lead (A144) will be added to this point later.~~

VII. B. PROCEDURE (CONTINUED)

78. Obtain new wire list AA leads and required accessory items from kit lead set and install as indicated in table 3. (Notes referenced in the remarks column of table 3 can be found at the end of the table.)

Table 3. Wire List AA Lead Additions

Lead Ident.	From Ckt. Pt.	To Ckt. Pt.	Strip Insul	Tin	Accessory Item P/N	Remarks

VII. B. PROCEDURE (CONTINUED)

Table 3. Wire List AA Lead Additions (Continued)

Note 1 - One more lead (AA156) will be added to this point.
Note 2 - Solder on E1 with leads A33, A79, and AA154.
Note 3 - One more lead (A147) will be added to this point.
Note 4 - One more lead (AA163) will be added to this point.
Note 5 - One more lead (A150) will be added to this point.
Note 6 - Solder on E17 with leads AA66, AA68, and AA69.
Note 7 - Utilize existing contact in connector. Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-20 positioner, Bendix 11-7880-20 extraction tool, and Bendix 11-8107-20 insertion tool.
Note 8 - Solder on E18 with leads A70 and A72.
Note 9 - Solder on E3 with leads AA73 and AA157.

79. Obtain new wiring harness A leads and required accessory items from kit lead set and install as indicated in table 4. (Notes referenced in the remarks column of table 4 can be found at the end of the table.)

VII. B. PROCEDURE (CONTINUED)

		E33	0.30	Yes		

Note 1 - Combine with leads A53 and B5 at this point.
Note 2 - Route lead along harness branch near TB3.
Note 3 - See figure 4 for terminal information.
Note 4 - Utilize existing contact in connector. Use Buchanan MS3191-1 crimping tool with Buchanan MS3191-20 positioner, Bendix 11-7880-20 extraction tool, and Bendix 11-8107-20 insertion tool.
Note 5 - Route lead along harness branch near TB2 and TB3.
Note 6 - Route lead along harness branch near TB1.

VII. B. PROCEDURE (CONTINUED)

80. Wrap and spot tie black lacing tape over terminal 3 on fuseholder XF1 (see figure 4) to secure the terminal to the body of the fuseholder. The wrapping should pass over terminal 1 and also cover a small portion of the lead attached to terminal 3.

81. Spot tie new and rerouted leads into applicable harness as necessary, using black lacing tape.

82. Remove identification band marked "2900654" from wiring harness A and replace with kit supplied identification band marked "2901546". Secure new identification band in place with black lacing tape. Dispose of old identification band as indicated in section IX of this RIB.

83. Remove identification band marked "2900655" from wiring harness B and replace with kit supplied identification band marked "2901549". Secure new identification band in place with black lacing tape. Dispose of old identification band as indicated in Section IX of this RIB.

84. Transfer serial number from nameplate on PTC case to new nameplate supplied in kit. Use 1/16 inch high character metal stamp set to imprint data.

85. Remove nameplate from PTC case and dispose of as directed in section IX of this RIB. Retain four screws.

VII. B. PROCEDURE (CONTINUED)

86. Secure new nameplate to PTC case with four screws retained in preceeding step. Apply MIL-H-22473, grade H, sealing and retaining compound to threads of four screws prior to installation.

87. Carefully place wiring harness A, attached parts and assemblies into PTC case.

88. Secure bell assembly to PTC case in original position with hardware retained in step 19. Reference figure 1.

89. Secure capacitor C3 to PTC case in original position with hardware retained in steps 6 and 18. Reference figure 1.

90. Secure transformer T1 to PTC case in original position with hardware retained in step 5. Reference figure 1.

91. Secure electronics component assembly, P/N 2900521 -021, to PTC case in original position with hardware retained in step 4. Reference figure 1.

92. Secure electronic component bracket, P/N 2900795, to PTC case in original position with hardware retained in steps 14 and 15. Insure cable clamp is located above and between AR4 and AR3. Reference figure 1.

VII. B. PROCEDURE (CONTINUED)

93. Secure TB1 to PTC case in original position with hardware retained in step 13. Do not secure upper left corner (next to R13) to PTC case. Reference figure 1.

94. Install hardware retained in step 12 to upper left corner of TB1.

95. Secure two lower corners of TB2 to PTC case with hardware retained in step 10. Reference figure 1.

96. Install hardware retained in step 11 to two upper corners of TB2.

VII. B. PROCEDURE (CONTINUED)

97. Perform continuity and resistance checks per table 5.

Table 5. Continuity-Resistance Checks

From	To	Indication	Remarks
J1-J	J1-L	<1 OHM	All readings shall be less than 1 ohm
J2-C	TB1-58	↓	
J1-H	S1A-24	↓	
J1-B	J1-L	↓	

98. Using a razor blade and india ink, make the following changes to the decal on the inside of the PTC cover:

a. Change the schematic drawing number in the upper left-hand corner of the decal from 2900133 to 2901543.

b. Adjacent to the "28 VDC INPUT J1", change TEMP FAIL-ILTC to TEMP FAIL-LTC. Change POWER FAIL-ILTC to POWER FAIL-LTC. After M GROUND, add H BATT HI and J BATT LO.

c. Cover all new lettering with clear lacquer.

VII. PROCEDURE (CONTINUED)

C. RETEST PROCEDURES.

1. Recalibration of bridge excitation voltages.

NOTE: Relay assembly has to be swung up to make potentiometers accessable. Maintain isolation between assembly and case.

a. Make the test setup as indicated in figure 10.

b. Set control decade to 1560.0 ohms and the indicating decade to 2504.5 ohms.

NOTE: Apply only 28 ± 1 VDC power.

2. Control Bridge.

a. Set TEMP. ADJUST potentiometer to center position (11 turns from clockwise). See figure 1.

b. Connect differential voltmeter number 1 to TB2-56 (hi) and TB2-47 (lo).

c. Connect differential voltmeter number 2 to TB2-42 (hi) and TB2-12 (lo).

d. Adjust R33 and R35 on the relay assembly to obtain simultaneous voltages of 1.950 ± 0.020 VDC on differential voltmeter number 1 and 17.4 ± 0.174 VDC on meter number 2.

VII. C. PROCEDURE (CONTINUED)

3. Indicating Bridge.

   a. Connect differential voltmeter number 1 to TB2-52 (hi) and TB2-45 (lo).

   b. Connect differential voltmeter number 2 to TB2-39 (hi) and TB2-54 (lo).

   c. Adjust R18 and R19 to obtain simultaneous voltages of 1.610 ± 0.016 VDC on voltmeter number 1 and 17.6 ± 0.176 VDC on voltmeter number 2.

   d. Turn selector switch on the panel assembly to OFF.

4. Recalibration of battery cutoff voltage.

   a. Remove electrical tape from lead A11 and connect to the high side of the voltohmmeter with the low side connected to TP2. Remove the electrical tape from lead A82 and connect it to the negative terminal on BT8, after removing the battery cover by removing two flat head screws.
   b. Turn R16 full clockwise. Turn the selector switch to ON.

   c. Apply 36.8 ± 0.1 VDC to TB2-19 high and TP2 low.

VII. C. PROCEDURE (CONTINUED)

   d. Slowly turn R16 counterclockwise until VTVM voltage drops to 28V source voltage. Decrease cutoff supply voltage from 36.8 to approximately 30 volts and momentarily remove the supply voltage.

   e. Slowly increase the cutoff supply voltage and varify that the switchover point is 36.8 ± 0.1 VDC. Adjust R16 and repeat these procedures if necessary.

   f. Remove the cutoff supply voltage; set the selector switch to OFF. Connect lead A11 to the positive terminal of BT1. Apply 115 VAC at J2-M and J2-J. Turn selector switch to ON. Monitor current through A11 with clip-on ammeter. Verify that the charging current drops to zero at a battery terminal voltage at J1-H high and J1-J low of 36.7 ± 0.3 VDC and that individual module (8) voltages do not exceed 4.75 VDC.

   g. Set selector switch to OFF. Obtain cushioning pad, P/N 2901588-001 from kit and place on battery. Reinstall the battery retainer cover on battery retainer with original two flat head screws.

VII. C. PROCEDURE (CONTINUED)

   h. Secure relay assembly to PTC case in original position with hardware retained in step 16. Reference figure 1.

   i. Secure relay assembly to nut sleeve located between relay assembly and electronic component assembly, P/N 2900521-021, with screw retained in step 17.

   j. Place panel assembly in original mounting position in PTC case and secure with six screws retained in step 2.

5. Recalibration of hot alarm set point.

   a. Set selector switch to ON. Set the HI ALARM LIMIT ADJUST potentiometer full clockwisw and monitor pins J3-A and J3-B.

   b. Set indicating decade box to 2225 ohms.

   c. Slowly turn the HI ALARM LIMIT ADJUST potentiomiter counterclockwise until continuity exists at J3-A and J3-B.

   d. Set the indicator decade box to 2500 and press ALARM INHIBITED (SYSTEM RESET) pushbutton to silence the bell and stop the flashing light.

VII. C. PROCEDURE (CONTINUED)

   e. Set the indicator decade box to 2240 ohms, and slowly decrease resistance in 1-ohm steps. Between 2230 and 2220 ohms the bell shall ring, the IMU HOT lamp shall flash, and continuity shall exist at J3-A and J3-B.

   f. Press and hold the ALARM INHIBITED (SYSTEM RESET) pushbutton for this paragraph. Slowly increase the resistance in 1-ohm steps. Before 2270 ohms, the IMU HOT lamp shall extinguish and continuity shall exist at J3-B and J3-C.

   g. Set indicator decade box at 2254.1 ohms. Set the selector to OFF for 5 seconds. Upon reapplication of power, the IMU HOT lamp shall not be flashing.

   h. Adjust HI TEMP ALARM ADJUST to meet conditions of steps e and g above if necessary.

   i. Set indicator decade box to 2201.3 ohms. The alarm bell shall ring, IMU HOT lamp shall flash, and the meter shall read 138.0 ± 0.5°F with or without the 138° CAL pushbutton depressed. Release the 138° CAL pushbutton and set the decade box to 2500 ohms. Return to normal operation by pressing ALARM INHIBITED (SYSTEM RESET) pushbutton.

VII. C. PROCEDURE (CONTINUED)

5. Temperature Alarm Memory

a. With the 125° CAL pushbutton held in the depressed position, the bell shall ring and the IMU COLD lamp shall flash. Press ALARM INHIBITED (SYSTEM RESET) pushbutton. Release the 125° CAL pushbutton and remove input power for 5 seconds. When power is restored the IMU COLD light shall be flashing. Reset the system by pressing the ALARM INHIBITED (SYSTEM RESET) pushbutton.

b. With the 138° CAL pushbutton held in the depressed position, the bell shall ring and the IMU HOT lamp shall flash. Press ALARM INHIBITED (SYSTEM RESET) pushbutton. Release 138° CAL pushbutton and remove input power for 5 seconds. When power is restored the IMU HOT ligh shall be flashing. Reset the system by pressing the ALARM INHIBITED (SYSTEM RESET) pushbutton.

6. Power Output.

a. Apply 25.2 VDC and remove 115VAC. Inhibit the alarm or open the switch S2 for loss of 115VAC. Set the control decade box to 1530 ohms. Multiply the readings of the output ammeter and the output voltage. The results shall be 60 watts minimum.

VII. C. PROCEDURE (CONTINUED)

7. Indicating Bridge Failure.

a. Apply 115 VAC to J2-M and J2-J. Set control decade box so that PTC meter reads 1.5 ± 0.5 amperes. Jumper J2-C to TP4. IMU HOT and IMU COLD lamps shall flash, the alarm bell shall ring, and the PTC meter shall read 1.5 ± 0.5 amps. Remove jumper and reset system by pressing ALARM INHIBITED (SYSTEM RESET) pushbutton.

8. 28V Line Fuse Indication.

a. Remove the 28V fuse with holder. Bell shall ring and POWER FAIL lamp shall light. Reinsert holder without fuse. Lamp in holder shall light. Open switch S1. Bell shall stop ringing and POWER FAIL lamp shall go out, holder lamp shall continue to indicate. Reinsert fuse in fuseholder.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record.

3. Record performance of the modification on the existing Unit History Record sheet (referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain the old Unit History Record sheet in the Acceptance Data Package.

B. Significant part number changes resulting from this modification are as follows:

Name	Pre-modification P/N	Post-modification P/N
Portable Temperature Controller	2900060-011	2900060-021
Panel Assembly	2900835-011	2900835-021
Electronic Component Assembly	2900521-011	2900521-021
Electronic Components Heatsink (Inseparable Assembly)	2900505	2901544

VIII. B. MODIFICATION DESIGNATION (CONTINUED)

Name	Pre-modification P/N	Post-modification P/N
Relay Assembly	2900777-011	2900777-021
Electronic Components Assembly	2900513-011	2900513-021
Electronic Components Assembly	2900778-011	2900778-021
Terminal Board (Inseparable Assembly)	2900519	2901545
Terminal Board (Inseparable Assembly)	2900523	2901583
Wiring Harness A	2900654	2901546
Wiring Harness B	2900655	2901549
Lead Set AA	2900656	2901550
Electronic Components Assembly	2900522-011	2900522-021

IX. DISPOSITION OF PARTS REMOVED

A. Send relay (K2), P/N 1015802-004, to AC Electronics, Logistics Department, bondroom. Logistics shall utilize this item as a spare.

B. Transfer the following items to full custody of the government via DD543 form (Inventory Schedule).

Sheet 41 of 50

Revision A

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to define the modification and retest procedures which must be performed to retrofit the Optics Inertial Analyzer (OIA), P/N 2900023-031.

II. AUTHORITY

NAS 9-497 SA42
This retrofit is authorized by Marriage Kit 3.

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Optics Inertial Analyzer	2900023-031	2900023-041

IV. PRIORITY CHANGES

Not applicable.

V. RELATED CHANGES

RIB 0102116 and RIB 0102123

Sheet 3 of 5
Part No. 0102119
Date: 14 JUL 66
TDRR
Revision A

VI. MATERIAL REQUIRED

A. One retrofit kit, P/N 8102251, consisting of the following items is required to accomplish this modification.

Qty	Part Number	Description
1	8102254	Retrofit Kit for Test Selector Assembly, P/N 2900028-021
1	0102119	Retrofit Instruction Bulletin
1	1004260-536	Nameplate
1	8102257	Retrofit Kit for Monitor Panel Assembly, P/N 2900031-031

B. Materials and special tools required but not supplied in the retrofit kit are referenced in RIB 0102116.

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to performing modification-retest of Optics Inertial Analyzer (OIA).
2. All workmanship shall meet the requirements defined in Workmanship Standard AC-STD-1, dated 15 January 1965.

Sheet 4 of 5
Part No. 0102119
Date: 14 JUL 66
TDRR
Revision A

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS.

1. Remove Test Selector Assembly, P/N 2900028-021, and Monitor Panel Assembly, P/N 2900031-031, from OIA, using standard removal procedures.
2. Modify removed Test Selector Assembly as directed in RIB 0102116, using retrofit kit P/N 8102254.
3. Modify removed Monitor Panel Assembly as directed in RIB 0102123, using retrofit kit P/N 8102257.
4. Reinstall modified Test Selector Assembly and Monitor Panel Assembly, using standard reinstallation procedures.
5. Transfer serial number from old nameplate to new nameplate, P/N 1004260-536, supplied in kit. Use metal stamp set with 1/8 inch numerals and letters for imprinting data.
6. Carefully remove four screws securing old nameplate to OIA cabinet. Retain screws.
7. Install new nameplate, P/N 1004260-536, in same location as nameplate removed in step 6. Secure with screws retained in step 6.
8. Retest OIA in accordance with retest procedures referenced in detailed RIB.

VIII. MODIFICATION DESIGNATION

A. The following part number changes resulted from this modification

Pre-modification P/N	Item Name	Post-modification P/N
2900023-031	Optics Inertial Analyzer	2900023-041
2900028-021	Test Selector Assembly	2900028-031
2900031-031	Monitor Panel Assembly	2900031-041

B. Update the Acceptance Data Package as follows:

1. Insert Kit Acceptance Data List into Unit Acceptance Data List.

2. Make necessary entry into Equipment Inventory Record.

3. Record modification in existing Unit History Record, denoting this RIB.

4. Start a new Unit History Record sheet for the changed part number. Retain the old Unit History Record sheet in the Acceptance Data Package.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed OIA nameplate via AC Electronics from MIL-127 or equivalent.

RETROFIT INSTRUCTION BULLETIN (RIB) FOR INTERCONNECT CABLE SET, (SPECIAL BLK II) P/N 2900712-031

ORIGINATOR: AC ELECTRONICS DIVISION, GMC

REVISION LETTER	TDRR	PAGES REVISED	APPROVALS		DATE
			CCB	NASA	
A	32123	ALL INITIAL RELEASE		—	11/29/66
B	33273	ALL			27 MAR 67 ems

Prepared by Konrad K Konietzke Date 28 July 1966

P.C. Engineering Approval Date 8/29/66

Design Review Board Approval Date 10-14-66

MIT/IL Approval Date

NASA Approval Date 11/22/66

MIT Reliability Date

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Interconnect Cable Set, P/N 2900712-031. A switch of YAW and ROLL CDU attitude error signals in Blk II G/N harness requires a similar change in the GSE cable. Additional changes are also being made to the cable set to ruggedize the cable connectors.

II. AUTHORITY

The retrofit is authorized by Marriage Kit 3.

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Interconnect Cable Set (Special Blk II)	2900712-031	2900712-041

2	2901590-001	Gasket

VI. MATERIAL REQUIRED (CONTINUED)

B. Retrofit Kit, P/N 8102259, consisting of the following items is required to modify cable assembly W154, P/N 2901469:

Qty	Part Number	Description
1	0102122	Retrofit Instruction Bulletin
1	1016128-011	Identification band

C. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
AR	MIL-T-713B	Lacing tape, type P, class 2, black
AR	N/A	Marking India ink
1	Schwaab Stamp & Seal Co., type AAG-0	Rubber stamp, 1/8 inch, 13 band alpha numerical
AR	N/A	Clear lacquer (MIL-L-73A)
1	Black & Decker, P/N 30	Drill, hand portable, electric
1	Cleveland Twist Drill Co, 52	No. 52 drill
AR	1006692-2	Tape, pressure sensitive
AR	1006458-004	Tape, lacing and tying
AR	MIL-I-631 Type F, Form T, Grade A, Black	Tape, filler (.020 thick and 5/8 inch wide)

VI. C. MATERIAL REQUIRED (CONTINUED)

Qty	Part Number	Description
AR	MIL-A-5092B, Type II	Adhesive, Rubber Base
1	ND1002151	Bonding Spec
AR	Snap-On Tools Corporation AW-1018K	Hex Key Set (Allen Wrenches)

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and completely understand RIB prior to attempting this modification.

2. All workmanship shall meet the requirements defined in AC Workmanship Standard AC-STD-1, dated 15 January 1965.

3. Ink Markings.

   a. New markings shall be covered with a coat of clear flat lacquer after ink has dried.

   b. New markings shall meet requirements of ND1002019.

VII. A. PROCEDURE (CONTINUED)

4. When marking is specified, hand marking is acceptable.

5. Lacing cut shall be replaced using black lacing tape, type P, Class 2, in accordance with MIL-T-713B.

6. Following are approved methods of which the required wire slack may be obtained when installing new clamp and gasket assemblies:

   NOTE: Two people are required to perform the following methods.

   NOTE: Use filler tape or adhesive tape to ensure that shoulder screws do not damage wire insulation during assembly.

VII. A. PROCEDURE (CONTINUED)

a. Without removing or disturbing existing tape or spot-ties, push wire bundle toward connector base (pull leads to gain as much available slack as possible). If required, trim zipper tubing to ensure that it will not restrict the shaping of the lead bundle entering the fixed clamp. Install new movable clamp and tighten until shoulder screws are seated (see Figure 3). Check to ensure that pins at connector are secured properly and wrap-posts are not bent, and that there is no strain or pressure between movable clamp and connector. Flex cable at rear of connector shell half and visually check to ensure no movement is transmitted through the movable clamp and observed between the clamp and connector base. If movement is transmitted through movable clamp, remove clamp, add filler tape, or adhesive tape, replace movable clamp and perform above check. Continue this procedure until desired results indicated above are obtained.

b. If required slack cannot be obtained without removing spot-ties and tape, proceed as follows:

   1) Remove existing spot-ties, filler tape and adhesive tape as required.

VII. A. PROCEDURE (CONTINUED)

   2) Push wire bundle(s) toward connector base until desired slack is obtained. It may be necessary to mark and remove upper two or three rows of pins, fold back, work slack first at lower tiers of wiring and then the upper, and then reinstall removed pins.

   3) After desired slack is obtained, install movable clamp (see Figure 3). Check to ensure that pins at connector are secured properly and wrap-posts are not bent, and that there is no strain or pressure between movable clamp and connector. Flex cable at rear of connector shell half and perform same check as in step "a".

   4) Add spot-ties and adhesive tape as required.

B. DETAILED PROCEDURES. Perform modification as follows:

1. Obtain and modify cable assembly W148, P/N 2901212, in accordance with paragraph D.

2. Obtain and modify cable assembly W149, P/N 2901485, in accordance with paragraph E.

3. Obtain and modify cable assembly W152, P/N 2900659, in accordance with paragraph F.

VII. B. PROCEDURE (CONTINUED)

4. Obtain and modify cable assembly W154, P/N 2901469, in accordance with paragraph G.

5. Obtain and modify cable assembly W156, P/N 2900663, in accordance with paragraph H.

6. Obtain and modify cable assembly W158, P/N 2900664, in accordance with paragraph I.

C. Externally Relieved Body Screw, P/N 2900676-002. Perform modification as follows:

1. Remove retaining ring, P/N MS16633-4015, from each screw.

2. Remove screws from connector block. Retain two (2) washers, P/N 1897324-002, from each screw assembly.

3. Locate and drill a 0.062 - 0.065 inch hole in each removed screw using a number 52 drill. Locate and drill hole per Figure 1.

4. Obtain flat washers, P/N 1897324-002, and pins, P/N MS171433, from retrofit kit, Obtain washers retained in step 2.

5. Install washer on screw and install screw through connector block. See Figure 2.

VII. C. PROCEDURE (CONTINUED)

6. Install two (2) washers per Figure 2.

7. Install pin through drilled hole. See Figure 2. Center pin.

D. Retrofit Cable Assembly W148, P/N 2901212, as follows:

1. Remove externally relieved body screws, P/N 2900676-002, and modify per VII.C, steps 1 through 3.

2. Place connector(s) on flat working surface with back shell half containing no rivets facing up.

3. Remove screws holding shell halves together. Remove screws holding shell half containing no rivets to connector base. Retain screws.

4. Remove shell half.

5. Remove internal movable clamp(s). Where more than one internal clamp exists, one may be left in place while working on the other. Retain shoulder screws.

6. Obtain movable clamps and gaskets from kit and bond gaskets to clamps per table 2 and figure 3. Use MIL-A-5092, Type II, adhesive per ND 1002151 for bonding instructions.

VII. D. PROCEDURE (CONTINUED)

NOTE: Careful visual inspection is required to perform step 7 correctly.

7. Place each new movable clamp in position in accordance with Figure 3. Press movable clamp into position and note effect on wiring to connector base. If any lateral pressure is evident, additional wire slack must be provided to ensure all slide-on sockets seat fully on wire-wrap posts in the connector base without bending. If additional slack is required, perform VII.A., step 6, before proceeding. Secure movable clamp using shoulder screw retained in step 5.

8. Secure wire bundle(s) in grommet(s) at rear of retained connector half-shell. Test fit removed half shell for proper fit. Use tape as required to obtain proper fit.

9. Perform continuity check of modified connectors per cable P/N drawings. (See table 2).

10. Reassemble removed half-shell using screws retained in step 3.

11. Install modified externally relieved body screws per VII.C, steps 4 through 7.

VII. D. PROCEDURE (CONTINUED)

12. Update applicable records per section VIII.

13. Dispose of removed parts per section IX.

E. Retrofit Cable Assembly W149, P/N 2901485, as follows:

1. Remove externally relieved body screws, P/N 2900676-002, and modify per VII.C, steps 1 through 3.

2. Place connector(s) on flat working surface with back shell half containing no rivets facing up.

3. Remove screws holding shell halves together. Remove screws holding shell half containing no rivets to connector base. Retain screws.

4. Remove shell half.

5. Remove internal movable clamp(s). Where more than one internal clamp exists, one may be left in place while working on the other. Retain shoulder screws.

6. Obtain movable clamps and gaskets from kit and bond gaskets to clamps per table 2 and figure 3. Use MIL-A-5092, type II, adhesive per ND 1002151 for bonding instructions.

VII. E. PROCEDURE (CONTINUED)

NOTE: Careful visual inspection is required to perform step 7 correctly.

7. Place each new movable clamp in position in accordance with figure 3. Press movable clamp into position and note effect on wiring to connector base. If any lateral pressure is evident, additional wire slack must be provided to ensure all slide-on sockets seat fully on wire-wrap posts in the connector base without bending. If additional slack is required, perform VII.A, step 6, before proceeding. Secure movable clamp using shoulder screw retained in step 5.

8. Secure wire bundle(s) in grommet(s) at rear of retained connector half-shell. Test fit removed half shell for proper fit. Use tape as required to obtain proper fit.

9. Perform continuity check of modified connectors per cable P/N drawings. (See table 2).

10. Reassemble removed half-shell using screws retained in step 3.

11. Install modified externally relieved body screws per VII.C, steps 4 through 7.

VII. E. PROCEDURE (CONTINUED)

12. Update applicable records per section VIII.

13. Dispose of removed parts per section IX.

F. Retrofit Cable Assembly W152, P/N 2900659, as follows:

1. Remove externally relieved body screws, P/N 2900676 -002 and modify per VII.C, steps 1 through 3.

2. Place connector(s) on flat working surface with back shell half containing no rivets facing up.

3. Remove screws holding shell halves together. Remove screws holding shell half containing no rivets to connector base. Retain screws.

4. Remove shell half.

5. Remove internal movable clamps(s). Where more than one internal clamp exists, one may be left in place while working on the other. Retain shoulder screws.

6. Obtain movable clamps and gaskets from kit and bond gaskets to clamps per table 2 and figure 3. Use MIL-A-5092, type II, adhesive per ND 1002151 for bonding instructions.

VII. F. PROCEDURE (CONTINUED)

NOTE: Careful visual inspection is required to perform step 7 correctly.

7. Place each new movable clamp in position in accordance with figure 3. Press movable clamp into position and note effect on wiring to connector base. If any lateral pressure is evident, additional wire slack must be provided to ensure all slide-on sockets seat fully on wire-wrap posts in the connector base without bending. If additional slack is required, perform VII.A, step 6, before proceeding. Secure movable clamp using shoulder screw retained in step 5.

8. Secure wire bundle(s) in grommet(s) at rear of retained connector half-shell. Test fit removed half shell for proper fit. Use tape as required to obtain proper fit.

9. Perform continuity check of modified connectors per cable P/N drawings. (See table 2).

10. Reassemble removed half-shell using screws retained in step 3.

11. Install modified externally relieved body screws per VII.C, steps 4 through 7.

VII. F. PROCEDURE (CONTINUED)

12. Update applicable records per section VIII.

13. Dispose of removed parts per section IX.

G. Retrofit Cable Assembly W154, P/N 2901469, as follows:

CAUTION: The following steps must be performed with care to insure that leads do not pull off connector base.

1. Viewing face of plug P4, remove four (4) recessed socket head screws adjacent to connector contact pins 601 through 650, using a 3/32 allen wrench. Retain screws.

2. Remove three (3) button head screws, P/N 1006783-19, from plug backshell using 1/16 allen wrench. Retain screws.

3. Remove loosened half of connector backshell.

4. Anchor cable to prevent any relative movement between cable and P4 connector.

5. Disassemble strain relief clamp inside P4 connector backshell as required to perform modification.

VII. G. PROCEDURE (CONTINUED)

6. Remove, reverse, and reinsert pins 432 and 133.
7. Remove, reverse, and reinsert pins 532 and 233.
8. Remove, reverse, and reinsert pins 632 and 333.
9. Spot tie as applicable using black lacing tape.
10. Assemble strain relief clamp inside P4 connector backshell.
11. Install half of connector backshell using three (3) button head screws, P/N 1006783-19, removed in step 2. Use 1/16 allen wrench.
12. Install four (4) socket head screws adjacent to connector contact pins 601 through 650 using screws retained in step 1. Use 3/32 allen wrench.
13. Perform continuity resistance check per table 1.
14. Obtain kit identification band, P/N 1016128-011, and mark with new cable P/N 2901566.
15. Obtain serial number from old identification band and mark on new identification band.
16. Remove old identification band and replace with new identification band using black lacing tape.

VII. G. PROCEDURE (CONTINUED)

17. Dispose of old identification band in accordance with section IX.
18. Remove externally relieved body screws, P/N 2900676 -002, and modify per VII.C, steps 1 through 3.
19. Place connector(s) on flat working surface with back shell half containing no rivets facing up.
20. Remove screws holding shell halves together. Remove screws holding shell half containing no rivets to connector base. Retain screws.
21. Remove shell half.
22. Remove internal movable clamp(s). Where more than one internal clamp exists, one may be left in place while working on the other. Retain shoulder screws.
23. Obtain movable clamps and gaskets from kit and bond gaskets to clamps per table 2 and figure 3. Use MIL-A-5092, type II, adhesive per ND 1002151 for bonding instructions.

NOTE: Careful visual inspection is required to perform step 24 correctly.

VII. G. PROCEDURE (CONTINUED)

24. Place each new movable clamp in position in accordance with figure 3. Press movable clamp into position and note effect on wiring to connector base. If any lateral pressure is evident, additional wire slack must be provided to ensure all slide-on sockets seat fully on wire-wrap posts in the connector base without bending. If additional slack is required, perform VII.A, step 6, before proceeding. Secure movable clamp using shoulder screw retained in step 22.
25. Secure wire bundle(s) in grommet(s) at rear of retained connector half-shell. Test fit removed half shell for proper fit. Use tape as required to obtain proper fit.
26. Perform continuity check of modified connectors per cable P/N drawings. (See table 2).
27. Reassemble removed half-shell using screws retained in step 20.
28. Install modified externally relieved body screws per VII.C, steps 4 through 7.
29. Update applicable records per section VIII.
30. Dispose of removed parts per section IX.

VII. PROCEDURE (CONTINUED)

H. Retrofit Cable Assembly W156, P/N 2900663, as follows:

1. Remove externally relieved body screws, P/N 2900676 -002, and modify per VII.C, steps 1 through 3.
2. Place connector(s) on flat working surface with back shell half containing no rivets facing up.
3. Remove screws holding shell halves together. Remove screws holding shell half containing no rivets to connector base. Retain screws.
4. Remove shell half.
5. Remove internal movable clamp(s). Where more than one internal clamp exists, one may be left in place while working on the other. Retain shoulder screws.
6. Obtain movable clamps and gaskets from kit and bond gaskets to clamps per table 2 and figure 3. Use MIL-A-5092, type II, adhesive per ND 1002151 for bonding instructions.

NOTE: Careful visual inspection is required to perform step 7 correctly.

VII. H. PROCEDURE (CONTINUED)

7. Place each new movable clamp in position in accordance with figure 3. Press movable clamp into position and note effect on wiring to connector base. If any lateral pressure is evident, additional wire slack must be provided to ensure all slide-on sockets seat fully on wire-wrap posts in the connector base without bending. If additional slack is required, perform VII.A, step 6, before proceeding. Secure movable clamp using shoulder screw retained in step 5.

8. Secure wire bundle(s) in grommet(s) at rear of retained connector half-shell. Test fit removed half shell for proper fit. Use tape as required to obtain proper fit.

9. Perform continuity check of modified connectors per cable P/N drawings. (See table 2).

10. Reassemble removed half-shell using screws retained in step 3.

11. Install modified externally relieved body screws per VII.C, steps 4 through 7.

12. Update applicable records per section VIII.

13. Dispose of removed parts per section IX.

VII. PROCEDURE (CONTINUED)

I. Retrofit Cable Assembly W158, P/N 2900664, as follows:

1. Place connector on flat working surface with back shell half containing no rivets facing up.

2. Remove screws holding shell halves together and screws holding shell half containing no rivets to connector base. Retain screws.

3. Remove shell half.

4. Remove internal movable clamp(s). Where more than one internal clamp exists, one may be left in place while working on the other. Retain shoulder screws.

5. Obtain two (2) movable clamps, P/N 2901591-001, and gaskets, P/N 2901590-001, from retrofit kit.

6. Bond gaskets to movable clamps per figure 3, using MIL-A-5092, type II, adhesive, per ND 1002151.

NOTE: Careful visual inspection is required to perform step 7 correctly.

VII. I. PROCEDURE (CONTINUED)

7. Place each new movable clamp in position per figure 3. Press movable clamp into position and note effect on wiring to connector base. If any lateral pressure is evident, additional wire slack must be provided to ensure all slide-on sockets seat fully on wire-wrap posts in the connector base without bending. If additional slack is required perform VII.A, step 6 before proceeding. Secure movable clamp using shoulder screws retained in step 4.

8. Secure wire bundle(s) in grommet(s) at rear of retained connector half-shell. Test fit removed half shell for proper fit. Use tape as required, to obtain proper fit.

9. Perform continuity check of modified connector per cable drawing P/N 2900664 (W158-P1).

10. Reassemble removed half shell using screws retained in step 2.

11. Update applicable records per section VIII.

12. Dispose of removed parts per section IX.

VII. PROCEDURE (CONTINUED)

VIII. MODIFICATION DESIGNATION

A. The significant part number changes resulting from this modification are as listed in section III.

B. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List into the Unit Acceptance Data List.

2. Make necessary entries into the Equipment Inventory Record.

3. Record accomplishment of this modification on the existing Unit History Record Sheet and start a new Unit History Record sheet for the new part number unit. Retain the old Unit History Record sheet in the Acceptance Data Package.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Gyro Caging Electronics, P/N 2900029-021. This modification is being performed to reduce the sensitivity of the Buffer and Interrogator to noise, and prevent improper triggering of the Interrogators at high error signal input levels.

II. AUTHORITY

This retrofit is authorized by Marriage Kit 3.

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Gyro Caging Electronics	2900029-021	2900029-031
Interrogator Electronic Component Assembly	2900076-021	2900076-031
Buffer Electronic Assembly	2901405-011	2901405-021

IV. PRIORITY CHANGES

Not applicable.

V. RELATED CHANGES

RIB 0102119, RIB 0102120 and 8102158 (Marriage Kit 3).

VI. MATERIAL REQUIRED

A. One retrofit kit, P/N 8102268, consisting of the following items is required to modify the Gyro Caging Electronics Assembly:

Qty	Part Number	Description
1	0102131	Retrofit Instruction Bulletin
1	1004260-548	Nameplate
3	8102269	Retrofit kit for Interrogator Electronic Component Assy, P/N 2900076-021
1	8102270	Retrofit kit for Buffer Electronic Assembly, P/N 2901405-011

B. Retrofit kit, P/N 8102269, consisting of the following items is required to modify the Interrogator Electronic Component Assembly, P/N 2900076-021:

Qty	Part Number	Description
1	0102131	Retrofit Instruction Bulletin
2	1N459 (1896966-291)	Diode, semiconductor, MIL-S-19500
1	RC07GF103J (1896985-073)	Resistor, MIL-R-11/8

VI. MATERIAL REQUIRED (CONTINUED)

C. Retrofit kit, P/N 8102270, consisting of the following items is required to modify the Buffer Electronic Assembly, P/N 2901405-011

Qty	Part Number	Description
1	0102131	Retrofit Instruction Bulletin
1	MS17157-6	Feed-thru terminal stud
1	RC07GF303J (1896985-084)	Resistor, MIL-R-11/8

D. Material and special tools required but not supplied in kits are as follows:

Qty	Part Number	Description
AR	N/A	Lacquer thinner (MS35626)
AR	AC General Stores, P/N 29606	Clear lacquer
AR	AC Stationery Stores, P/N 24262	Black India Ink
AR	N/A	Solder, QQ-S-571d, SN60, Form Q, type RA, Core P2
1	*Schwaab Stamp & Seal Co., type AAG-0	Rubber stamp, 1/8 inch, 13 band, alpha numerical

VI. D. MATERIAL REQUIRED (CONTINUED)

Qty	Part Number	Description
1	*Greenfield Steel Stamp Works	Metal stamp set (1/16 inch alpha numerical)
1	Cleveland Twist Drill Co., 59 set	3/32 drill
1	**PSA-30(6430)	Anvil Swaging tool (Cambridge Thermionic)
1	**PSP-54(6654)	Rolling Punch Swaging tool (Cambridge Thermionic)

*or equivalent
**obtain from Host Contractor

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

VII. A. PROCEDURE (CONTINUED)

3. Ink Markings.

   a. Marking to be removed should be removed using lacquer thinner.

   b. New markings shall be covered with a coat of clear lacquer after ink has dried.

   c. New markings shall meet requirements of ND 1002019.

4. When marking is specified, hand marking is acceptable.

B. DETAILED INSTRUCTIONS. Perform modification as follows:

1. Modify Interrogator Electronic Component Assembly, P/N 2900076-021, in accordance with paragraph C.

2. Modify Buffer Electronic Assembly, P/N 2901405-011, in accordance with paragraph D.

3. Obtain nameplate, P/N 1004260-548 from retrofit kit, P/N 8102268.

VII. B. PROCEDURE (CONTINUED)

4. Transfer serial number from original nameplate located on Gyro Caging Electronics, P/N 2900029-021, to nameplate obtained in above step.

5. Remove original nameplate and replace with new nameplate. Dispose of original nameplate per section IX.

6. Dispose of removed parts per section IX.

7. Update applicable records per section VIII.

C. INTERROGATOR ELECTRONIC COMPONENT ASSEMBLY, P/N 2900076-021. Obtain retrofit kit, P/N 8102269, and perform modification as follows:

1. Mark reference designations CR14 and CR15 on side of terminal board opposite the electrical connector adapter. Locate marking per figure 1.

2. Obtain two (2) 1N459 diodes from kit and install (solder) per figure 1.

3. Locate and remove resistor R6 (located between pins 64 and 67).

VII. C. PROCEDURE (CONTINUED)

4. Obtain 10KΩ resistor, P/N RC07GF103J, from kit and install (solder) between pins 64 and 67.

5. Locate identification mark, P/N 2900076-021, on terminal board of assembly. Remove "-021" and replace with "-031".

6. Recalibrate assembly per JDC 19091 or PS 2016105.

D. BUFFER ELECTRONIC ASSEMBLY, P/N 2901405-011. Obtain retrofit kit, P/N 8102270, and perform modification as follows:

1. Unsolder terminal number 10 end of CR3.

2. Obtain a 3/32" drill and carefully drill out and remove terminal stud 10.

3. Mark terminal number "10" and reference designation "R11" next to hole (where stud was removed) on side of terminal board opposite the electrical connector adapter. Locate marking per figure 1.

4. Obtain feed thru terminal stud, P/N MS17157-6, install in terminal 10 hole and swage using PSA-30(6430) anvil swaging tool and PSP-54(6654) rolling punch swaging tool.

VII. D. PROCEDURE (CONTINUED)

5. Obtain resistor, P/N RC07GF303J, from kit and install (solder) between terminals 10 and 20. Install on side where new markings were applied. See figure 1 for reference.

5a. Resolder CR3 lead to terminal number 10.

6. Locate identification mark, P/N 2901405-011, on terminal board assembly. Remove "-011" and replace with "-021".

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package by (1) inserting the Kit Acceptance Data List into the Unit Acceptance Data List, (2) making the necessary entry into the Equipment Inventory Record, and (3) Recording modification in the Unit History Record (referencing Retrofit Instruction Bulletin).

B. If a part number change is made as a result of the modification record performance on the existing Unit History Record sheet and start a new Unit History Record sheet for the changed part number. Retain the old Unit History Record sheet in the Acceptance Data Package.

VIII. MODIFICATION DESIGNATION (CONTINUED)

C. If a part number change is not made as a result of the modification, record performance on the existing Unit History Record sheet.

D. Significant part number changes resulting from this modification are as listed in section III.

IX. DISPOSITION OF PARTS REMOVED

Scrap all parts removed via AC Electronics form 127 or equivalent.

Prepared by ________ Date 8 March 1967
P.C. Engineering Approval ________ Date 8 March 1967
Design Review Board Approval ________ W S Lawrence 70 Apr 67 Date 4-6-67
MIT/IL Approval ________ Date ________
NASA Approval ________ Date 4/10/67
MIT Reliability ________ Date ________

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Interconnect Cable Set, P/N 2900712-031 or -041. This modification is being performed to shorten the Externally Relieved Body Screws to ensure proper moisture sealing of the PSA's.

II. AUTHORITY

This retrofit is authorized by ECP-ACSK-0529, CCA-497-404.

III. UNITS AFFECTED

NOTE: All part numbers listed below are the same for both configurations except for items asterisked, which are the part numbers for the 2900712-041 configuration.

Name	Pre-modification P/N	Post-modification P/N
Cable Set, Interconnect (Special Block II)	2900712-031 *2900712-041	2900712-051 *2900712-061
Cable Assembly, Special Purpose, Electrical-W148	2901212	2901595
Cable Assembly, Special Purpose, Electrical-W149	2901485	2901596
Cable Assembly, Special Purpose Branched, Electrical-W152	2900659	2901597

III. UNITS AFFECTED (CONTINUED)

Name	Pre-modification P/N	Post modification P/N
Cable Assembly, Special Purpose, Electrical, Branched-W154	2901469 *2901566	2901598 *2901605
Cable Assembly, Special Purpose, Electrical, Branched-W156	2900663	2901599
Connector, Plug, Electrical, W148-P2 (PSA-J8/45J8)-(P2)	2900877-011	2900877-021
Connector, Plug, Electrical, W149-P2 (J10-PSA)-(P2)	2900880-011	2900880-021
Connector, Plug, Electrical, W152-P4 (J5-PSA)-(P4)	2900850-011	2900850-021
Connector, Plug, Electrical, W152-P5 (J9-PSA)-(P5)	2900876-011	2900876-021
Connector, Plug, Electrical, W152-P6 (J7-PSA)-(P6)	2900879-011	2900879-021
Connector Plug, Electrical, W154-P2 (J4-PSA)-(P3)	2900854-011	2900854-021
Connector, Plug, Electrical, W156-P3 (J6-PSA)-(P3)	2900840-011	2900840-021

IV. PRIORITY CHANGES

N/A

V. RELATED CHANGES

RIB's 0102682, 0102683, 0102135, 0102136 and 0102137.

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102279, consisting of the following items is required to perform this modification.

Qty	Part Number	Description
1	8102138	Retrofit Instruction Bulletin
5	1016128-011	I.D. Band

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
A/R	MIL-T-713B	Lacing tape, type P, Class 2, black
1	ND 1002019	Marking specification
1	*N/A	Punch, pin, 1/16 inch
A/R	1006271-10	Marking ink, black
A/R	1006271-1	Marking ink, white
A/R	Commercial grade	Clear flat lacquer
A/R	Commercial grade	Lacquer thinner
1	*Schwaab Stamp & Seal Co., AAG-0	13 band, alpha-numeric rubber stamp with 1/8 inch characters
1	N/A	Center punch

*or equivalent

VII. PROCEDURE

A. GENERAL REQUIREMENTS

1. Read and understand complete RIB prior to attempting this modification.

2. Minimum workmanship shall meet requirements defined in Workmanship Standard AC-STD-1, dated 15 January 1965.

3. Ink Markings:

   a. Markings to be removed should be removed using lacquer thinner.

   b. New markings shall be covered with a coat of clear flat lacquer after ink has dried.

   c. New markings shall be performed in accordance with ND 1002019.

4. Where marking is specified, hand marking is acceptable.

B. DETAILED INSTRUCTIONS. Obtain Cable assemblies listed in section III and modify connector plugs listed in section III as follows:

NOTE: If RIB 0102122 has not been installed perform paragraph D. If RIB 0102122 has been installed perform paragraph C.

VII. PROCEDURE (CONTINUED)

C. Externally Relieved Body Screw, P/N 2901508. Perform modification as follows:

NOTE: Do not damage pin during removal and installation.

1. Using a 1/16 inch pin punch (or equivalent), drive out pin, P/N MS171433, from screw by gently tapping with small hammer. Retain pin.

2. Remove screw and three (3) washers, P/N 1897324-002, from connector block. Retain hardware.

3. Remove 0.062 inch of material from tip of screw and chamfer end 45° X 0.03. See figure 1 for reference.

4. Center punch screw head in two (2) places approximately 1/32 inch deep and fill holes with white marking ink, P/N 1006271-1. See figure 1.

5. Obtain one (1) washer retained in step 2 and install on modified screw. Install washer and screw through connector block.

6. Obtain two (2) remaining washers from step 2 and install on screw.

7. Obtain pin retained in step 1 and install. Center pin. See figure 1.

8. Proceed to paragraph E.

VII. PROCEDURE (CONTINUED)

D. Externally Relieved Body Screw, P/N 2900676-002. Perform modification as follows:

1. Remove "E" ring from screw and retain.

2. Remove screw and two (2) washers from connector block. Retain hardware.

3. Remove 0.062 inch of material from tip of screw and chamfer end 45° X 0.03. See figure 2.

4. Center punch screw head in two (2) places approximately 1/32 inch deep and fill holes with white ink, P/N 1006271-1. See figure 2.

5. Install one (1) washer retained in step 2 on modified screw.

6. Install above assembly through connector block and install second washer and "E" ring retained in step 2 on screw.

7. Proceed to paragraph E.

VII. PROCEDURE (CONTINUED)

E. Identification Information.

1. Obtain five (5) new I.D. bands, P/N 1016128-011, from kit.

2. Mark modified Cable Assembly post-modification part numbers on new bands per section III.
   Mark per ND 1002019 with characters 0.12 inch high and centralized. Use 1006271-10 black marking ink.

3. Locate present cable assembly I.D. bands on cables and transfer applicable serial numbers to new I.D. bands. (Use same ink as above.)

4. Remove present I.D. bands and replace with new I.D. band using black lacing tape.

5. Locate modified connector plugs per section III.
   Remove "-011" and replace with "-021" per section III.

6. Update applicable records per section VIII.

7. Scrap all removed parts per AC Electronics form MIL-127 or equivalent.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package by (1) inserting the Kit Acceptance Data List into the Unit Acceptance Data List, (2) making the necessary entry into the Equipment Inventory Record, and (3) recording modification in the Unit History Record (referencing Retrofit Instruction Bulletin).

B. If a part number change is made as a result of the modification record performance on the existing Unit History Record sheet and start a new Unit History Record sheet for the changed part number. Retain the old Unit History Record sheet in the Acceptance Data Package.

C. If a part number change is not made as a result of the modification, record performance on the existing Unit History Record sheet.

D. Complete Apollo Configuration Control (ACC) form No. 1 (Revised) in accordance with ND 1002345.

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Special Purpose Electrical Branched Cable Assembly-W133, P/N 6900143, which is part of the Interconnect Cable Set (Special, LEM), P/N 6900043-041. Additional wires are being added to the heater low lines, LOW LEVEL SHIELDS, and 28 volt distribution to decrease the total IR drop during airborne heater switching.

II. AUTHORITY

This retrofit is authorized by ECP-ACSK-0647.
CCA 497-0530

VI. MATERIALS REQUIRED

A. One retrofit kit, P/N 8102293, consisting of the following items is required to modify the Interconnect Cable Set (Special, LEM) P/N 6900043-041:

Qty	Part Number	Description
1	0102148	Retrofit Instruction Bulletin
3	1016006-004	Splice Reducer
1	6900162	Lead Set, Electrical

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
AR	MIL-T-713B	Lacing tape, type P, class 2, black
1	ND1002019	Marking specification
AR	1006271-10	Marking ink, black
AR	Commercial grade	Clear flat lacquer
AR	Commercial Grade	Lacquer thinner
1	*Schwaab Stamp & Seal Co., AAG-O	13 band, alpha-numeric rubber stamp with 1/8 inch characters

*or equivalent

Sheet 4 of 16
Part No. 0102148
Date: 25 OCT 67
TDRR
Revision A

VI. B. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
AR	QQ-S-571d, Composition SN60, form W, type RA, Core P2	Solder
1	Burndy MR4CQ	Crimping tool
1	G7673A, Master Appliance Co.	Heat gun

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and completely understand RIB prior to attempting this modification.

2. All workmanship shall meet the minimum requirements defined in AC Workmanship Standard, AC-STD-1, dated 15 January 1965.

3. Ink Markings:

   a. Markings to be removed should be removed using lacquer thinner.

   b. New markings shall be covered with a coat of clear flat lacquer after ink has dried.

VII. A. PROCEDURE (CONTINUED)

c. New markings shall meet requirements of ND 1002019.

4. When marking is specified, hand marking is acceptable.

5. Lacing cut to reroute or replace leads shall be replaced using black lacing tape.

6. Delete leads from cable assembly when instructed, by one of the two following methods:

   a. Method one (preferred)

      1) Disconnect lead from its termination point.

      2) Clip attached termination hardware and/or exposed tinned tip(s) from all lead ends and discard.

      3) Pull lead out of harness/cable at most convenient point and discard.

   b. Method two.

      1) Disconnect lead from its termination point.

      2) Clip attached termination hardware and/or exposed tinned tip(s) from all lead ends and discard.

      3) Apply a drop of blue glyptal to severed ends of leads.

VII. PROCEDURE (CONTINUED)

B. DETAILED PROCEDURE. Perform modification to Special Purpose Electrical Branched Cable Assembly-W133, P/N 6900143, as follows.

1. Locate connector P10 on cable W133 and disassemble as necessary to gain access to connector pins. Remove P10 identification band and retain.

2. Obtain one (1) white wire, P/N 6900162-001, (A483) from electrical lead set, P/N 6900162 and install in connector P10 in accordance with Table I.

3. Obtain one (1) wht/red, wht/blu wire, (twisted pair), P/N 6900162-002, from electrical lead set and install in connector P10 in accordance with Table I. (This lead hereafter will be identified as A482.)

4. Obtain One (1) wht/red, wht/blu wire (twisted pair), P/N 6900162-002, from electrical lead set and install in connector P10 in accordance with Table I. (This lead hereafter will be identified as A484.)

5. Route added leads along wire harness to approximately 10 to 12 inches from connector P2. Wires can either be routed along harness and spot tied to harness, or harness lacing can be cut, wires added, and harness retied. Do not cut ends of added wires at this time.

VII. B. PROCEDURE (CONTINUED)

6. Measure back approximately 10 to 12 inches from connector P2. Cut lacing in that immediate area and locate splice reducers E10, E11, and E13.

7. Locate E10 and measure approximately 1-1/8 inch back from it in accordance with figure 1.

8. Cut leads.

9. Strip ends of cut leads .53 inch.

10. Obtain one (1) splice reducer, P/N 1016006-004, from kit and one (1) sleeving insulation, P/N 1010490-642, from electrical lead set. Mark sleeving with "E10", if required, at this time.

11. Slip sleeving over leads prepared in step 9. See figure 1 for reference.

12. Insert leads prepared in step 9 into new splice reducer. See figure 1 for reference.

13. Locate lead A482, measure and cut to proper length, and prepare in accordance with table II.

14. Prepare lead A482R(wht/red) in accordance with table II. Insert prepared lead through sleeving into new splice reducer. See figure 1 for reference.

VII. B. PROCEDURE (CONTINUED)

15. Crimp splice reducer using Burndy MR4CQ crimping tool.

16. Centralize new sleeving over both new splice reducer and original E10 sleeving. New sleeving should cover both points. Heat shrink sleeving in place.

17. Locate E11, measure approximately 1-1/8 inch back from it (see figure 1 for reference) and cut leads.

18. Strip ends of cut leads .53 inch.

19. Obtain one (1) splice reducer, P/N 1016006-004, from kit and one (1) sleeving insulation, P/N 1010490-638, from electrical lead set. Mark sleeving with "E11", if required, at this time.

20. Slip sleeving over leads prepared in step 18. See figure 1 for reference.

21. Insert leads prepared in step 18 into splice reducer. See figure 1 for reference.

22. Prepare lead A482L(wht/blu) in accordance with table II and insert lead through sleeving into splice reducer. See figure 1 for reference.

23. Locate leads A483 and A484, measure and cut leads to proper length. Prepare lead A484 in accordance with table II.

VII. B. PROCEDURE (CONTINUED)

24. Prepare leads A483(wht) and A484L(wht/blu) in accordance with table II. Insert leads through new sleeving into splice reducer. See figure 1 for reference.

25. Crimp splice reducer using Burndy MR4CQ crimping tool.

26. Centralize new "E11" sleeving over both new splice reducer and original E11 sleeving. New sleeving should cover both points. Heat shrink sleeving in place.

27. Locate E13, measure approximately 1-1/8 inch back from kit (see figure 1 for reference) and cut leads.

28. Locate and remove lead A387 from harness by one of two methods recommended in section VI.A, step 6.

29. Strip ends of cut leads .53 inch.

30. Obtain one (1) splice reducer, P/N 1016006-004, from kit and one (1) sleeving insulation, P/N 1010490-642, from electrical lead set. Mark sleeving with "E13", if required, at this time.

31. Slip sleeving over leads prepared in step 29. See figure 1 for reference.

32. Insert leads prepared in step 29 into splice reducer. See figure 1 for reference.

VII. B. PROCEDURE (CONTINUED)

33. Prepare lead A484R(wht/red) in accordance with table II. Insert lead through new sleeving into splice reducer. See figure 1 for reference.

34. Crimp splice reducer using Burndy MR4CQ crimping tool.

35. Centralize new "E13" sleeving over both new splice reducer and original E13 sleeving. New sleeving should cover both points. Heat shrink sleeving into place.

35a. Check continuity per table I.

36. Obtain identification band, P/N 1016128-011, from electrical lead set.

37. Locate and remove cable identification band. Transfer serial number from identification band to new identification band obtained above.

38. Attach new identification band to same position from which old band was removed. Use black lacing tape to attach band.

39. Spot tie modified harness as applicable using black lacing tape.

40. Reassemble connector P10 in reverse order of disassembly. Reattach ID band retained in step 1.

41. Dispose of removed parts in accordance with section IX.

42. Update applicable records in accordance with section VIII.

Table I. Wiring Additions

Lead Ident.	Strip Jacket (inches)	Strip Shield	Strip Lead (inches)	Add Premarked Accessory P/N	Tin	Solder to Connector P10-Pin	Remarks

TDRR
Revision A

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package by (1) inserting the Kit Acceptance Data List into the Unit Acceptance Data List, (2) making the necessary entry into the Equipment Inventory Record, and (3) recording modification in the Unit History Record (referencing Retrofit Instruction Bulletin).

B. If a part number change is made as a result of the modification record performance on the existing Unit History Record sheet and start a new Unit History Record sheet for the changed part number. Retain the old Unit History Record sheet in the Acceptance Data Package.

C. If a part number change is not made as a result of the modification, record performance on the existing Unit History Record sheet.

D. Complete Apollo Configuration Control (ACC) form No. 1 (Revised) in accordance with ND 1002345.

E. Significant part number changes resulting from this modification are as listed in section III.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ________ Date: ________ G & N# ________

The following information must be submitted to Apollo Integrated Logistics Support, Dept. 38-05, AC Electronics, Milwaukee, upon the completion of any retrofit performed on Apollo GFP equipment or repair of Apollo Airborne GFP.

In Part I below, list all Apollo airborne GFP components that are repaired and all A/B and GSE MD symbols or P/N changes affecting subassembly and higher levels of equipment. List highest-to-lowest level of assembly order. All parts/assemblies added to or removed from airborne equipment shall be listed in Part II using the Part I Indent No. of the assembly affected as a cross reference.

PART I: A/B GSE BLACK BOXES/REPARABLE SUB-ASSEMBLIES AFFECTED

Part No. 0102153
Date:
TDRR
Revision A

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Auxiliary Battery Pack, P/N 1901492-031. This modification is being performed to provide back-up power to the Portable Temperature Controller (PTC II).

II. AUTHORIZATION

This retrofit is authorized by ACP-ACSK-0570 (CCA-497-0566).

III. UNITS AFFECTED

Name	Pre-Modification P/N	Post-Modification P/N
Auxiliary Battery Pack	1901492-031	1901492-041

VI. MATERIALS REQUIRED

A. One retrofit kit, P/N 8102299, consisting of the following items is required to perform this modification:

Qty	Part Number	Description
1	0102153	Retrofit Instruction Bulletin
3	F02A250V2A (1897099-011)	Fuse-cartridge, style F02, MIL-F-15160/02
1	MS26572-1	Fuseholder
1	1004260-580	Nameplate
1	2901623	Lead set
1	2901625	Cable assy - Spl Purpose, Electrical, Branched, W185
1	2901624	Decal
12	1006783-19	Screw, Button head
12	1016151-004	Nut, self-locking
4	AN535-0-3 (1897109-103)	Screw, drive
4	AN363C1032 (1896990-011)	Nut, self-locking
4	1006783-44	Screw, button head
7	MS3193-16A (1896877-016)	Contact
7	1015864-135	Insulation - sleeving

Sheet 4 of 23
Part No. 0102153
Date:
TDRR
Revision A

VI. A. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
4	1016105-010	Strap assy - harness
1	1016073-183	Connector - dummy
2	1016073-143	Connector, dummy
5	1015902-49	Terminal - lug
1	1010490-258	Insulation - sleeving, heat shrink
1	1016006-001	Splice - reducer
2	1015873-001	Fuseholder

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
1	*Black & Decker P/N 30	1/4 inch drill, hand portable, electric
1	*Black & Decker P/N 361	1/2 inch drill, hand portable, electric
1	*Cleveland Twist Drill Co. 52 set	No. 6 and 31 drill
1	*Schwaab Stamp & Seal Co., type AAG-0	13 band, alpha-numeric rubber stamp with 1/8 inch characters
1	*Greenfield Steel Stamp Works	Metal stamp set, 1/8 inch alpha-numerical

VI. B. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
A/R	1006271-10	Marking ink, black
A/R	QQ-S-571d, composition SN60, form W, type RA, core P2	Solder
A/R	MIL-T-713B, type P, waxed, class 2	Black lacing & tying tape
1	ND1002019	Marking specification
A/R	Commercial grade	Clear flat lacquer
A/R	Commercial grade	Lacquer thinner
1	G7673A Master appliance Co.	Heat gun
A/R	MIL-V-6894/A	Oil varnish
1	Bendix 11-8107-16	Insertion tool
1	Bendix 11-7880-16	Extraction tool
1	Bendix MS3191-A	Crimping tool
1	Bendix MS3191-16A	Positioner tool
1	Burndy MR8-33T-1	Crimp tool
1	Burndy Y10-MRF-4	Crimp tool

* or equivalent.

VII. PROCEDURE

A. GENERAL REQUIREMENTS

1. Read and completely understand RIB prior to attempting this modification.
2. All workmanship shall meet the minimum requirement defined in AC Workmanship Standard, AC-STD-1, dated 15 January 1965.
3. Ink Markings:
   a. Markings to be removed should be removed using lacquer thinner.
   b. New markings shall be covered with a coat of clear flat lacquer after ink has dried.
   c. New markings shall meet requirement of ND1002019.
4. When marking is specified, hand marking is acceptable.
5. During modification, lacing may be cut as required to accomplish necessary work. Spot ties shall be added as necessary after all conductor rework has been completed.
6. Decal Installation Procedure:

VII. PROCEDURE (CONTINUED)

a. Dip decal in luke-warm water for approximately 15 seconds (in cold water for approximately 20 seconds). Decal should slide easily on backing. If it does not, soak for a few more seconds.

b. Slide decal to edge of backing, but do not completely remove from backing.

c. Position and install decal in proper location using backing as an installation aid.

d. Completely remove backing from decal and carefully flatten decal using an edge of a piece of cardboard or similar straight edged object.

e. Carefully wash face of decal with clear water to remove gum. Allow decal to air dry for four hours.

f. Apply a bead of varnish (MIL-V-6894A unreduced) to decal, overlapping all edges 1/4 inch minimum.

B. DETAILED PROCEDURE.

Perform modification to Auxiliary Battery Pack, P/N 1901492-031, (ABP), as follows:

1. Locate sixteen (16) holes in ABP Cover as indicated in figure 1.

VII. B. PROCEDURE (CONTINUED)

2. Drill holes located in above step using a number 6 drill. Deburr any sharp edges on drilled holes. Remove all chips resulting from drilling holes.
3. Mark new dummy connector identifications as indicated in figure 1. Characters shall be marked in accordance with ND 1002019, 0.12 inch high, using black marking ink, P/N 1006271-10.
4. Obtain dummy connector, P/N 1016073-183, (P1), four (4) button head screws, P/N 1006783-19, and four (4) self-locking nuts, P/N 1016151-004, from kit. Install connector on ABP cover as indicated in figure 1. Install screws so self-locking nuts are on connector side of ABP cover.
5. Obtain two (2) dummy connectors, P/N 1016073-143, (P2 and P3), eight (8) button head screws, P/N 1006783-19, eight (8) self-locking nuts, P/N 1016151-004, from kit. Install connectors on ABP cover as indicated in figure 1. Install screws so self-locking nuts are on connector side of ABP cover.
6. Obtain four (4) harness strap assemblies, P/N 1016105-010, four (4) button head screws, P/N 1006783-44, and four (4) self-locking nuts, P/N AN363C1032 (1896990-011), from kit.

VII. B. PROCEDURE (CONTINUED)

7. Install harness strap assemblies on ABP cover as indicated in figure 1. Install screws so self-locking nuts are on harness strap assembly side of ABP cover.

8. Locate ABP cover P/N "1901535". Remove and remark with P/N "2901637-011", in accordance with section VII.A.3. See figure 1 for part number location.

9. Locate three (3) new fuse holes on ABP front panel, P/N 1902136, as indicated in figure 2.

10. Drill holes located in step 9, .630 inch. Deburr any sharp edges on drilled holes. Remove all metal chips resulting from drilling holes.

11. Obtain decal, P/N 2901624, from kit and install on ABP front panel in accordance with figure 2 and section VII.A.6.

12. Obtain fuseholder, P/N MS26572-1, from kit and install on ABP front panel in position designated as "2A". See figure 2 for reference.

13. Obtain two (2) fuseholders, P/N 1015873-001, from kit and install on ABP front panel in positions designated as "PTC II and 2 AMP".

VII. B. PROCEDURE (CONTINUED)

14. Locate Part Number "1902136" on ABP panel. Remove and remark with "2901638" in accordance with section VII.A.3. See figure 3 for part number location.

15. Mark fuse designations on back of front panel as indicated in figure 3. Mark in accordance with ND 1002019, using black marking ink, P/N 1006271-10.

16. Locate lead A36 at J1-A. Remove lead from J1 using Bendix 11-7880-16 extraction tool.

17. Cut approximately three inches from end of lead A36 and discard.

18. Strip end of lead A36 .25 inch.

19. Obtain splice reducer, P/N 1016006-001, and heat shrink sleeving insulation, P/N 1010490-258, from kit. Mark sleeving with "E2", if required, at this time.

20. Install sleeving on lead A36, insert lead A36 into "BB" end of reducer (smaller end) and crimp "BB" end of reducer using Burndy Y10-MRF4 crimp tool.

21. Obtain leads A74 and A75 from lead set, P/N 2901623, and strip one end of each lead .25 inch.

22. Insert stripped end of leads A74 and A75 into "B" end of splice reducer (larger end) and crimp using Burndy Y10-MRF4 crimp tool.

VII. B. PROCEDURE (CONTINUED)

23. Slide sleeving insulation over splice reducer and heat shrink.

24. Route opposite ends of leads A74 and A75 to J1 connector and cut to proper length.

25. Strip ends of leads A74 and A75 .25 inch.

26. Obtain two (2) contacts, P/N MS3193-16A, from kit, install on stripped ends of leads A74 and A75, and crimp using Bendix MS3191-A crimp tool and Bendix MS3191-16A positioner.

27. Insert lead A74 in J1-H and lead A75 in J1-A using Bendix 11-8107-16 insertion tool.

28. Obtain leads A65 through A73 and lead A76 from lead set, P/N 2901623, and install in accordance with Table I.

29. Obtain three (3) fuses, P/N F02A250V2A from kit and install in three (3) new fuseholders.

30. Add spot ties and lacing as necessary after leads have been installed.

31. Perform continuity and voltage check in accordance with Table II.

32. Perform functional check in accordance with Table III.

VII. B. PROCEDURE (CONTINUED)

33. Locate identification band marked "1902208" on wiring harness.

34. Obtain identification band, P/N 1016128-011, from lead set and mark with P/N "2901643", if not marked.

35. Remove existing identification band and replace with identification band obtained in step 34.

36. Obtain new nameplate, P/N 1004260-580, from kit. Transfer serial number and contract number from existing nameplate located on side of ABP case to new nameplate. Use metal stamp set with 1/8 inch high characters for imprinting data. If required, add new Auxiliary Battery Pack Part number "1910492-041" to nameplate.

37. Remove existing nameplate from side of ABP case. Remove screws carefully so drive screw holes are not damaged.

38. Obtain four (4) drive screws, P/N AN535-0-3, from kit and use to install new nameplate, prepared in step 31, in position where old nameplate was installed.

39. Update applicable records as directed in section VII.

40. Dispose of removed parts in accordance with section IX.

J1-F	J1-G	25-35 VDC	S1 ON

VII. B. PROCEDURE (CONTINUED)

TABLE III. ABP FUNCTIONAL CHECK

1. Set battery switch to OFF.
2. Connect P1 of W185 to J1 of ABP.
3. Connect P1 of ABP to 115.0 ± 11.5 V, 60 ± 3 hz source
4. Check for no voltage (0 ± 1 VDC OR AC) at W185 P2-M (hi) and P2-J (lo), or P3-K (Pos) and P3-L (Neg).
5. Set battery switch to ON.
6. Check for 115 volts at W185 P2-M (hi) and P2-J (lo).
7. Check for no voltage (0 ± 1 VDC) at W185 P3-K (Pos) and P3-L (Neg).
8. Remove P1 from 115 volt source.
9. Check for no voltage (0 ± 1 VAC) at W185 P2-M (hi) and P2-J (lo).
10. Check for 28 +7, -3 VDC at W185 P3-K (Pos) and P3-L (Neg).
11. Reconnect P1 to 115 volt source. The same voltages shall exist as in steps 9 and 10.
12. Set battery switch to OFF position and then to ON position. The same voltages shall exist as in steps 6 and 7.

VII. B. PROCEDURE (CONTINUED)

TABLE III. ABP FUNCTIONAL CHECK (CONTINUED)

13. Set battery switch to OFF, disconnect P1 of ABP, and disconnect P1 of W185 from J1 of ABP and install W185 in ABP cover.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package by making the necessary entry into the Equipment Inventory Record in accordance with RE 1.10, (Apollo Guidance and Navigation Equipment Inventory Record Procedure), and recording modification in the Unit History Record (referencing Retrofit Instruction Bulletin) in accordance with RE 1.9 (Unit History Record Procedure).

B. If a part number change is made as a result of the modification, record performance on the existing Unit History Record sheet, and start a new Unit History Record sheet for the changed part number. Retain the old Unit History Record sheet in the Acceptance Data Package.

C. If a part number change is not made as a result of the modification, record performance on the existing Unit History Record sheet.

D. Complete Apollo Configuration Control (ACC) form No. 1 (Revised) in accordance with ND 1002345.

VIII. MODIFICATION DESIGNATION (CONTINUED)

E. Significant part number changes resulting from this modification are as listed below:

Name	Pre-Modification P/N	Post-Modification P/N

Prepared by CARL G. GUILE Date 12 DEC 1968

P.C. Engineering Approval Date 13 Dec 1968

Design Review Board Approval H. Miller Date 17/DEC/68

MIT/IL Approval Date 27 Jan 69

NASA Approval Date 1/29/69

MIT Reliability Date

I. PURPOSE

The purpose of this RIB is to provide instructions for the modification of the Auxiliary Battery Pack, P/N 1901492-041, (ABP), and modification of the Battery Power Pack, P/N 1900011-051, (BPP). This modification is being performed to both the ABP and the BPP to correct blowing of 2 amp fuses in 115 volt, 60 hz circuit due to current waveform distortion caused by transformer operated fullwave rectifier load in PTC II.

II. AUTHORITY

These retrofits are authorized by ECP-ACSK-0748. CCA 497-0606.

III. UNITS AFFECTED

Name	Pre-Modification P/N	Post-Modification P/N
Auxiliary Battery Pack Serial No's. 1 & 2	1901492-041	1901492-051
Battery Power Pack Serial No's. 1 thru 14	1900011-051	1900011-061
Inertial Components Temperature Controller (ICTC)	1900342-041	1900342-051

IV. PRIORITY CHANGES

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102303, consisting of the following items is required to modify the Auxiliary Battery Pack, P/N 1901492-041.

Qty	Part Number	Description
1	0102158	RIB
1	1004260-587	Nameplate
3	F02A250V5A	(1897099-014) fuse MIL-F-15160/02
1	2901663	Stencil, identification

B. One Retrofit Kit, P/N 8102302, consisting of the following items is required to modify the Battery Power Pack, P/N 1900011-051.

Qty	Part Number	Description
1	0102158	RIB
1	1004260-586	Nameplate
3	F02A250V5A	(1897099-014) fuse MIL-F-15160/02
1	2901663	Stencil, identification

VI. MATERIALS REQUIRED (CONTINUED)

C. Materials and special tools required but not supplied in kits are as follows;

Qty	Part Number	Description
1	ND 1002019	Marking specification
A/R	1006271-10	Marking Ink, Black
A/R	MIL-P-8585A, color yellow	Primer coating, Zinc Chromate, low-moisture - sensitivity
A/R	TT-E-529a, Class A (Air-drying, color 26440, grey)	Enamel, Alkyd, semi-gloss
1	MIL-F-14072	Painting specification
1	*Schwaab Stamp & Seal Co., AAG-0	13 band, alpha - numeric rubber stamp with 1/8 inch characters
1	*Greenfield Steel Stamp Works	Metal Stamp Set, 1/8 inch Alpha - numerical
A/R	*Y9108, 1 inch wide	Masking tape
A/R	FED-TT-I-735a	ISOPROPYL Alcohol
A/R	0-B-41	Distilled water
A/R	BB-F-671a, type F-113	Cleaning agent, freon TF

* or equivalent.

VII. PROCEDURE

A. GENERAL REQUIREMENTS

1. Read and completely understand RIB prior to attempting this modification.

2. All workmanship shall meet the minimum requirements defined in AC Workmanship Standard, AC-STD-1, dated 15 January 1965.

3. Ink Markings - Removing and remarking part numbers shall be accomplished as follows:

   a. Mask part number or area of part number to be changed using one (1) inch masking tape.

   b. Using a fine grade of sandpaper, carefully remove part number or area of part number to be changed. Take as much care as possible to prevent removing grey paint during part number removal.

   c. Clean area to be painted and remarked using isopropyl alcohol, distilled water, isopropyl alcohol, and freon, in that order. Allow cleaned area to air dry.

   NOTE: If no grey paint has been removed in step b, proceed to step e. If paint has been removed, perform all the following steps.

VII. A. 3. PROCEDURE (CONTINUED)

   d. Apply yellow primer, MIL-P-8585A to area which is to be repainted and allow to air dry in accordance with P513 of MIL-F-14072. (painting specification)

   e. Apply grey semi-gloss enamel, TT-E-529a, class A, color 26440, and allow to air dry. Apply paint in accordance with P513 of MIL-F-14072.

4. When marking is specified, hand marking is acceptable.

B. DETAIL PROCEDURE FOR ABP

Perform modification to the ABP, P/N 1901492-041, as follows:

1. Remove and discard in accordance with paragraph IX, the three 2 amp fuses, P/N F02A250V2A, from the front panel locations marked 2 AMP PTC II, and 2A SPARE.

2. Remove and restencil with stencil from kit the following front panel markings in accordance with paragraph VII. A. 3.:

FROM	TO
5 AMP	5 ASB
5 A	5 ASB
2 AMP	5 AMP
2 A	5 A

VII. B. PROCEDURE (CONTINUED)

CAUTION: If fuse holders are removed to facilitate modification be certain proper identification is maintained to assure correct reassembly.

3. Obtain three (3) 5 amp fuses, P/N F02A250V5A, from kit, P/N 8102303, and install in the locations marked PTC II or newly marked as 5 AMP and 5A.

4. Replace nameplate located on side of case assembly (reuse the four mounting drive screws) with new nameplate from retrofit kit.

5. Remove and renumber the front panel assembly, P/N 1902248-021; change to -031, in accordance with paragraph VII. A. 3.

6. Remove and renumber the front panel, P/N 2901638; change to P/N 2901661, in accordance with paragraph VII. A. 3.

C. DETAIL PROCEDURE FOR BPP

Perform modification to the BPP, P/N 1900011-051, as follows:

1. Remove one (1) 2 amp fuse, P/N F02A250V2A, and one (1) 5 amp fuse, P/N F02B32V5AS, from the front panel locations under SPARE FUSES 2 amp and 5 amp. Retain the 5 amp fuse. From locations marked 2 AMP and PTC remove two (2) 2 amp fuses. Discard the three (3) 2 AMP fuses in accordance with paragraph IX.

VII. C. PROCEDURE (CONTINUED)

2. Remove and restencil with stencil from kit the following front panel markings in accordance with paragraph VII. A. 3.

Under SPARE FUSES

FROM	TO
2 AMP	5 ASB

Under FUSES

FROM	TO
5 AMP	5 ASB
2 AMP	5 AMP

CAUTION: If fuse holders are removed to facilitate modification be certain proper identification is maintained to assure correct reassembly.

3. Remove and renumber front panel assembly, P/N 1902630-011, change to -021, in accordance with paragraph VII. A. 3.

4. Remove and renumber front panel, P/N 1902629, change to P/N 2901662, in accordance with paragraph VII. A. 3.

5. Replace nameplate located on side of case assembly (reuse the four mounting screws) with new nameplate from retrofit kit.

VII. B. PROCEDURE (CONTINUED)

6. Install 5 amp fuse, P/N F02B32V5AS, retained from step VII. C. 1, into fuse holder location on front panel marked 5 ASB under SPARE FUSES.

7. Obtain three (3) 5 amp fuses, P/N F02A250V5A, from kit, P/N 8102302, and install in front panel locations 5 AMP, PTC, and SPARE FUSE holder marked 5 AMP.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package by (1) inserting the Kit Acceptance Data List into the Unit Acceptance Data List, (2) making the necessary entry into the Equipment Inventory Record, and (3) recording modification in the Unit History Record (referencing Retrofit Instruction Bulletin).

B. If a part number change is made as a result of the modification record performance on the existing Unit History Record sheet and start a new Unit History Record sheet for the changed part number. Retain the old Unit History Record sheet in the Acceptance Data Package.

VIII. MODIFICATION DESIGNATION (CONTINUED)

C. If a part number change is not made as a result of the modification, record performance on the existing Unit History Record sheet.

D. Complete Apollo Configuration Control (ACC) form No. 1 (revised) in accordance with ND 1002345.

IX. DISPOSITION OF PARTS REMOVED

Scrap ✓ removed parts in accordance with AC Electronics form MIL-127 or equivalent. Good fuses can be returned to stock.

TDRR
Revision A

I. PURPOSE

The purpose of this RIB is to provide instructions for the modification of the PSAAM, P/N 2901143-021. This modification is being performed to prevent the PSAAM from resting against the PSA closeout panel of the spacecraft by the addition of two spacer blocks to case bottom cover of the PSAAM.

II. AUTHORITY

This retrofit is authorized by ECP-ACSK-794; CCA 638 EA 8604-5379.

III. UNITS AFFECTED

Name	Pre-Modification P/N	Post-Modification P/N

VI. B. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
AR	FED-TT-I-735a	Isopropyl alcohol
AR	O-B-14	Distilled water
AR	BB-F-671a, type F-113	Freon TF, cleaning agent

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and completely understand RIB prior to attempting this modification. Assure availability of latest issue of RIB by referring to SIDL.
2. All workmanship shall meet the minimum requirements defined in AC Workmanship Standard, AC-STD-1, dated 15 January 1965.
3. Ink Marking - Removing and remarking part numbers shall be accomplished as follows:

   Clean area to be remarked using isopropyl alcohol, distilled water, isopropyl alcohol, and freon, in that order. Allow cleaned area to air dry.

4. When marking is specified, hand marking is acceptable.

VII. PROCEDURE (CONTINUED)

B. DETAIL PROCEDURE.
Perform modification to the PSAAM, P/N 2901143-021, as follows:

1. Disassemble the case bottom cover from the PSAAM by removal of 34 button head screws and lock washers. Retain this attaching hardware.
2. Locate, punch centers, and drill (use no. 2 size drill) four (4) thru holes in accordance with Figure 1.
3. Deburr and clean surfaces of new holes and apply alodine to exposed unfinished aluminum surfaces at the four new holes.
4. Obtain from kit the two (2) spacer blocks, and four (4) pan head screws and split lock washers.
5. Install spacer blocks onto the outside surface of the case bottom cover assembly with two (2) pan head screws and split lock washers each; insert screws thru the new drilled holes from inner side of cover assembly. Orient spacer blocks with major height dimension toward bottom of case bottom cover.

VII. B. PROCEDURE (CONTINUED)

6. Remove and renumber the part number of the case bottom cover subassembly, P/N 2901243; change to 2901680, in accordance with paragraph VII.A.3.
7. Obtain nameplate, P/N 1004260-590, from kit. Locate existing nameplate on PSAAM and transfer serial number and contract number from existing nameplate to new nameplate.
8. Replace nameplate located on side of case assembly (reuse the four mounting screws) with new nameplate from retrofit kit.
9. Reassemble the modified case bottom cover, to the PSAAM using the attaching hardware retained in step B.1.

VIII. MODIFICATION DESIGNATION

A. Update the Acceptance Data Package by (1) inserting the Kit Acceptance Data List into the Unit Acceptance Data List, (2) making the necessary entry into the Equipment Inventory Record, and (3) recording modification in the Unit History Record (referencing Retrofit Instruction Bulletin).

B. If a part number change is made as a result of the modification, record performance on the existing Unit History Record sheet and start a new Unit History Record sheet for the changed part number. Retain the old Unit History Record sheet in the Acceptance Data Package.

C. If a part number change is not made as a result of the modification, record performance on the existing Unit History Record sheet.

D. Complete Apollo Configuration Control (ACC) form No. 1 (Revised) in accordance with ND 1002345.

CAUTION: When drilling the 4 thru holes, back area with a wooden block to prevent tearing of shielding.

None.

VI. MATERIAL REQUIRED

A. One (1) Retrofit Kit, P/N 8102601, for G & N Systems 5, 6, 7 and 8, consisting of the following.

Item	Qty	Nomenclature	P/N
1.	1	Retrofit Instruction Bulletin (RIB)	0102600
2.	1	Tray 10 Frame Assembly	1007258-011
3.	1	Signal Conditioner Power Supply	1007125
4.	18	Socket Head Cap Screw	NAS 1352-06-8
5.	18	Flat Washer	MS15795-805

B. One (1) Retrofit Kit, P/N8102600, for G & N Systems 20, 17 and 12, consisting of the following.

Item	Qty	Nomenclature	P/N
1.	1	Retrofit Instruction Bulletin (RIB)	0102600
2.	1	Tray 10 Frame Assembly	1007258-021
3.	1	Signal Conditioner Power Supply	1007525-011
4.	18	Socket Head Cap Screw	NAS 1352-06-8
5.	18	Flat Washer	MS15795-805

C. Special tools or equipment required but not supplied in kit.

Item	Qty	Nomenclature	P/N
1.	1	Hex Head Cap Screw Driver, (Snap On TMA-3-1/2, 1/4 Inch Square Drive, 7/64 Inch Size)	N/A
2.	1	Hex Head Cap Screw Driver, (Snap On TMA-5, 1/4 Inch Square Drive, 5/32 Inch Size)	N/A

VI. MATERIAL REQUIRED (CONTINUED)

Item	Qty	Nomenclature	P/N
3.	1	Socket Wrench Adapter (Snap-On TA-3 Adapter 3/8 Inch Square Drive, Female X 1/4 Inch Square Drive Male)	N/A
4.	1	Torque Wrench (P.A. Sturtevant F50-1, 0 to 50 Inch-Pounds, 3/8 Inch Square Drive)	N/A
5.	AR	Thermal Grease	1006879

VII. PROCEDURE

A. General

1. Read and thoroughly understand the RIB before attempting retrofit.

2. Assure that latest revision RIB is used to effect the modification. (Verify by checking with SIDL.)

B. Procedural

1. Remove tray 10 (P/N 1007160 for G & N Systems 5, 6, 7, and 8; P/N 1021230-011 for G & N System 20; and P/N 1007460-011 for G & N Systems 17 and 12) by:

   a. Unscrew one (1) socket head screw P/N 1008098, from jack screw retainer, P/N 1001317, located on front of tray face.

VII. PROCEDURE (CONTINUED)

b. Remove tray 10 from PSA.

2. Remove the following modules from their respective frame assemblies in this order:

Item	Qty/ Assy	Module and P/N	Frame Assy P/N	System S/N
1.	1	(800 cps Compensation)		
		P/N 1007095	1007150	5,6, 7 & 8
		P/N 1007591-011	1021220-011 1007450-011	20,17 & 12
2.	3	(G&N Subsystem Supply Filter)		
		P/N 1007090	1007150	5,6, 7 & 8
		P/N 1007590-011	1021220-011 1007450-011	20,17 & 12
3.	1	(Amplifier 5 percent 800 cps)		
		P/N 1007048	1007150	5,6, 7 & 8
		P/N 1007438-011	1021220-011 1007450-011	20,17 & 12

3. Remove 800 cps compensation module (Item 1) by unscrewing two (2) captivated hex jack screws, P/N 1008172. Turn one screw at a time (alternating) one after another in increments of one and one-half turns. Continue process until module is detached from frame. Retain module.

VII. PROCEDURE (CONTINUED)

4. Remove three (3) G & N subsystem supply filter modules (Item 2) by unscrewing three (3) captivated hex jack screws, P/N 1008172. Turn one screw at a time (alternating) one after another in increments of one and one-half turns. Continue process until modules are detached from frame. Retain modules.

5. Remove 5 percent, 800 cps amplifier module (Item 3) by unscrewing four (4) captivated hex jack screws, P/N 1008172. Turn one screw at a time (alternating) one after another in increments of one and one-half turns. Continue process until module is detached from frame. Retain module.

6. Scrap old tray 10 frameassemblies.

7. Items 1, 2 and 3 above shall be mounted on new frame assemblies in reverse order followed, lastly, by signal conditioner power supply module as designated below in the following sequence:

Item	Qty/ Assy	Module and P/N	New Frame P/N	System S/N
1.	1	(Amplifier, 5 percent 800 cps)		
		P/N 1007048	1007258-011	5,6, 7 & 8
		P/N 1007438-011	1007258-021	20,17 & 12

VII. PROCEDURE (CONTINUED)

Item	Qty/ Assy	Module and P/N	New Frame P/N	System S/N
2.	3	(G&N Subsystem Supply Filter)		
		P/N 1007090	1007258-011	5,6, 7 & 8
		P/N 1007590-011	1007258-021	20,17 & 12
3.	1	(800 cps Compensation)		
		P/N 1007095	1007258-011	5,6, 7 & 8
		P/N 1007591-011	1007258-021	20,17 & 12
4.	1	(Signal Conditioner Power Supply)		
		P/N 1007125	1007258-011	5,6, 7 & 8
		P/N 1007525-011	1007258-021	20,17 & 12

8. Mount retained modules as listed in the above sequence on their respective new frame assemblies as described below:

   a. Apply thermal grease, P/N 1006879, to heat-sink portion of mounting face of all modules.

   b. Plug modules in place and fasten to frame assembly with socket head cap screw, P/N NAS 1352-06-8, and flat washer, P/N MS15795-805.

VII. PROCEDURE (CONTINUED)

   c. Tighten screws, one at a time, until module is secure.

   d. Torque screws to, 25 to 30 inch-pounds.

9. Replace tray 10 in PSA.

10. Fasten socket head screw, P/N 1009098, located in jack screw retained, P/N 1001317, on face of tray 10 until fully secure. Torque screw to 25-30 inch-pounds.

VIII. MODIFICATION DESIGNATION

A. The following list comprises all resulting part number changes:

Series	Nomenclature	From	To
00	Tray 10, Frame Assy	1007150	1007258-011
00	Tray 10, Frame Assy	1021220-011	1007258-021
50	Tray 10, Frame Assy	1007450-011	1007258-021
00	Signal Conditioner Power Supply	None	1007125
50	Signal Conditioner Power Supply	None	1007525-011

B. The following part number changes resulted due to this RIB and therefore should be noted:

Series	Nomenclature	From	To
00	Power Diodes & Signal Conditioning Electronics Assembly	1007160	1007256-011

VIII. MODIFICATION DESIGNATION (CONTINUED)

Series	Nomenclature	From	To
00	Power Diodes & Signal Conditioning Electronics Assembly	1021230-011	1007256-021
50	Power Diodes & Signal Conditioning Electronics Assembly	1007460-011	1007256-021
00	Power & Servo Assy	1007100	1007257-011
00	Power & Servo Assy	1007170	1007257-021
00	Power & Servo Assy	1021207-011	1007257-031
50	Power & Servo Assy	1007400-011	1007257-041

IX. DISPOSITION OF PARTS REMOVED

Scrap any tray 10 (old) frames assemblies removed.

TDRR
Revision A

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instruction for the modification of the Nav Base Optical Unit and Bellows Installation Kit and Navigation Base Assembly LEM (kit). This modification is required to prevent galling of alignment surfaces on the IMU mounting pads during assembly and disassembly of the IMU to the Navigation Base. (Both LEM and BLK II)

II. AUTHORITY

This Retrofit is authorized by ECP-ACSK-0359. (CCA-497-0313)

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Nav. Base, Optical Unit and Bellows Installation Kit (G&N Systems 201,202,203,204,205, and 206)	2899950-011	2899950-031
Navigation Base Assembly LEM (G&N Systems 601 and 602)	6899950-011	6899950-021
Navigation Base Assembly LEM (G&N Systems 603,604,605, and 606)	6899980-011	6899980-021

Sheet 3 of 17
Part No. 0102643
Date: 9 SEPT 66
TDRR
Revision A

IV. PRIORITY CHANGES

Not applicable.

V. RELATED CHANGES

Not applicable.

VI. MATERIAL REQUIRED

A. Retrofit kit, P/N 8102668, contains the following items:

Qty	Part Number	Description
1	0102643	Retrofit Instruction Bulletin (RIB)
2	2021204	Bushing
4	NAS674V19	Bolt, Hex Cap

B. Retrofit kit, P/N 8102685, contains the following items:

Qty	Part Number	Description
1	0102643	Retrofit Instruction Bulletin (RIB)
2	2021204	Bushing, sleeving, IMU mount
4	NAS674V19	Bolt, Hex Cap
1	1004260-101	Identification plate

Sheet 4 of 17
Part No. 0102643
Date: 9 SEPT 66
TDRR
Revision A

VI. MATERIAL REQUIRED (CONTINUED)

C. Retrofit kit, P/N 8102684, contains the following items:

Qty	Part Number	Description
1	0102643	Retrofit Instruction Bulletin (RIB)
2	2021204	Bushing, sleeving, IMU mount
4	NAS674V19	Bolt, Hex Cap
1	1004260-508	Identification plate

D. Materials and special tools required but not supplied in the retrofit kit are as follows:

Qty	Part Number	Description
AR	N/A	Methyl-ethyl-ketone (MEK) TT-M-261
AR	1011541	Adhesive, epoxy (3M, type EC2216)
1	ND1002219	Instructions to apply 1011541 adhesive. Apply in accordance with Method II.

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand RIB prior to performing modifications.
2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

B. DETAILED PROCEDURES. Perform the following modifications as applicable.

1. Modify Nav. Base Optical Unit and Bellows Installation Kit, P/N 2899950-011, (G & N Systems 201 through 206) in accordance with paragraph C.
2. Modify Navigation Base Assembly LEM, P/N 6899950-011, (G & N Systems 601 and 602) in accordance with paragraph D.
3. Modify Navigation Base Assembly LEM, P/N 6899980-011, (G & N Systems 603 through 606) in accordance with paragraph E.

VII. PROCEDURE (CONTINUED)

C. MODIFICATION OF NAV. BASE, OPTICAL UNIT AND BELLOWS INSTALLATION KIT, P/N 2899950-011, (G & N Systems 201 through 206). Perform modification as follows:

NOTE: Do not incorporate modification if IMU is mounted in spacecraft, assign retrofit kit to system and install kit during installation of a replacement IMU or when an IMU has been removed and is being reinstalled.

1. Obtain retrofit kit, P/N 8102668.
2. Obtain Nav. Base, Optical Unit and Bellows Installation Kit, P/N 2899950-011, and remove the following items:

Qty	Part Number	Description
2	NAS674V18	Bolt, hex cap
2	2899992	Bolt, IMU mount

3. Obtain items from retrofit kit, P/N 8102668, and add to installation kit, P/N 2899950-011.
4. Dispose of all removed parts in accordance with section IX.
5. Update applicable records and forms in accordance with section VIII.

VII. PROCEDURE (CONTINUED)

D. MODIFICATION OF NAVIGATION BASE ASSEMBLY LEM, P/N 6899950-011, (G & N Systems 601 and 602). Perform modification as follows:

NOTE: Do not incorporate modification if IMU is mounted in spacecraft. If IMU is mounted in spacecraft, assign retrofit kit to system and install kit during installation of a replacement IMU or when a IMU has been removed and is being reinstalled.

1. Obtain retrofit kit, P/N 8102685.
2. Obtain Navigation Base Assembly LEM, P/N 6899950-011, and remove the following items:

Qty	Part Number	Description
2	NAS674V18	Bolt, hex cap
2	2899992	Bolt, IMU mount

3. Obtain the following items from retrofit kit, P/N 8102685, and add to Navigation Base Assembly LEM, P/N 6899950-011, (kit):

Qty	Part Number	Description
4	NAS674V19	Bolt, hex cap
2	2021204	Bushing, sleeving-IMU mount

VII. D. PROCEDURE (CONTINUED)

4. Obtain identification plate, P/N 1004260-101, from retrofit kit and transfer serial number and contract number from existing nameplate on Navigation Base Assembly LEM, P/N 6899951-011 (final machined) to new nameplate. Use typewriter (with ribbon removed) to imprint information on new identification plate. (Height of typewriter characters should be 0.057 to 0.067 inches.)

   WARNING: Methyl-ethyl-ketone (MEK) is toxic and inflammable. When using this solvent provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

5. Clean old identification plate with MEK.
6. Mount new identification plate over old plate using 1011541 epoxy adhesive applied in accordance with ND 1002219, method II.
7. Dispose of all removed parts in accordance with section IX.
8. Update applicable records and forms in accordance with section VIII.

VII. PROCEDURE (CONTINUED)

E. MODIFICATION OF NAVIGATION BASE ASSEMBLY LEM, P/N 6899980-011 (G & N Systems 603 through 606). Perform modification as follows:

NOTE: Do not incorporate modification if IMU is mounted in spacecraft. If IMU is mounted in spacecraft, assign retrofit kit to system and install kit during installation of a replacement IMU or when an IMU has been removed and is being reinstalled.

1. Obtain retrofit kit, P/N 8102684.

2. Obtain Navigation Base Assembly LEM, P/N 6899980-011, and remove the following items:

Qty	Part Number	Description
2	NAS674V18	Bolt, hex cap
2	2899992	Bolt, IMU mount

3. Obtain the following items from retrofit kit, P/N 8102684, and add to Navigation Base Assembly LEM, P/N 6899980-011 (kit):

Qty	Part Number	Description
4	NAS674V19	Bolt, hex cap
2	2021204	Bushing, sleeving-IMU mount

VII. E. PROCEDURE (CONTINUED)

4. Obtain identification plate, P/N 1004260-508, from retrofit kit and transfer serial number and contract number from existing identification plate on Navigation Base Assembly LEM, P/N 6899978-011 (final machined) to new plate. Use typewriter (with ribbon removed) to imprint information on new identification plate. (Height of typewriter characters should be 0.057 to 0.067 inches.)

WARNING: Methyl-ethyl-ketone (MEK) is toxic and inflammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

5. Clean surface of old identification plate with MEK.

6. Mount new identification plate over old plate using 1011541 epoxy adhesive applied in accordance with ND 1002219, method II.

7. Dispose of all removed parts in accordance with section IX.

8. Update applicable records and forms in accordance with section VIII.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

   e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

   f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. **MODIFICATION DESIGNATION** (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.
2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.
3. Repair - If a repair; check the repair block.
4. Complete the chart as follows:
    - a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.
    - b. Qty. - Insert the quantity of the added and/or removed part.
    - c. Part Name - Insert the name of the added and/or removed part.
    - d. P/N - Insert the part number of the added and/or removed part.
    - e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.
    - f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. **MODIFICATION DESIGNATION** (CONTINUED)

- g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.
2. Make necessary entry in the Equipment Inventory Record sheet.
3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

VIII. **MODIFICATION DESIGNATION** (CONTINUED)

E. Significant part number changes resulting from this modification are listed in section III.

IX. **DISPOSITION OF PARTS REMOVED**

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

ACC Form No. 1
2/23/66

Typical [illegible] with regular typewriter

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ____________ Date: ________ G&N # ________

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No. 1a for each of the following levels of equipment.

BLACK BOXES, REPARABLE SUB-ASSEMBLIES

* or equivalent

VII. PROCEDURE

A. GENERAL REQUIREMENTS

1. Read and understand complete RIB prior to attempting this modification.

2. Obtain following documents for use in performing this modification:
   ND 1002279
   ND 1002291
   ND 1002040
   ND 1002019

3. All workmanship shall meet the minimum requirements defined in Workmanship Standard AC-STD-1, dated 15 January 1965.

4. Ink Markings.

   a. Markings to be removed should be removed using lacquer thinner.

   b. New markings shall meet requirements of ND 1002019. Do not apply a coat of clear flat lacquer after ink has dried to pin identifications.

5. When marking is specified, hand marking is acceptable.

VII. A. PROCEDURE (CONTINUED)

6. Remove harnesses "A" through "H" (see Table 1) from containers and perform visual inspection prior to performing detailed modifications.

7. Insure protective covers or plates are on all connector plugs not being modified prior to performing detailed modifications.

B. DETAILED PROCEDURES. Perform modifications to connectors contained in Table 2 in accordance with paragraphs C and D.

NOTE: Paragraph C is a typical example to be used for refinishing all nine (9) connectors contained in Table 2.

CDU

C. DETAILED REFINISHING PROCEDURE.
Refinish CDU electrical connector plug, P/N 2014741-011, P9, as follows.

1. After wiring harness "A" has had a visual inspection, place on bench with CDU connector plug (P9) accessable.

2. Remove 4 jack screws, P/N 1004579-1, and 8 flat washers, P/N's 1004546-1 and 1004546-3, from connector by removing external retaining rings, P/N MS16633-4015. See figure 1 for reference.

VII. C. PROCEDURE (CONTINUED)

3. Remove 2 captive cap. socket head screws, P/N 1008827-1, and 2 flat washers, P/N 1004546-3, from connector. See figure 1 for reference.

4. Clean connector base, P/N 2010658, and shell, P/N 2014754, using Isopropyl alcohol, P/N FED-TT-1-735, and Freon, Dupont, type TF. Wait one hour before proceeding to next step.

5. Mask pin area on bottom of CDU connector and all exposed areas of the harness above the connector in accordance with ND 1002291. See figures 1 and 2 for reference.

6. Record all pin numbers and other identification markings which will be covered by painting. Make special note of pin markings with respect to polarizing holes and physical size of connector base to ensure correct marking after connector has been painted.

7. Obtain epoxy polyamide primer, P/N 1010992, from kit and prepare in accordance with ND 1002279.

NOTE: Primer coat shall be dried for a minimum of one hour at room temperature prior to applying first coat of paint.

8. Spray complete connector with primer prepared in step 7 in accordance with ND 1002279.

VII. C. PROCEDURE (CONTINUED)

9. Obtain dark gray epoxy paint, P/N 1008809-1, from kit and prepare an ample amount to paint CDU connector in accordance witn ND 1002279.

10. Apply a spray coat of paint prepared in step 9 to complete connector in accordance with ND 1002279.

11. Allow connector a minimum of 30 minutes to air dry, then install in oven and bake for 35 minutes at a temperature of 140 ± 5 degrees F.

12. Obtain light-diffusing coating kit P/N 1012543-003 from kit and prepare an ample amount to paint connector in accordance with ND 1002291.

13. Apply a spray coat of paint prepared in step 12 to complete CDU connector in accordance with ND 1002291. CDU

14. Allow connector a minimum of 15 minutes to air dry, then install in oven and bake for 24 hours at a temperature of 140 ± 5 degrees F.

15. Remark all pin numbers and other identification markings which were covered in step 8. Make sure connector is correctly marked. (See note 1.)

16. Remove masking tape.

VII. C. PROCEDURE (CONTINUED)

17. Using a piloted counterbore, remove paint from immediate area around four (4) jack screw holes on top side of connector base. See figure 1, top view.

18. Thoroughly clean all surfaces where masking tape and paint have been removed in accordance with ND 1002291.

19. Apply Dow 19 (MIL-M-3171, type 6) to jack screw holes where paint has been removed in accordance with ND 1002040.

20. Repeat steps 1 through 19 for remaining connectors (see table 2). Part numbers for hardware being removed are identical, except connector plugs 56P18, 56P19, 56P17, 56P26, 56P28, 56P29, and 56P27, which contain jack screws, P/N 1004579-3 rather than jack screws, P/N 1004579-1.

21. Proceed to paragraph D after all connectors in table 2 have been painted.

NOTE 1: When remarking information on shell of connectors, replace harness part numbers with new part numbers, located in table 1. (Harness "A" part number information is located on connector 56P10.)

VII. PROCEDURES (CONTINUED)

D. DETAILED JACK SCREW AND CAPTIVE SCREW INSTALLATION. Install jack screws and captive screws as follows:

1. Jack Screw Installation Procedure for Connector Plugs 56P9 & 56P10.

a. Obtain the following items from retrofit kit.

Qty	Part Number	Description
8	2010782-002	Jack screws
8	2010767-003	Step washers
4	2010757-004	Step washers
12	2010768	Gaskets
8	1004207	Drive cylinders
8	2004148-010	Washer
8	MS171433	Pins
4	1008827-002	Captive cap. socket head screws

NOTE: Use figure 3 in conjunction with following steps for installation.

b. Obtain a jack screw, P/N 2010782-002, and install a washer, P/N 2004148-010.

c. Install jack screw up through bottom of connector base. (Jack screws are installed in all 4 corners of the connectors.)

VII. D. PROCEDURE (CONTINUED)

d. Obtain gasket, P/N 2010768 and step washer, P/N 2010767-003 and install gasket on step washer.

e. Install gasket & step washer on jack screw. Ensure gasket is toward connector.

f. Obtain drive cylinder, P/N 1004207, and install on jack screw.

g. Obtain pin, P/N MS171433. Align hole in jack screw with hole in drive cylinder and install pin.

h. Repeat steps c through g for remaining corners of both connectors.

2. Captive Screw Installation Procedures for Connector Plugs 56P9 & 56P10.

a. Obtain a step washer P/N 2010767-004, and gasket, P/N 2010768. Install gasket on step washer.

b. Obtain captive cap. socket head screw, P/N 1008827-002, and install step washer and gasket. Ensure gasket is facing away from captive screw head.

VII. D. PROCEDURE (CONTINUED)

c. Screw captive screw through threaded hole in connector base. (Only center holes are threaded.)

d. Repeat steps a through c for installation of remaining captive screws in connector base center holes.

3. Jack Screw Installation Procedure for Connector Plugs 56P18, 56P19, 56P17, 56P26, 56P28, 56P29, and 56P27.

a. Obtain the following items for connector plugs listed above.

Qty	Part Number	Description
28	2010782-001	Jack Screw
28	2010767-001	Step washer
34	2010768	Gaskets
28	1004207	Drive cylinder
28	2004148-010	Washer
28	MS171433	Pins
6	1008827-003	Captive cap. socket head screws
6	2010767-002	Step washer

NOTE: Use figure 3 in conjunction with the following steps for installation.

b. Obtain a jack screw, P/N 2010782-001, and install a washer, P/N 2004148-010.

VII. D. PROCEDURE (CONTINUED)

c. Install jack screw up through bottom of connector base. (Jack screws are installed in all 4 corners of the connectors.)

d. Obtain gasket, P/N 2010768, and step washer, P/N 2010767-001, and install gasket on step washer.

e. Install gasket and washer on jack screw. Ensure gasket is toward connector.

f. Obtain drive cylinder, P/N 1004207, and install on jack screw.

g. Obtain pin, P/N MS171433. Align hole in jack screw with hole in drive cylinder and install pin.

h. Repeat steps c through g for remaining corners of connectors.

4. Captive Screw Installation Procedures for Connector Plugs 56P19, 56P17, and 56P29.

a. Obtain a step washer, P/N 2010767-002, and gasket, P/N 2010768. Install gasket on step washer.

VII. D. PROCEDURE (CONTINUED)

b. Obtain captive cap. socket head screw, P/N 1008827-003, and install step washer and gasket. Ensure gasket is facing away from captive screw head.

c. Screw captive screw through threaded hole in connector base. (Only center holes are threaded.)

d. Repeat steps a through c for installation of remaining captive screws in connectors 56P19, 56P17, and 56P29. (Center threaded holes.)

5. Dispose of all removed parts in accordance with section IX.

6. Update applicable records and forms as indicated in section VIII.

Table 1. Harness Information

Harness Number	Connector Number	Connector Pre-Modification P/N	Connector Post-Modification P/N
A	56P9 & 56P10	2014641	2010774
B	56P18	2014642	2010775
C	56P19	2014643	2010776

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

   e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

   f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

VIII. MODIFICATION DESIGNATION (CONTINUED)

E. See Tables 1 and 2 for part number changes resulting from this modification.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ____________ Date: ________ G&N # ______

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No.1a for each of the following levels of equipment.

BLACK BOXES, REPARABLE SUB-ASSEMBLIES

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Navigation Base and Optical Unit Assembly. This modification is being performed to add the astrosextant passive thermal protective system to prevent thermal damage to the optics and bellows on reentry.

II. AUTHORITY

This retrofit is authorized by CCA-497-0309, REV 1, in liew of approval of ECP-0427.

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Navigation Base	1899950-191	1899950-311
Navigation Base	1899950-211	1899950-321

IV. PRIORITY CHANGES

Not applicable

V. RELATED CHANGES

Not applicable

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102691, consisting of the following items is required to modify the Navigation Base and Optical Unit Assembly.

Qty	Part Number	Description
1	1021382	Seat, sextant cover
4	1008487-001	Screw, slotted hd. cap
1	1008487-002	Screw, slotted hd. cap
4	1008487-003	Screw, slotted hd. cap
13	1008486	Washer, flat
4	1008488	Screw, slotted, special
7	1008493	Insulator
1	1008495	Seat, telescope cover
4	1008494	Screw, flat head
1	1008490	Cover and Baffle Telescope (Insep Assy)
1	1008480	Cover and Baffle Sextant (Insep Assy)
1	1021377	Crown Half & Plug Assy Telescope (Matched Assy)
1	1021378	Crown Half & Plug Assy Sextant (Matched Assy)
4	1008484-000	Screw, captive
1	1014650-19	Nameplate
1	0102662	Retrofit Instruction Bulletin
2	1021379	Fastener, Screw Tube, Flat Hd.
1	1012196	Nameplate
1	1021383	Clamp
6	1008484-001	Screw, Captive
1	1021340	Potting Ring, Telescope

VI. MATERIALS REQUIRED

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
AR	TT-M-261	Methyl-Ethyl-Ketone (MEK)
AR	FED-TT-I-735	Isopropyl alcohol
AR	DuPont Type TF	Freon
AR	N/A	Adhesive (MIL-S-22473, grade C) Sealing and retaining compound
1	ND1002329-001	Process specification for bonding with 1008903 adhesive (EPON 954)
AR	1008903	Adhesive (EPON 954)
AR	N/A	Surface Primer (MIL-S-22473, Grade N, Form R)
AR	1011541	Adhesive, Epoxy

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Obtain Retrofit Kit, P/N 8102691, and perform modifications to telescope head, in accordance with paragraph C, and sextant head, in accordance with paragraph D.

C. TELESCOPE HEAD.

1. Remove existing cover, P/N 2012547, from telescope head and dispose as per direction given in section IX.

   NOTE: When loosening four (4) captive screws, P/N 1008484-000, no more than 2 turns per screw, alternating until loose.

2. Obtain telescope cover seat, P/N 1008495, and cover and baffle, P/N 1008490, install four (4) captive screws, P/N 1008484-000, into telescope cover and baffle assembly. Assemble seat and cover to telescope head. Orient assembly so telescope scans 45° off the optics center line in direction of worm shaft bearing retaining cap, P/N 2011186, and seat the assembly on the telescope prism mount support, P/N 2011185-000 or 011 for a fit check. Check for proper seating of assembly, proper clearance of optics, and mounting screw hole alignment.

VII. C. PROCEDURE (CONTINUED)

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

NOTE: Do not clean painted surfaces with MEK.

3. Remove telescope cover seat from cover assembly and clean telescope cover seat with MEK. Rinse with isopropyl alcohol and freon.

4. Install telescope potting ring, P/N 1021340, between telescope head seating surface and telescope cover seat, P/N 1008495. See figure 1.

5. Obtain adhesive, P/N 1008903 (hereafter referred to as EPON 954) and prepare in accordance with ND 1002329-001.

6. Apply a narrow band of adhesive EPON 954 to telescope cover seat. (See figure 3).

7. Clean adhesive from all surfaces not to be bonded. Install telescope cover seat making certain alignment repeats trial fit orientation.

VII. C. PROCEDURE (CONTINUED)

8. Install telescope cover and baffle, P/N 1008490. Align the four (4) holes of cover and baffle with holes in telescope seat cover and attach with four (4) captive screws, P/N 1008484-000. Torque screws 5 to 6 inch pounds.

   NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473 Grade N, Form R, and allow to dry.

9. Apply adhesive, MIL-S-22473, grace C to threads of flat head screws, P/N 1008494. Insert screws through cover and baffle, P/N 1008490 and torque assembly to telescope head 4 ± 1 inch pounds. Ensure assembly is fully seated to telescope before torquing screws. Check for proper clearance of optics and telescope cover.

   NOTE: Rotate telescope by hand every 15 minutes for 1 hour.

10. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

VII. PROCEDURE (CONTINUED)

D. SEXTANT HEAD.

1. Remove existing cover, P/N 2012675, from sextant head. Do NOT remove the two (2) 6 inch long threaded studs, P/N 2011603. Discard slotted nuts, P/N 2011602, and cover, P/N 2012675, in accordance with section IX.

   CAUTION: Avoid any damage to flex print circuit board.

   NOTE: If any interference problems are encountered, reorient flex print to provide clearance.

2. Trial fit sextant cover seat, P/N 1021382, and clamp, P/N 1021383, to sextant head. Check for proper seating to sextant head.

3. Rotate sextant so that sextant flex print circuit board junction is in lowest position.

   CAUTION: Move mirror by using top of mirror and move it very slowly from stop to stop. Do NOT touch mirror surface.

   NOTE: Ensure assembly does not bind with flex print during or after installation.

VII. D. PROCEDURE (CONTINUED)

4. Install 6 captive screws, P/N 1008484-001, into cover and baffle assembly. Temporarily attach sextant cover and baffle assembly, P/N 1008480 to seat (see step 2) using (6) captive screws (1008484-001) and two screw tube fasteners, P/N 1021379, to long studs. Check clearance between sextant mirror and sextant cover and baffle assembly, P/N 1008480. Carefully move mirror from stop to stop and check clearance on each side. Rotate cover and baffle assy to provide approximately 1/8 inch clearance between mirror, mirror mount, and mirror bracket.

5. Remove sextant cover seat, sextant cover clamp and sextant baffle assembly. (Separate cover seat and clamp from cover and baffle assembly.)

   WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

   CAUTION: Do not apply MEK to painted surfaces.

6. Clean sextant cover seat with MEK. Rinse with isopropyl alcohol and freon.

VII. D. PROCEDURE (CONTINUED)

7. Apply a narrow band of adhesive EPON 954 to sextant cover seat, P/N 1021382, see figure 3. Remove any excess adhesive. Clean adhesive from all surfaces not to be bonded.

8. Carefully install sextant cover seat, P/N 1021382 and sextant cover clamp, P/N 1021383, over flex print circuit board and seat properly to sextant housing, orient screw holes to location obtained during trial fit (step 2).

9. Lower sextant cover and baffle assembly onto sextant cover seat. Align holes and secure assembly to seat with six (6) captive screws, P/N 1008484-001. Torque 5 to 6 inch pounds. Check clearance as described in paragraph (4).

10. Apply sealing and retaining compound, MIL-S-22473, to threads of two (2) screw tube fasteners, P/N 1021379, and torque to 4 ± 1 inch pounds. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

E. TELESCOPE AND SEXTANT LOWER CROWN HALVES.

1. Remove potting ring, P/N 1021340, from telescope. Remove potting ring by pulling attached strings until ring splits apart. After ring splits, pull away from telescope assembly and dispose of potting ring in accordance with section IX.

VII. E. PROCEDURE (CONTINUED)

2. When NAA supplied inner ablator assembly is installed (see figure 1), perform trial fit of sextant/telescope crown. To determine amount of material to be removed from inner ablator assembly to provide .187 gap clearance.

3. Obtain crown half and plug assembly, P/N 1021378. Remove fillet protector and plugs but identify plugs so they may be returned in same holes.

4. Assemble and match crown half lower telescope cover to cover and baffle assembly with two (2) screws, P/N 1008487-003, and two (2) washers, P/N 1008486.

   NOTE: Ensure sextant lower crown half, P/N 1021329 slot openings are installed parallel to slot openings in cover and baffle assembly, P/N 1008480.

5. Obtain crown half upper sextant cover, P/N 1021320. (Part of crown half and plug assembly, P/N 1021377.) Remove plugs, P/N 1021322-002, identify plugs in order to reassemble in same holes.

6. Install crown half lower sextant cover, P/N 1021329, to sextant cover and baffle assembly, P/N 1008480, using four (4) insulators, P/N 1008493, four (4) washers, P/N 1008486, and four (4) sextant cover special slotted screws, P/N 1008488.

VII. E. PROCEDURE (CONTINUED)

   NOTE: There shall be a minimum of 1/32 inch clearance between crown halves of the sextant lower crown half and telescope lower crown half. If 1/32 inch clearance is obtained, remove screws and apply sealing and retaining compound, MIL-S-22473, grade C, to threads of sextant's (4) special slotted screws, P/N 1008493, and telescope's (2) slotted head cap screws, P/N 1008487-003, torque to 9 ± 1 inch pounds, and skip to step VII. F.1. If clearance is not obtained, perform step 7.

7. Remove sextant lower crown half and telescope lower crown half. Remove material from telescope lower crown half until there is a minimum clearance of 1/32 inch between crown halves. Replace sextant and telescope lower crown halves and apply sealing and retaining compound, MIL-S-22473, grade C, to threads of screws and torque to 9 ± 1 inch pounds.

F. TELESCOPE

1. Position and orient fillet protector, P/N 1008496, to lower crown half. Install 3 insulators P/N 1008493 into appropriate holes in the lower crown half. Attach with total of three screws (one (1), P/N 1008487-002, two (2), P/N 1008487-003) and three (3) washers, P/N 1008486. Apply sealing and retaining compound, MIL-S-22473, grade C to threads. Torque screws to 9 ± 1 inch pounds.

VII. F. PROCEDURE (CONTINUED)

2. Three (3) plugs, P/N 1021322-002 (removed in step VII.E.3), are inserted into telescope cover protector fillet, P/N 1008496. Surfaces shall be flush.

3. Vacuum area to remove loose chips and dirt.

G. SEXTANT

1. Obtain sextant cover upper crown halves, P/N 1021320, and install using four (4) washers, P/N 1008486, and four (4) slotted head cap screws, P/N 1008487-001, apply sealing and retaining compound, MIL-S-22473, grade C. Torque screws to 9 ± 1 inch pounds.

2. Obtain four (4) plugs P/N 1021322-001, removed in step VII.E.5, and screw plugs into place so they are flush with outer surface.

3. Vacuum area to remove loose chips and dirt.

VII. PROCEDURE (CONTINUED)

H. NAMEPLATES.

1. Transfer serial number and contract number from existing nameplate on Navigation Base and Optical Unit Assembly to new nameplate, P/N 1014650-19, supplied in retrofit kit. Imprint applicable three digit post modification dash number to pre-stamped part number, (1899950) on new identification plate as determined from section III. Use typewriter (with ribbon removed) to imprint information on new nameplate. (Height of typewriter characters should be 0.057 to 0.067 inches.)

2. Remove existing nameplate from Navigation Base and Optical Unit Assembly.

3. Clean nameplate mounting surface with MEK.

4. Apply MEK to activate adhesive on back of new nameplate. Allow activated adhesive to air dry until surface becomes tacky before performing next step.

5. Apply new nameplate to same location as occupied by old nameplate.

VII. H. PROCEDURE (CONTINUED)

6. Transfer serial number and contract number from existing nameplate on Optical Unit Assembly to new nameplate, P/N 1012196, supplied in retrofit kit. Imprint applicable three digit post modification dash number to pre-stamped part number, (1021368) on new identification plate as determined from section III. Use typewriter (with ribbon removed) to imprint information on new nameplate. (Height of typewriter characters should be 0.057 to 0.067 inches.)

7. Remove existing nameplate from Optical Unit Assembly.

8. Clean nameplate mounting surface with MEK.

9. Abrade back nameplate, P/N 1012196, and clean with MEK. Apply epoxy adhesive, P/N 1011541, to back of nameplate.

10. Apply new nameplate to same location as occupied by old nameplate.

11. Update applicable records as directed in section VIII.

12. Dispose of removed parts in accordance with section IX.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

   e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

   f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

VIII. MODIFICATION DESIGNATION

E. Significant part number changes resulting from this modification are listed in section III.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

ACC Form No. 1
2/23/66

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ______________________ Date: __________ G&N # ______

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No. 1a for each of the following levels of equipment.

BLACK BOXES, REPARABLE SUB-ASSEMBLIES

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Navigation Base and Optical Unit Assembly. This modification is being performed to add the astrosextant passive thermal protective system to prevent thermal damage to the optics and bellows on reentry.

II. AUTHORITY

This retrofit is authorized by CCA-497-0309, REV 1, in liew of approval of ECP-0427.

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Navigation Base	1899950-191	1899950-311
Navigation Base	1899950-211	1899950-321

IV. PRIORITY CHANGES

Not applicable

V. RELATED CHANGES

Not applicable

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102691, consisting of the following items is required to modify the Navigation Base and Optical Unit Assembly.

Qty	Part Number	Description
1	1021382	Seat, sextant cover
4	1008487-001	Screw, slotted hd. cap
1	1008487-002	Screw, slotted hd. cap
4	1008487-003	Screw, slotted hd. cap
13	1008486	Washer, flat
4	1008488	Screw, slotted, special
7	1008493	Insulator
1	1008495	Seat, telescope cover
4	1008494	Screw, flat head
1	1008490-011	Cover and Baffle Telescope (Insep Assy)
1	1008480-011	Cover and Baffle Sextant (Insep Assy)
1	1021377-011	Crown Half & Plug Assy Telescope (Matched Assy)
1	1021378-011	Crown Half & Plug Assy Sextant (Matched Assy)
4	1008484-000	Screw, captive
1	1014650-19	Nameplate
1	0102662	Retrofit Instruction Bulletin
2	1021379	Fastener, Screw Tube, Flat Hd.
1	1012196	Nameplate
1	1021383	Clamp
6	1008484-001	Screw, Captive
1	1021340	Potting Ring, Telescope

VI. MATERIALS REQUIRED

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
AR	TT-M-261	Methyl-Ethyl-Ketone (MEK)
AR	FED-TT-I-735	Isopropyl alcohol
AR	DuPont Type TF	Freon
AR	N/A	Adhesive (MIL-S-22473, grade C) Sealing and retaining compound
1	ND1002329-001	Process specification for bonding with 1008903 adhesive (EPON 954)
AR	1008903	Adhesive (EPON 954)
AR	N/A	Surface Primer (MIL-S-22473, Grade N, Form R)
AR	1011541	Adhesive, Epoxy

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

VII. PROCEDURE (CONTINUED)

B. DETAILED INSTRUCTIONS. Obtain Retrofit Kit, P/N 8102691, and perform modifications to telescope head, in accordance with paragraph C, and sextant head, in accordance with paragraph D.

C. TELESCOPE HEAD.

1. Remove existing cover, P/N 2012547, from telescope head and dispose as per direction given in section IX.

   NOTE: When loosening four (4) captive screws, P/N 1008484-000, no more than 2 turns per screw, alternating until loose.

2. Obtain telescope cover seat, P/N 1008495, and cover and baffle, P/N 1008490-011, install four (4) captive screws, P/N 1008484-000, into telescope cover and baffle assembly. Assemble seat and cover to telescope head. Orient assembly so telescope scans 45° off the optics center line in direction of worm shaft bearing retaining cap, P/N 2011186, and seat the assembly on the telescope prism mount support, P/N 2011185-000 or 011 for a fit check. Check for proper seating of assembly, proper clearance of optics, and mounting screw hole alignment.

VII. C. PROCEDURE (CONTINUED)

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

NOTE: Do not clean painted surfaces with MEK.

3. Remove telescope cover seat from cover assembly and clean telescope cover seat with MEK. Rinse with isopropyl alcohol and freon.

4. Install telescope potting ring, P/N 1021340, between telescope head seating surface and telescope cover seat, P/N 1008495. See figure 1.

5. Obtain adhesive, P/N 1008903 (hereafter referred to as EPON 954) and prepare in accordance with ND 1002329-001.

6. Apply a narrow band of adhesive EPON 954 to telescope cover seat. (See figure 3).

7. Clean adhesive from all surfaces not to be bonded. Install telescope cover seat making certain alignment repeats trial fit orientation.

VII. C. PROCEDURE (CONTINUED)

8. Install telescope cover and baffle, P/N 1008490-011. Align the four (4) holes of cover and baffle with holes in telescope seat cover and attach with four (4) captive screws, P/N 1008484-000. Torque screws 5 to 6 inch pounds.

   NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473 Grade N, Form R, and allow to dry.

9. Apply adhesive, MIL-S-22473, grace C to threads of flat head screws, P/N 1008494. Insert screws through cover and baffle, P/N 1008490-011 and torque assembly to telescope head 4 ± 1 inch pounds. Ensure assembly is fully seated to telescope before torquing screws. Check for proper clearance of optics and telescope cover.

   NOTE: Rotate telescope by hand every 15 minutes for 1 hour.

10. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

VII. PROCEDURE (CONTINUED)

D. SEXTANT HEAD.

1. Remove existing cover, P/N 2012675, from sextant head. Do NOT remove the two (2) 6 inch long threaded studs, P/N 2011603. Discard slotted nuts, P/N 2011602, and cover, P/N 2012675, in accordance with section IX.

   CAUTION: Avoid any damage to flex print circuit board.

   NOTE: If any interference problems are encountered, reorient flex print to provide clearance.

2. Trial fit sextant cover seat, P/N 1021382, and clamp, P/N 1021383, to sextant head. Check for proper seating to sextant head.

3. Rotate sextant so that sextant flex print circuit board junction is in lowest position.

   CAUTION: Move mirror by using top of mirror and move it very slowly from stop to stop. Do NOT touch mirror surface.

   NOTE: Ensure assembly does not bind with flex print during or after installation.

VII. D. PROCEDURE (CONTINUED)

4. Install 6 captive screws, P/N 1008484-001, into cover and baffle assembly. Temporarily attach sextant cover and baffle assembly, P/N 1008480-011 TO seat (see step 2) using (6) captive screws (1008484-001) and two screw tube fasteners, P/N 1021379, to long studs. Check clearance between sextant mirror and sextant cover and baffle assembly, P/N 1008480-011. Carefully move mirror from stop to stop and check clearance on each side. Rotate cover and baffle assy to provide approximately 1/8 inch clearance between mirror, mirror mount, and mirror bracket.
5. Remove sextant cover seat, sextant cover clamp and sextant baffle assembly. (Separate cover seat and clamp from cover and baffle assembly.)

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

CAUTION: Do not apply MEK to painted surfaces.

6. Clean sextant cover seat with MEK. Rinse with isopropyl alcohol and freon.

VII. D. PROCEDURE (CONTINUED)

7. Apply a narrow band of adhesive EPON 954 to sextant cover seat, P/N 1021382, see figure 3. Remove any excess adhesive. Clean adhesive from all surfaces not to be bonded.

8. Carefully install sextant cover seat, P/N 1021382 and sextant cover clamp, P/N 1021383, over flex print circuit board and seat properly to sextant housing, orient screw holes to location obtained during trial fit (step 2).

9. Lower sextant cover and baffle assembly onto sextant cover seat. Align holes and secure assembly to seat with six (6) captive screws, P/N 1008484-001. Torque 5 to 6 inch pounds. Check clearance as described in paragraph (4).

10. Apply sealing and retaining compound, MIL-S-22473, to threads of two (2) screw tube fasteners, P/N 1021379, and torque to 4 ± 1 inch pounds. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

E. TELESCOPE AND SEXTANT LOWER CROWN HALVES.

1. Remove potting ring, P/N 1021340, from telescope. Remove potting ring by pulling attached strings until ring splits apart. After ring splits, pull away from telescope assembly and dispose of potting ring in accordance with section IX.

VII. E. PROCEDURE (CONTINUED)

2. When NAA supplied inner ablator assembly is installed (see figure 1), perform trial fit of sextant telescope crown. To determine amount of material to be removed from inner ablator assembly to provide .187 gap clearance.

3. Obtain crown half and plug assembly, P/N 1021378-011. Remove fillet protector and plugs but identify plugs so they may be returned in same holes.

4. Assemble and match crown half lower telescope cover to cover and baffle assembly with two (2) screws, P/N 1008487-003, and two (2) washers, P/N 1008486.

NOTE: Ensure sextant lower crown half, P/N 1021329 slot openings are installed parallel to slot openings in cover and baffle assembly, P/N 1008480-011.

5. Obtain crown half upper sextant cover, P/N 1021320. (Part of crown half and plug assembly, P/N 1021377-011) Remove plugs, P/N 1021322-002, identify plugs in order to reassemble in same holes.

6. Install crown half lower sextant cover, P/N 1021329, to sextant cover and baffle assembly, P/N 1008480-011, using four (4) insulators, P/N 1008493, four (4) washers, P/N 1008486, and four (4) sextant cover special slotted screws, P/N 1008488.

VII. E. PROCEDURE (CONTINUED)

NOTE: There shall be a minimum of 1/32 inch clearance between crown halves of the sextant lower crown half and telescope lower crown half. If 1/32 inch clearance is obtained, remove screws and apply sealing and retaining compound, MIL-S-22473, grade C, to threads of sextant's (4) special slotted screws, P/N 1008493, and telescope's (2) slotted head cap screws, P/N 1008487-003, torque to 9 ± 1 inch pounds, and skip to step VII. F.1. If clearance is not obtained, perform step 7.

7. Remove sextant lower crown half and telescope lower crown half. Remove material from telescope lower crown half until there is a minimum clearance of 1/32 inch between crown halves. Replace sextant and telescope lower crown halves and apply sealing and retaining compound, MIL-S-22473, grade C, to threads of screws and torque to 9 ± 1 inch pounds.

F. TELESCOPE

1. Position and orient fillet protector, P/N 1008496, to lower crown half. Install 3 insulators P/N 1008493 into appropriate holes in the lower crown half. Attach with total of three screws (one (1), P/N 1008487-002, two (2), P/N 1008487-003) and three (3) washers, P/N 1008486. Apply sealing and retaining compound, MIL-S-22473, grade C to threads. Torque screws to 9 ± 1 inch pounds.

VII. F. PROCEDURE (CONTINUED)

2. Three (3) plugs, P/N 1021322-002 (removed in step VII.E.3), are inserted into telescope cover protector fillet, P/N 1008496. Surfaces shall be flush.

3. Vacuum area to remove loose chips and dirt.

G. SEXTANT

1. Obtain sextant cover upper crown halves, P/N 1021320, and install using four (4) washers, P/N 1008486, and four (4) slotted head cap screws, P/N 1008487-001, apply sealing and retaining compound, MIL-S-22473, grade C. Torque screws to 9 ± 1 inch pounds.

2. Obtain four (4) plugs P/N 1021322-001, removed in step VII.E.5, and screw plugs into place so they are flush with outer surface.

3. Vacuum area to remove loose chips and dirt.

VII. PROCEDURE (CONTINUED)

H. NAMEPLATES.

1. Transfer serial number and contract number from existing nameplate on Navigation Base and Optical Unit Assembly to new nameplate, P/N 1014650-19, supplied in retrofit kit. Imprint applicable three digit post modification dash number to pre-stamped part number, (1899950) on new identification plate as determined from section III. Use typewriter (with ribbon removed) to imprint information on new nameplate. (Height of typewriter characters should be 0.057 to 0.067 inches.)

2. Remove existing nameplate from Navigation Base and Optical Unit Assembly.

3. Clean nameplate mounting surface with MEK.

4. Apply MEK to activate adhesive on back of new nameplate. Allow activated adhesive to air dry until surface becomes tacky before performing next step.

5. Apply new nameplate to same location as occupied by old nameplate.

VII. H. PROCEDURE (CONTINUED)

6. Transfer serial number and contract number from existing nameplate on Optical Unit Assembly to new nameplate, P/N 1012196, supplied in retrofit kit. Imprint applicable three digit post modification dash number to pre-stamped part number, (1021368) on new identification plate as determined from section III. Use typewriter (with ribbon removed) to imprint information on new nameplate. (Height of typewriter characters should be 0.057 to 0.067 inches.)

7. Remove existing nameplate from Optical Unit Assembly.

8. Clean nameplate mounting surface with MEK.

9. Abrade back nameplate, P/N 1012196, and clean with MEK. Apply epoxy adhesive, P/N 1011541, to back of nameplate.

10. Apply new nameplate to same location as occupied by old nameplate.

11. Update applicable records as directed in section VIII.

12. Dispose of removed parts in accordance with section IX.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

Sheet 20 of 25
Part No. 0102662
Date: 18 OCT 66
TDRR
Revision B

VIII. MODIFICATION DESIGNATION (CONTINUED)

   d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

   e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

   f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

VIII. MODIFICATION DESIGNATION

E. Significant part number changes resulting from this modification are listed in section III.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

ACC Form No. 1
2/23/66

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ______________ Date: ________ G&N # ________

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No. 1a for each of the following levels of equipment.

BLACK BOXES, REPARABLE SUB-ASSEMBLIES

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Navigation Base and Optical Unit Assembly. This modification is being performed to add the astrosextant passive thermal protective system to prevent thermal damage to the optics and bellows on reentry.

II. AUTHORITY

This retrofit is authorized by CCA-497-0309, REV 1, in lieu of approval of ECP-0427.

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Navigation Base	1899950-191	1899950-311
Navigation Base	1899950-211	1899950-321

IV. PRIORITY CHANGES

Not applicable

V. RELATED CHANGES

Not applicable

VI. MATERIALS REQUIRED

A. Retrofit Kit, P/N 8102691, consisting of the following items is required to modify the Navigation Base and Optical Unit Assembly.

Qty	Part Number	Description
1	1021382	Seat, sextant cover
4	1008487-001	Screw, slotted hd. cap
1	1008487-002	Screw, slotted hd. cap
4	1008487-003	Screw, slotted hd. cap
13	1008486	Washer, flat
4	1008488	Screw, slotted, special
7	1008493	Insulator
1	1008495	Seat, telescope cover
4	1008494	Screw, flat head
1	1008490-011	Cover and Baffle Telescope (Insep Assy)
1	1008480-011	Cover and Baffle Sextant (Insep Assy)
1	1021377-011	Crown Half & Plug Assy Telescope (Matched Assy).
1	1021378-011	Crown Half & Plug Assy Sextant (Matched Assy)
4	1008484-000	Screw, captive
1	1014650-19	Nameplate
1	0102662	Retrofit Instruction Bulletin
2	1021379	Fastener, Screw Tube, Flat Hd.
1	1012196	Nameplate
1	1021383	Clamp
6	1008484-001	Screw, Captive
1	1021340	Potting Ring, Telescope
1	[illegible]	

Sheet 4 of [illegible]
Part No. 0102662
Date: 18 OCT 66
TDRR
Revision D

VI. MATERIALS REQUIRED (CONTINUED)

1. Retrofit Kit, P/N 8102708, consisting of the following items, is provided if shimming of Sextant and Telescope Crowns is required:

Qty	Part Number	Description
1	0102662	Retrofit Instruction Bulletin
2	2021265-001	Spacer, Plate - SCT
1	2021265-002	Spacer, Plate - SCT
2	2021266-001	Spacer, Plate - SXT
1	2021266-002	Spacer, Plate - SXT
4	1008488-001	Screw, Slotted, Special, Sextant Cover
4	1008487-004	Screw, Cap, Slotted Hd.
1	1008487-005	Screw, Cap, Slotted Hd.

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
AR	TT-M-261	Methyl-Ethyl-Ketone (MEK)
AR	FED-TT-I-735	Isopropyl alcohol
AR	DuPont Type TF	Freon
AR	N/A	Adhesive (MIL-S-22473, grade C) Sealing and retaining compound
1	ND1002329-001	Process specification for bonding with 1008903 adhesive (EPON 954)
AR	1008903	Adhesive (EPON 954)
AR	N/A	Surface Primer (MIL-S-22473, Grade N, Form R)
AR	1011541	Adhesive, Epoxy

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.
2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

B. DETAILED INSTRUCTIONS. Obtain Retrofit Kit, P/N 8102691, and perform modifications to telescope head, in accordance with paragraph C, and sextant head, in accordance with paragraph D.

C. TELESCOPE HEAD.

1. Remove existing cover, P/N 2012547, from telescope head and dispose as per direction given in section IX.

   NOTE: When loosening four (4) captive screws, P/N 1008484-000, no more than 2 turns per screw, alternating until loose.

2. Obtain telescope cover seat, P/N 1008495, and cover and baffle, P/N 1008490-011, install four (4) captive screws, P/N 1008484-000, into telescope cover and baffle assembly. Assemble seat and cover to telescope head. Orient assembly so telescope scans 45° off the optics center line in direction of worm shaft bearing retaining cap, P/N 2011186, and seat the assembly on the telescope prism mount support, P/N 2011185-000 or 011 for a fit check. Check for proper seating of assembly, proper clearance of optics, and mounting screw hole alignment.

VII. C. PROCEDURE (CONTINUED)

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

NOTE: Do not clean painted surfaces with MEK.

3. Remove telescope cover seat from cover assembly and clean telescope cover seat with MEK. Rinse with isopropyl alcohol and freon.
4. Install telescope potting ring, P/N 1021340, between telescope head seating surface and telescope cover seat, P/N 1008495. See figure 1.
5. Obtain adhesive, P/N 1008903 (hereafter referred to as EPON 954) and prepare in accordance with ND 1002329-001.
6. Apply a narrow band of adhesive EPON 954 to telescope cover seat. (See figure 3).
7. Clean adhesive from all surfaces not to be bonded. Install telescope cover seat making certain alignment repeats trial fit orientation.

VII. C. PROCEDURE (CONTINUED)

8. Install telescope cover and baffle, P/N 1008490-011. Align the four (4) holes of cover and baffle with holes in telescope seat cover and attach with four (4) captive screws, P/N 1008484-000. Torque screws 5 to 6 inch pounds.

   NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473 Grade N, Form R, and allow to dry.

9. Apply adhesive, MIL-S-22473, grace C to threads of flat head screws, P/N 1008494. Insert screws through cover and baffle, P/N 1008490-011 and torque assembly to telescope head 4 ± 1 inch pounds. Ensure assembly is fully seated to telescope before torquing screws. Check for proper clearance of optics and telescope cover.

   NOTE: Rotate telescope by hand every 15 minutes for 1 hour.

10. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

VII. PROCEDURE (CONTINUED)

D. SEXTANT HEAD.

1. Remove existing cover, P/N 2012675, from sextant head. Do NOT remove the two (2) 6 inch long threaded studs, P/N 2011603. Discard slotted nuts, P/N 2011602, and cover, P/N 2012675, in accordance with section IX.

   CAUTION: Avoid any damage to flex print circuit board.

   NOTE: If any interference problems are encountered, reorient flex print to provide clearance.

2. Trial fit sextant cover seat, P/N 1021382, and clamp, P/N 1021383, to sextant head. Check for proper seating to sextant head.
3. Rotate sextant so that sextant flex print circuit board junction is in lowest position.

   CAUTION: Move mirror by using top of mirror and move it very slowly from stop to stop. Do NOT touch mirror surface.

   NOTE: Ensure assembly does not bind with flex print during or after installation.

VII. D. PROCEDURE (CONTINUED)

4. Install 6 captive screws, P/N 1008484-001, into cover and baffle assembly. Temporarily attach sextant cover and baffle assembly, P/N 1008480-011 TO seat (see step 2) using (6) captive screws (1008484-001) and two screw tube fasteners, P/N 1021379, to long studs. Check clearance between sextant mirror and sextant cover and baffle assembly, P/N 1008480-011. Carefully move mirror from stop to stop and check clearance on each side. Rotate cover and baffle assy to provide approximately 1/64 inch clearance between mirror, mirror mount, and mirror bracket.

5. Remove sextant cover seat, sextant cover clamp and sextant baffle assembly. (Separate cover seat and clamp from cover and baffle assembly.)

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

CAUTION: Do not apply MEK to painted surfaces.

6. Clean sextant cover seat with MEK. Rinse with isopropyl alcohol and freon.

VII. D. PROCEDURE (CONTINUED)

7. Apply a narrow band of adhesive EPON 954 to sextant cover seat, P/N 1021382, see figure 3. Remove any excess adhesive. Clean adhesive from all surfaces not to be bonded.

8. Carefully install sextant cover seat, P/N 1021382 and sextant cover clamp, P/N 1021383, over flex print circuit board and seat properly to sextant housing, orient screw holes to location obtained during trial fit (step 2).

9. Lower sextant cover and baffle assembly onto sextant cover seat. Align holes and secure assembly to seat with six (6) captive screws, P/N 1008484-001. Torque 5 to 6 inch pounds. Check clearance as described in paragraph (4).

10. Apply sealing and retaining compound, MIL-S-22473, to threads of two (2) screw tube fasteners, P/N 1021379, and torque to 4 ± 1 inch pounds. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

E. TELESCOPE AND SEXTANT LOWER CROWN HALVES.

1. Remove potting ring, P/N 1021340, from telescope. Remove potting ring by pulling attached strings until ring splits apart. After ring splits, pull away from telescope assembly and dispose of potting ring in accordance with section IX.

VII. E. PROCEDURE (CONTINUED)

2. Obtain crown half and plug assembly, telescope, P/N 1021377. Remove fillet protector P/N 1008496 and Plugs, P/N 1021322-002. Identify Plugs so they may be reassembled in same holes.

3. Assemble crown half, lower, P/N 1008497 to Cover & Baffle Assembly, P/N 1008490, using two screws, P/N 1008487-003, and two washers, P/N 1008486.

4. Measure gap between crown half, lower, P/N 1008497, and the NAA Inner Ablator Assembly. The gap shall be .188 to .250. If it is less than .188 a certain maximum amount of material, as determined by NAA personnel, may be removed from the Inner Ablator Assembly. If after the maximum amount of material has been removed from the Ablator Assembly and the .188 min. gap is not obtainable, any combination of spacers, 2021265-001 & 002 may be used between the Cover & Baffle Assy and the Crown half-lower to obtain the .188 to .250 gap. If spacers are required, Screws, P/N 1008487-003 will be replaced with P/N 1008487-004.

5. Obtain crown half and plug assembly, Sextant P/N 1021378. Remove two (2) Crown Halves, upper, P/N 1021320 and four (4) Plugs, P/N 1021322-001. Identify Crown Halves and Plugs in order to reassemble in same position.

VII. E. PROCEDURE (CONTINUED)

6. Assembly Crown Half, Lower, P/N 1021329, to Sextant Cover and Baffle Assembly, P/N 1008480, using four insulators, P/N 1008493, four washers, P/N 1008486 and four sextant cover special slotted screws, P/N 1003488.

7. Measure gap between the Crown half, lower and NAA Inner Ablator Assembly. The gap shall be .188 to .250. If it is less than .188, a certain maximum amount of material as determined by NAA personnel may be removed from Inner Ablator Assembly. If after the maximum amount of material has been removed from Inner Ablator, and the .188 min. gap is not obtainable, any combination of spacers, P/N 2021266 -001 and 002 may be used between Cover and Baffle Assembly to obtain the .188 to .250 clearance. If only one P/N 2021266-001 spacer is used, Screws, P/N 1008488 may be used. If more than one Spacer, P/N 2021266-001 is used, Screws, P/N 1008488-001 shall be used.

8. There shall be a minimum of 1/32" clearance between the Telescope Lower Crown Half and the Sextant Lower Crown Half when the Sextant and Scanning Telescope are each rotated thru 360°. If there is not sufficient clearance, remove sextant and telescope crown halves and remove material from telescope lower crown half to obtain the 1/32" minimum clearance. Replace sextant and telescope lower crown halves and spacers as determined from steps 4 and 7 above and apply sealing and retaining compound MIL-S-22473, Grade C, per ND 1002211 to the threads of the appropriate screws and torque to 9 ± 1 inch-pounds.

Sheet 13 of
Part No. 0102662
Date: 18 OCT 66
TDRR
Revision D

VII. PROCEDURE (CONTINUED)

F. TELESCOPE

1. Install 3 insulators, P/N 1008493, into appropriate holes in lower crown half. Position and orient fillet protector, P/N 1008496, to lower crown half. Attach with three screws (one (1) P/N 1008487-002 and two (2) P/N 1008487-003) as shown in Figures 1 and 2. If any spacers were required in Step VII.E.4, screw, P/N 1008487-005, will be used in place of P/N 1008487-002, and P/N 1008487-004 will be used in place of 1008487-003. Apply sealing and retaining compound, MIL-S-22473, Grade C, per ND 1002211 to threads, and torque screws to 9 ± 1 inch-pounds.
2. Three (3) plugs, P/N 1021322-002 (removed in step VII.E.2), are inserted into telescope cover protector fillet, P/N 1008496. Surfaces shall be flush.
3. Vacuum area to remove loose chips and dirt.

G. SEXTANT

1. Obtain sextant cover upper crown halves, P/N 1021320, and install using four (4) washers, P/N 1008486, and four (4) slotted head cap screws, P/N 1008487-001, apply sealing and retaining compound, MIL-S-22473, grade C. Torque screws to 9 ± 1 inch pounds.
2. Obtain four (4) plugs P/N 1021322-001, removed in step VII.E.5, and screw plugs into place so they are flush with outer surface.
3. Vacuum area to remove loose chips and dirt.

Revision B

VII. PROCEDURE (CONTINUED)

H. NAMEPLATES.

1. Transfer serial number and contract number from existing nameplate on Navigation Base and Optical Unit Assembly to new nameplate, P/N 1014650-19, supplied in retrofit kit. Imprint applicable three digit post modification dash number to pre-stamped part number, (1899950) on new identification plate as determined from section III. Use typewriter (with ribbon removed) to imprint information on new nameplate. (Height of typewriter characters should be 0.057 to 0.067 inches.)
2. Remove existing nameplate from Navigation Base and Optical Unit Assembly.
3. Clean nameplate mounting surface with MEK.
4. Apply MEK to activate adhesive on back of new nameplate. Allow activated adhesive to air dry until surface becomes tacky before performing next step.
5. Apply new nameplate to same location as occupied by old nameplate.

Sheet 15 of 25

TDRR
Revision B

VII. H. PROCEDURE (CONTINUED)

6. Transfer serial number and contract number from existing nameplate on Optical Unit Assembly to new nameplate, P/N 1012196, supplied in retrofit kit. Imprint applicable three digit post modification dash number to pre-stamped part number, (1021368) on new identification plate as determined from section III. Use typewriter (with ribbon removed) to imprint information on new nameplate. (Height of typewriter characters should be 0.057 to 0.067 inches.)
7. Remove existing nameplate from Optical Unit Assembly.
8. Clean nameplate mounting surface with MEK.
9. Abrade back nameplate, P/N 1012196, and clean with MEK. Apply epoxy adhesive, P/N 1011541, to back of nameplate.
10. Apply new nameplate to same location as occupied by old nameplate.
11. Update applicable records as directed in section VIII.
12. Dispose of removed parts in accordance with section IX.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

   e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

   f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

Sheet [illegible] of 25
Part No. 01026[illegible]
Date: 18 OCT 66
TDRR
Revision B

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.
2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.
3. Repair - If a repair; check the repair block.
4. Complete the chart as follows:
    a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.
    b. Qty. - Insert the quantity of the added and/or removed part.
    c. Part Name - Insert the name of the added and/or removed part.
    d. P/N - Insert the part number of the added and/or removed part.
    e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.
    f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

Sheet [illegible] of 25
Part No. 01026[illegible]
Date: 18 OCT 66
TDRR
Revision B

VIII. MODIFICATION DESIGNATION (CONTINUED)

    g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.
2. Make necessary entry in the Equipment Inventory Record sheet.
3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ____________ Date: ________ GAN # ________

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No.1a for each of the following levels of equipment.

MIT Reliability Date

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Stowage Unit Eyepiece. The modification is being performed to reduce the force required to close the Eyepiece Stowage Unit door and to prevent the eyepiece stowage case door from opening during earth landing shock.

II. AUTHORITY

This retrofit is authorized by ECP-ACSK-0456.
CCA-497-0354

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
Stowage Unit Eyepiece	1021255-031	1021255-051
Stowage Unit Eyepiece	1021255-041	1021255-061
Eyepiece Stowage Case	1021314-011	1021314-021

IV. PRIORITY CHANGES

RIB 0102647 (ECP 407)

V. RELATED CHANGES

Not applicable

VI. MATERIALS REQUIRED

A. One retrofit kit, P/N 8102693, consisting of the following items is required to modify the Stowage Unit Eyepiece.

Qty	Part Number	Description
1	0102663	Retrofit Instruction Bulletin
2	1021371	Stop, spring
2	1021372-002	Spring cover
4	MS24622-17	Screw, pan head
1/2 oz	1010661	Epoxy resin
1/2 oz	1010679	Adhesive activator
4	MS20426AD4-3	(1897063-203) Rivet, flat head
2	1021374	Tab, catch
4	1021314-007	Shim, hinge

VI. MATERIALS REQUIRED (CONTINUED)

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
AR	N/A	Marking India Ink
1	*Schwaab Stamp & Seal Co., type AAG-0	Rubber stamp, 1/8 inch, 13 band, alpha numerical
1	ND1002187	Bonding specification
AR	FED-TT-735	Isopropyl alcohol
AR	Dupont type TF	Cleaning agent, Freon
1	1016130-002	Shim, slide locating
AR	1011541	Adhesive, non rigid two component
1	ND1002219	Bonding specification
AR	MIL-C-5541, class 2 type 1, grade B	Alodine 12005

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and unserstand complete RIB prior to attempting this modification.

VII. A. PROCEDURE (CONTINUED)

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

3. Ink markings.

   a. Markings to be removed should be removed using isopropyl alcohol.

   b. New markings shall meet requirements of ND1002019.

4. Where marking is specified, hand marking is acceptable.

B. DETAILED INSTRUCTIONS. Perform modification as follows: (Modification to be performed at AC Electronics facilities)

1. Obtain spare eyepiece stowage case assembly, P/N 1021314-011 and place on work bench.

2. Open case cover.

3. Remove six (6) flat head screws, P/N MS21207C4-6, retaining strike catches, P/N 1021312, to case cover and retain. See figure 1.

VII. B. PROCEDURE (CONTINUED)

4. Rework strike catches per figure 2.

5. Locate and remove strike catch identification mark, "P/N 1021312" and remark with "P/N 1021376".

6. Remove excess material around strike catch mounting holes on door, to ensure screws will fully seat when strike catches are mounted.

7. Install two (2) strike catches using hardware retained in step 3, per figure 3. Apply adhesive, P/N 1010679 and 1010661, to threads of screws per ND 1002187.

8. Remove six (6) pan head screws, P/N MS24622-16, which retain two (2) clamping catches, P/N 1021262, and two (2) tension springs, P/N 1021264, to case. Dispose of tension springs per section IX. See figure 1.

9. Remove rivets retaining tab catches, P/N 1021261, to spring catches, P/N 1021260, of clamping catch assemblies. Dispose of tab catches per section IX. Retain remaining parts.

10. Obtain four (4) flat head rivets, P/N MS20426AD4-3, and two (2) tab catches, P/N 1021374, from retrofit kit.

VII. B. PROCEDURE (CONTINUED)

11. Assemble tab, P/N 1021374, catches and plate mounting tabs, P/N 1021270, to spring catch, P/N 1021260, and rivet using rivets obtained in step 10. See figure 4 for reference.

12. Locate and remove clamping catch identification number, P/N 1021262, and remark with P/N 1021375.

13. Obtain two (2) spring covers, P/N 1021372-002, and spring stops, P/N 1021371, from retrofit kit.

14. Install two (2) each, clamping catches, P/N 1021375, spring covers, P/N 1021372-002, and spring stops, P/N 1021371, using four (4) MS24622-17, pan head screws obtained from retrofit kit and two (2) pan head screws, MS24622-16, from six (6) removed in step 8. Dispose of remaining pan head screws per section IX. Assemble and install per figure 3.

15. Position spring stop, P/N 1021371, such that when the door is closed it will unlatch when only one clamping catch, P/N 1021375, is depressed at a time. A minimum of 0.003 gap must be maintained between spring stop, P/N 1021371, and cover spring, P/N 1021372-002, when door is closed*. After above adjustment has been accomplished, remove one screw at a time, apply adhesive, P/N 1010679 and 1010661, to screw threads per ND 1002187, and replace. After adhesive has been applied to all screws, recheck adjustment to ensure proper functioning of door latches.

*See figure 6 if problems occur.

VII. B. PROCEDURE (CONTINUED)

16. Locate eyepiece stowage case P/N "1021314-011". Lineout "-011" and remark with "-021".

17. Send modified eyepiece storage case, P/N 1021314-021, and remaining retrofit kit parts to field site for installation in accordance with paragraph C.

18. Update applicable records per section VIII.

19. Dispose of parts removed per section IX.

C. EYEPIECE STOWAGE UNIT, P/N 1021314-021, INSTALLATION PROCEDURE (FIELD)

1. Remove eyepiece stowage case, P/N 1021314-011, from spacecraft.

2. Locate identification plate on modified unit. Line out present dash number and serial number and rubber stamp new dash number adjacent to lined out dash number in accordance with ND 1002019 and table 1. Obtain serial number from unit removed in step 1 and mark adjacent to lined out serial number.

3. Install modified eyepiece stowage case, P/N 1021314-021, in spacecraft and dispose of eyepiece stowage case removed from spacecraft in accordance with section IX.

VII. C. PROCEDURE (CONTINUED)

4 8. Measure the distance between the clamping catch, P/N 1021375, of eyepiece stowage case and the annunciator panel and support assembly, P/N 1021272, when the clamping catch is disengaged. (See figure 5.) The gap shall be between 0.050 to 0.060. If the gap is not between 0.050 to 0.060, remove case from spacecraft and either shim door hinge, P/N 1021265, or case hinge P/N 1021265, as required using hinge shims, P/N 1021314-007, as required to obtain 0.050 to 0.060 tolerance. Removing one screw at a time, apply adhesive, P/N 1010679 and 1010661, to all threads of hinge screws, P/N MS24622-16, per ND 1002187. Torque button head screws, P/N 1010618-15, of hinges to 5 to 6 inch pounds.

5 5. Update applicable records per section VIII.

6 6. Dispose of parts removed per section IX.

Table 1. Identification Plate Information

Name	Pre-modification P/N	Post-modification P/N
Stowage Unit Eyepiece (G & N System 12)	1021255-031	1021255-051

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

VIII. MODIFICATION DESIGNATION (CONTINUED)

E. The following part number changes resulted from this modification.

Name	Pre-modification P/N	Post-modification P/N
Eyepiece Stowage Unit (Inseparable Assembly)	1021314-011	1021314-021
Clamping Catch Assembly	1021262	1021375
Strike Catch	1021312	1021376
Stowage Unit Eyepiece	1021255-041	1021255-061
Stowage Unit Eyepiece	1021255-031	1021255-051

IX. DISPOSITION OF PARTS REMOVED

Return Eyepiece Stowage Unit, P/N 1021314-011, (removed from spacecraft) to AC Electronics Logistics Department bondroom.

Scrap all other removed parts via AC Electronics form MIL-127 or equivalent.

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ____________ Date: ________ G&N # ______

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No. 1a for each of the following levels of equipment.

BLACK BOXES, REPARABLE SUB-ASSEMBLIES

Revision B

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the G & N Indicator Control Panel Assembly. This modification is being performed to provide a suitable cover over the exposed switch mechanisms which will serve to inhibit the possible introduction of any loose particles of significant size.

II. AUTHORITY

This retrofit is authorized by ECP-ACSK-0457. (CCA-0497-355)

III. UNITS AFFECTED

Name	Pre-modification P/N	Post-modification P/N
G & N Indicator Control Panel Assembly (G&N systems 203 through 207 and spares)	2014578-011	2014578-021
Reticle Brightness Control Assembly (Spares)	2014656-011	2014656-021

Revision B

IV. PRIORITY CHANGES

Not applicable.

V. RELATED CHANGES

Not applicable.

VI. MATERIALS REQUIRED

A. One retrofit kit, P/N 8102694, consisting of the following items is required for this modification;

Qty	Part Number	Description
1	0102664	Retrofit Instruction Bulletin
3	2021238-001	Cover, switch
2	2021238-002	Cover, switch
1	2021238-003	Cover, switch
1	2021238-004	Cover, switch
2	2021238-005	Cover, switch
2	2021238-006	Cover, switch
1	2021239	Shield, switch, attitude impulse
1	2021240	Cover, shield
1	2021241	Spacer, cover
1	2021242	Cover, Reticle brightness
4	1010477-13	Screw, flat head, 100°, selflocking

Sheet 4 of 22
Part No. 0102664
Date: 30 SEPT 66
TDRR
Revision B

VI. A. MATERIALS REQUIRED (CONTINUED)

Qty	Part Number	Description
4	NAS1352C02-4	Screw, Soc. Hd. Cap
4	1010617-2	Nut, Hex
2	MS35233-9	Screw, pan head, slotted
1	1004260-545	Nameplate

B. One retrofit kit, P/N 8102695, consisting of the following items is required to modify Reticle Brightness Control Assembly, P/N 2014656-011 (spares).

Qty	Part Number	Description
1	0102664	Retrofit Instruction Bulletin
1	2021242	Cover, reticle brightness
1	2021241	Spacer, cover
2	MS35233-9	Screw, pan head slotted

C. Materials and special tools required but not supplied in kit are as follows;

Qty	Part Number	Description
1	ND1002219	Process specification for bonding with a non-rigid epoxy adhesive
AR	MIL-T-23594 Type II	Teflon Tape
AR	N/A	Marking India ink
AR	1001861	Nylon gloves
AR	N/A	Lint free tissue
AR	Dupont type TF	Cleaning agent, Freon
AR	FED-TT-735	Isopropyl alcohol
AR	1011541	Adhesive, non rigid, two component
1	2014578	Drawing

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.
2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.
3. New markings shall meet requirements of ND 1002019.
4. Where marking is specified, hand marking is acceptable.

B. PERFORM MODIFICATION TO G & N INDICATOR CONTROL PANEL ASSEMBLY, P/N 2014578-011 IN ACCORDANCE WITH PARAGRAPH C. PERFORM MODIFICATION TO RETICLE BRIGHTNESS CONTROL ASSEMBLY, P/N 2014656-011, (SPARES), IN ACCORDANCE WITH PARAGRAPH D.

C. G & N INDICATOR CONTROL PANEL ASSEMBLY, P/N 2014578-011. Obtain retrofit kit, P/N 8102694, and perform modification as follows:

NOTE: Do not damage wiring during modification.

VII. C. PROCEDURE (CONTINUED)

1. Remove right handle assembly, P/N 2014764-011, from panel, G & N Indicator Control (Inseparable) (Panel), P/N 2014626, and retain.

   NOTE: When removing and installing MARK pushbutton cap, P/N 1010457-1, take care not to damage MARK and MARK REJECT panel.

2. Remove MARK pushbutton cap, P/N 1010457-1.
3. Remove four (4) hex flat head screws, P/N 1010630-4, nuts, P/N 1010617-2, and washers, P/N 6014527, retaining MARK and MARK REJECT panel to switch support, P/N 2014658, and retain.
4. Remove mounting hardware and panel spacers, P/N 2014763, from MARK, (S6), P/N 1010904-2, and MARK REJECT (S7), P/N 1010904-1, switches and retain.
5. Remove MARK and MARK REJECT panel and retain.
6. Carefully move electroluminescent (EL) lamp until four (4) flat head selflocking screws, P/N 1010477-12, retaining attitude impulse switch (S8), P/N 2014700-011, can be removed. Remove screws and dispose per section IX.
7. Obtain attitude impulse shield, P/N 2021239, and four (4) flat head selflocking screws, P/N 1010477-13, from kit.

VII. C. PROCEDURE (CONTINUED)

8. Install attitude impulse shield, P/N 2021239, on attitude impulse switch (S8), P/N 2014700-011, and install switch and shield to switch support, P/N 2014658, using four (4) flat head selflocking screws, P/N 1010477-13 obtained in step 7. Remount switch S8 in original position.

8a. Obtain Teflon Tape, MIL-T-23594, Type II, and wrap the Peripery of the Attitude Impulse Shield, P/N 2021239, (installed in step 8) to cover the exposed slots.

9. Carefully reposition EL lamp to original position and install MARK and MARK REJECT panel removed in step 5, using hardware removed in step 3. Do not tighten hardware at this time.
10. Obtain two (2) switch covers, P/N 2021238-002, from kit.
11. Remove keying washers from MARK (S6) and MARK REJECT (S7) switches and install covers obtained in step 10 on switches.

    NOTE: During switch installation, the EL lamp and MARK REJECT panel should be positioned properly to ensure that the EL lamp is not pinched by the switch mounting hardware.

12. Reinstall MARK (S6) and MARK REJECT (S7) switches onto switch support, P/N 2014658, using mounting hardware and panel spacers removed in step 4. Torque switches to 48 inch pounds. See drawing 2014578, detail B-B for switch installation.

VII. C. PROCEDURE (CONTINUED)

13. Tighten mounting hardware installed in step 9 to requirements of drawing 2014578, detail A-A.
14. Obtain shield cover, P/N 2021240, four (4) socket head cap screws, P/N NAS1352C02-4, and four (4) hex nuts, P/N 1010617-2 from kit. Install shield cover, P/N 2021240, onto attitude impulse switch shield, P/N 2021239, and secure using four (4) socket head cap screws, P/N NAS1352C02-4 and hex nuts, P/N 1010617-2.
15. Reinstall MARK pushbutton cap, P/N 1010457-1, removed in step 2.
16. Reinstall handle assembly, P/N 2014764-011, removed in step 1.

    NOTE: Torque the following bushing mounted switches to 48 inch pounds.

17. Remove mounting hardware from UP TELEMETRY switch (S10), P/N 1010905-3, and retain.
18. Obtain switch cover, P/N 2021238-001, from kit, remove switch S10 from panel, P/N 2014626 and install switch cover on switch.
19. Reinstall switch (S10) P/N 1010905-3 in original position on panel, P/N 2014626, using mounting hardware retained in step 17 and torque.

VII. C. PROCEDURE (CONTINUED)

20. Remove mounting hardware from CONDITION LAMPS (S12) switch, P/N 1010903-8, and retain.

21. Obtain one (1) each switch cover, P/N 2021238-005 and P/N 2021238-006, from kit.

22. Install switch cover, P/N 2021238-006 over CONDITION LAMPS (S12) switch.

NOTE: If required, prior to performing step 23, cut material from switch cover, P/N 2021238-005, until it fits properly over EL lamp (DS2) wiring.

23. Install CONDITION LAMPS (S12) switch and switch cover, P/N 2021238-006, into switch cover, P/N 2021238-005.

24. Reinstall CONDITION LAMPS (S12) switch and switch covers in original position on panel, P/N 2014626, using hardware retained in step 20 and torque.

25. Remove mounting hardware from COUPLING switch (S4), P/N 1010905-5, and retain.

26. Obtain switch cover, P/N 2021238-001 from kit, remove COUPLING switch (S4) from panel, P/N 2014626, and install switch cover on switch (S4).

27. Reinstall COUPLING switch (S4) in original position on panel, P/N 2014626, using mounting hardware retained in step 25 and torque.

VII. C. PROCEDURE (CONTINUED)

28. Remove mounting hardware from SPEED switch (S1), P/N 1010902-6, and retain.

29. Obtain switch cover, P/N 2021238-004, from kit. Remove SPEED switch (S1) from panel, P/N 2014626, and install switch cover on switch.

30. Reinstall SPEED switch (S1) in original position on panel, P/N 2014626, using mounting hardware retained in step 28 and torque.

31. Remove mounting hardware from MODE switch (S3), P/N 1010903-9, and retain.

32. Obtain one (1) each switch cover, P/N 2021238-005, and P/N 2021238-006, from kit.

33. Remove MODE switch (S3) from panel, P/N 2014626, and install switch cover, P/N 2021238-006, over MODE switch (S3).

NOTE: If required, prior to performing step 34, cut material from switch cover P/N 2021238-005, until it fits properly over EL lamp (DS14) wiring.

34. Install MODE switch (S3) and switch cover, P/N 2021238-006, into switch cover, P/N 2021238-005.

35. Reinstall MODE switch (S3) and switch covers in original position on panel, P/N 2014626, using hardware retained in step 31 and torque.

VII. C. PROCEDURE (CONTINUED)

36. Remove mounting hardware from TELESCOPE TRUNNION switch (S5), P/N 1010902-4, and retain.

37. Obtain switch cover, P/N 2021238-001 from kit. Remove TELESCOPE TRUNNION switch (S5) from panel, P/N 2014626, and install switch cover on switch.

38. Reinstall TELESCOPE TRUNNION switch (S5) in original position on panel, P/N 2014626, using mounting hardware retained in step 36 and torque.

39. Remove two (2) allen head screws, P/N NAS1352C02LL3, from front of TRACKER switch (S2), P/N 1010902-5, and remove switch blockout plate, P/N 2021201, and switch blockout bushing, P/N 2021200, and retain.

40. Remove mounting hardware from TRACKER switch (S2) and retain.

41. Obtain switch cover, P/N 2021238-003, from kit. Remove TRACKER switch (S2) from panel, P/N 2014626, and install switch cover on switch.

42. Reinstall TRACKER switch (S2), in original position on panel, P/N 2014626, using mounting hardware retained in step 40 and torque.

43. Reinstall switch blockout hardware removed in step 39 per note 11 of drawing 2014578.

VII. C. PROCEDURE (CONTINUED)

44. Remove cable clamp on reticle brightness control assembly, P/N 2014656-011, and retain.

45. Remove two (2) mounting socket head cap screws, P/N 1001489-2, from reticle brightness control assembly, P/N 2014656-011, and retain.

46. Locate reticle brightness control assembly identification number 2014656-011. Remove "-011" and replace with "-021" in accordance with ND 1002019.

47. Remove two (2) pan head slotted screws, P/N MS35233-7, which retain switch (S11), P/N 1010901-1, to mounting bracket, P/N 2014638. Retain flat washers and dispose of pan head slotted screws per section IX.

48. Obtain reticle brightness cover, P/N 2021242, cover spacer, P/N 2021241, and two (2) pan head slotted screws, P/N MS35233-9, from kit.

49. Retaining switch (S11), P/N 1010901-1, and actuator, P/N 1010457-5, in original position, install reticle brightness cover, P/N 2021242 and cover spacer, P/N 2021241, over switch actuating mechanism using two (2) pan head slotted screws, P/N MS35233-9, obtained in step 48, and flat washers retained in step 47.

VII. C. PROCEDURE (CONTINUED)

50. Reinstall reticle brightness control assembly, P/N 2014656-021, using hardware retained in step 45.

51. Reinstall cable clamp removed and retained in step 44.

52. Obtain nameplate, P/N 1004260-545, from kit.

53. Transfer serial number from existing nameplate on panel, P/N 2014626, to new nameplate. Use typewriter with ribbon removed to imprint data. (Height of typewriter characters shall be 0.057 to 0.067 inches.)

54. Clean old nameplate using isopropyl alcohol and freon.

CAUTION: The epoxy adhesive contains ingredients which are capable of producing skin irretations, skin and eye burns, sensitization and dermatitis. Avoid skin contact with either of the two components. If skin contact occurs, remove adhesive with ispropyl alcohol and freon or rubbing alcohol followed by a thorough washing of the affected skin. Prevent contact with eyes or clothing and avoid ingestion and inhalation of fumes. Remove contaminated clothing and wash before reuse. When preparing the adhesive, the use of disposable plastic gloves is required. The adhesive shall be prepared in a well ventilated area, preferably under an exhaust hood.

VII. C. PROCEDURE (CONTINUED)

55. Obtain epoxy adhesive, P/N 1011541, and apply to new nameplate in accordance with ND 1002219, method II.

56. Install new nameplate over old nameplate. Wipe excess adhesive from nameplate using lint free tissue.

57. Cure adhesive at room temperature for a minimum of 24 hours. See ND 1002219, method II for reference.

58. Update applicable records as directed in section VIII.

59. Dispose of removed parts per section IX.

D. RETICLE BRIGHTNESS CONTROL ASSEMBLY, P/N 2014656-011, (SPARES). Obtain retrofit kit, P/N 8102695, and perform modification as follows:

1. Obtain reticle brightness control assembly, P/N 2014656-011, from spares.

2. Locate reticle brightness control assembly identification number 2014656-011. Remove "-011" and remark with "-021" in accordance with ND 1002019.

D.
VII. C. PROCEDURE (CONTINUED)

3. Remove two (2) pan head slotted screws, P/N MS35233-7, which retain switch (S11) P/N 1010901-1, to mounting bracket, P/N 2014638. Retain flat washers and dispose of pan head slotted screws per section IX.

4. Retaining switch (S11), P/N 1010901-1, and actuator, P/N 1010457-5, in original position, install reticle brightness cover, P/N 2021242, and cover spacer, P/N 2021242, over switch actuating mechanism using two (2) pan head slotted screws, P/N MS35233-9, contained in kit, and flat washers retained in step 3.

5. Update applicable records as directed in section VIII.

6. Dispose of removed parts per section IX.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

    a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

    b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

    c. Equip. S/N - List the serial number for each assembly listed in the first column.

Sheet 17 of 22
Part No. 0102664
Date: 30 SEPT 66
TDRR
Revision B

VIII. MODIFICATION DESIGNATION (CONTINUED)

d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

Sheet 18 of 22
Part No. 0102664
Date: 30 SEPT 66
TDRR
Revision B

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

Revision A

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Optical Unit and Bellows Assembly. This modification is being performed to add the Cover and Baffle Assembly, P/N 1008490-011 (SCT) and Cover and Baffle Assembly, P/N 1008480-011 (SXT) part of astrosextant passive thermal protective system to prevent thermal damage to the optics and bellows on reentry.

II. AUTHORITY

This Retrofit is authorized by CCA497-0309, in lieu of approval of ECP 0428.

III. UNITS AFFECTED

G & N System	Name	Pre-modification P/N	Post-modification P/N
204 & 205	Optical Unit and Bellows Assembly	2010790-021	2010790-061
206	Optical Unit and Bellows Assembly	2010790-031	2010790-071
207, 208 & 209	Optical Unit and Bellows Assembly	2010790-041	2010790-081

V. RELATED CHANGES

RIB'S 0102674 and 0102675

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102704, consisting of the following items is required to modify the Navigation Base and Optical Unit Assembly.

Qty	Part Number	Description
1	0102673	Retrofit Instruction Bulletin
1	1008490-011	Cover and Baffle Telescope (Insep Assy)
1	1008480-011	Cover and Baffle Sextant (Insep Assy)
1	1008495	Seat, Telescope
4	1008494	Screw, Flat Head
4	1008484-000	Screw, captive
2	1021379	Fastener, screw tube, flat hd
1	1021383	Clamp, sextant cover
6	1008484-001	Screw, captive
1	1021340	Potting ring, telescope
1	1021382	Seat, sextant cover
1 qt	1008903-1	Epoxy Resin) EPON 954
1 pt	1008903-2	Curing Agent) EPON 954

Sheet 4 of
Part No. 0102673
Date: 8 DEC 66
TDRR
Revision A

VI. MATERIALS REQUIRED (CONTINUED)

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
AR	TT-M-261	Methyl-Ethyl-Ketone (MEK)
AR	FED-TT-I-735	Isopropyl alcohol
AR	DuPont Type TF	Freon
AR	N/A	Adhesive (MIL-S-22473, grade C) seating and retaining compound
1	ND1002329-001	Process specification for bonding with 1008903 adhesive (EPON 954)
AR	N/A	Surface Primer (MIL-S-22473, Grade N, Form R)
AR	N/A	Marking India Ink
1	*Schwaab Stamp & Seal Co., Type AAG-0	Rubber stamp, 1/8 inch, 13 band, alpha numerical

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

B. DETAILED INSTRUCTIONS. Obtain Retrofit Kit, P/N 8102704, and perform modifications to telescope head, in accordance with paragraph C, and sextant head, in accordance with paragraph D.

C. TELESCOPE HEAD.

1. Remove existing cover, P/N 2012547, and associated hardware from telescope head and dispose as per direction given in section IX.

VII. C. PROCEDURE (CONTINUED)

2. Obtain telescope cover seat, P/N 1008495, and cover and baffle, P/N 1008490-011, install four (4) captive screws, P/N 1008484-000, into telescope cover and baffle assembly. Assemble seat and cover to telescope head. Orient assembly so telescope scans 45° off the optics center line in direction of worm shaft bearing retaining cap, P/N 2011186, and seat the assembly on the telescope prism mount support, P/N 2011185-000 or 011 for a fit check. Check for proper seating of assembly, proper clearance of optics, and mounting screw hole alignment.

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

NOTE: Do not clean painted surfaces with MEK.

NOTE: When loosening four (4) captive screws, P/N 1008484-000, loosen no more than 2 turns per screw, alternately until loose.

3. Remove telescope cover seat from cover assembly and clean telescope cover seat with MEK. Rinse with isopropyl alcohol and freon.

4. Install telescope potting ring, P/N 1021340, between telescope head seating surface and telescope cover seat, P/N 1008495, See figure 1.

VII. C. PROCEDURE (CONTINUED)

5. Assemble telescope cover and baffle, P/N 1008490-011, to telescope cover seat, P/N 1008495. Align the four (4) holes of cover and baffle with holes in telescope cover seat and attach with four (4) captive screws, P/N 1008484-000. Torque screws 5 to 6 inch pounds.

6. Obtain adhesive, P/N 1008903, (hereafter referred to as EPON 954) and prepare in accordance with ND 1002329-001.

7. Apply a narrow band of adhesive EPON 954 to telescope cover seat. (See figure 3.)

8. Clean adhesive from all surfaces not to be bonded. Install telescope cover seat making certain alignment repeats trial fit orientation.

NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473 Grade N. Form R, and allow to dry.

9. Apply adhesive, MIL-S-22473, grade C PER ND 1002211 to threads of flat head screws, P/N 1008494. Insert screws through cover and baffle, P/N 1008490-011 and torque assembly to telescope head 4 ± 1 inch pounds. Ensure assembly is fully seated to telescope before torquing screws. Check for proper clearance of optics and telescope cover.

VII. C. PROCEDURE (CONTINUED)

NOTE: Rotate telescope by hand every 15 minutes for 1 hour.

10. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

D. SEXTANT HEAD.

1. Remove existing cover, P/N 2012675, from sextant head. Do NOT remove the two (2) 6 inch long threaded studs, P/N 2011603. Discard slotted nuts, P/N 2011602, and cover, P/N 2012675, in accordance with section IX.

CAUTION: Avoid any damage to flex print circuit board.

NOTE: If any interference problems are encountered, reorient flex print to provide clearance.

2. Trial fit sextant cover seat, P/N 1021382, to sextant head. Check for proper seating to sextant head.

3. Rotate sextant so that sextant flex print circuit board junction is in lowest position.

VII. D. PROCEDURE (CONTINUED)

CAUTION: Move mirror by using top of mirror and move it very slowly from stop to stop. Do NOT touch mirror surface.

NOTE: Ensure assembly does not bind with flex print during or after installation.

4. Assemble clamp, P/N 1021383, to seat, P/N 1021382, and align tapped holes in clamp with grooves on circumference of seat. Install 6 captive screws, P/N 1008484-001, into cover and baffle assembly, P/N 1008480-011. Do not turn the threaded portion of the screws completely through the tapped holes, but leave approximately one thread engaged to hold screws in alignment. Temporarily attach cover and baffle assembly to seat, P/N 1021383, and clamp, P/N 1021382, using the 6 captive screws (1008484-001) and two screw tube fasteners, P/N 1021379, to long studs. Check clearance between sextant mirror and sextant cover and baffle assembly, P/N 1008480-011. Carefully move mirror from stop to stop and check clearance on each side. Rotate cover and baffle assembly to provide approximately 1/8 inch clearance between mirror, mirror mount, and mirror bracket.

5. Remove sextant cover seat, clamp and sextant cover and baffle assembly. (Separate cover seat and clamp from cover and baffle assembly.) Leave six (6) captive screws, P/N 1008484-001, captivated in sextant cover and baffle assembly, P/N 1008480-011, but back screws out about one turn so that approximately one (1) thread is engaged thus holding screws in alignment.

VII. D. PROCEDURE (CONTINUED)

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

CAUTION: Do not apply MEK to painted surfaces.

6. Clean sextant cover seat with MEK. Rinse with isopropyl alcohol and freon.

7. Apply a narrow band of adhesive EPON 954 to sextant cover seat, P/N 1021382, see figure 3. Remove any excess adhesive. Clean adhesive from all surfaces not to be bonded.

8. Carefully install sextant cover seat, P/N 1021382, over flex print circuit board and seat properly to sextant housing, orient to location obtained during trial fit (step 2). Assemble clamp, P/N 1021383, to seat and align tapped holes in clamp with grooves on circumference of seat.

9. Lower sextant cover and baffle assembly onto sextant cover clamp and seat. Align holes and secure assembly to clamp and seat with six (6) captive screws, P/N 1008484-001. Torque 5 to 6 inch pounds. Check clearance as described in paragraph (4).

VII. D. PROCEDURE (CONTINUED)

NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473 Grade N, Form R, and allow to dry.

10. Apply adhesive, MIL-S-22473, grade C PER ND 1002211 to threads of two (2) screw tube fasteners, P/N 102137 and torque to 4 ± 1 inch pounds. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

11. Remove potting ring, P/N 1021340, from telescope. Remove potting ring by pulling attached strings until ring splits apart. After ring splits, pull away from telescope assembly and dispose of potting ring in accordance with section IX.

12. Locate P/N 2010790 on Optical Unit and Bellows Assembly. Remove dash number and replace with new dash number in accordance with section III, Units Affected.

13. Update applicable records as directed in section VIII.

14. Dispose of removed parts in accordance with section IX.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

   e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

   f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

VIII. MODIFICATION DESIGNATION (CONTINUED)

E. Significant part number changes resulting from this modification are as listed in section III.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

ACC Form No. 1
2/23/66

RETROFIT OR REPAIR COMPLIANCE REPORT

V. RELATED CHANGES

RIB'S 0102674 and 0102675

VI. MATERIALS REQUIRED

A. One Retrofit Kit, P/N 8102704, consisting of the following items is required to modify the Navigation Base and Optical Unit Assembly.

Qty	Part Number	Description
1	0102673	Retrofit Instruction Bulletin
1	1008490-021	Cover and Baffle Telescope (Insep Assy)
1	1008480-011	Cover and Baffle Sextant (Insep Assy)
1	1008495	Seat, Telescope
4	1008494	Screw, Flat Head
4	1008484-000	Screw, captive
2	1021379	Fastener, screw tube, flat hd
1	1021383	Clamp, sextant cover
6	1008484-001	Screw, captive
1	1021340	Potting ring, telescope
1	1021382	Seat, sextant cover
1 qt	1008903-1	Epoxy Resin) EPON 954
1 pt	1008903-2	Curing Agent)

VI. MATERIALS REQUIRED (CONTINUED)

B. Materials and special tools required but not supplied in kit are as follows:

Qty	Part Number	Description
AR	TT-M-261	Methyl-Ethyl-Ketone (MEK)
AR	FED-TT-I-735	Isopropyl alcohol
AR	DuPont Type TF	Freon
AR	N/A	Adhesive (MIL-S-22473, grade C) seating and retaining compound
1	ND1002329-001	Process specification for bonding with 1008903 adhesive (EPON 954)
AR	N/A	Surface Primer (MIL-S-22473, Grade N, Form R)
AR	N/A	Marking India Ink
1	*Schwaab Stamp & Seal Co., Type AAG-0	Rubber stamp, 1/8 inch, 13 band, alpha numerical

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

B. DETAILED INSTRUCTIONS. Obtain Retrofit Kit, P/N 8102704, and perform modifications to telescope head, in accordance with paragraph C, and sextant head, in accordance with paragraph D.

C. TELESCOPE HEAD.

1. Remove existing cover, P/N 2012547, and associated hardware from telescope head and dispose as per direction given in section IX.

VII. C. PROCEDURE (CONTINUED)

2. Obtain telescope cover seat, P/N 1008495, and cover and baffle, P/N 1008490-021, install four (4) captive screws, P/N 1008484-000, into telescope cover and baffle assembly. Assemble seat and cover to telescope head. Orient assembly so telescope scans 45° off the optics center line in direction of worm shaft bearing retaining cap, P/N 2011186, and seat the assembly on the telescope prism mount support, P/N 2011185-000 or 011 for a fit check. Check for proper seating of assembly, proper clearance of optics, and mounting screw hole alignment.

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

NOTE: Do not clean painted surfaces with MEK.

NOTE: When loosening four (4) captive screws, P/N 1008484-000, loosen no more than 2 turns per screw, alternately until loose.

3. Remove telescope cover seat from cover assembly and clean telescope cover seat with MEK. Rinse with isopropyl alcohol and freon.

4. Install telescope potting ring, P/N 1021340, between telescope head seating surface and telescope cover seat, P/N 1008495, See figure 1.

VII. C. PROCEDURE (CONTINUED)

5. Assemble telescope cover and baffle, P/N 1008490-021, to telescope cover seat, P/N 1008495. Align the four (4) holes of cover and baffle with holes in telescope cover seat and attach with four (4) captive screws, P/N 1008484-000. Torque screws 5 to 6 inch pounds.

6. Obtain adhesive, P/N 1008903, (hereafter referred to as EPON 954) and prepare in accordance with ND 1002329-001.

7. Apply a narrow band of adhesive EPON 954 to telescope cover seat. (See figure 3.)

8. Clean adhesive from all surfaces not to be bonded. Install telescope cover seat making certain alignment repeats trial fit orientation.

NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473 Grade N. Form R, and allow to dry.

9. Apply adhesive, MIL-S-22473, grade C PER ND 1002211 to threads of flat head screws, P/N 1008494. Insert screws through cover and baffle, P/N 1008490-021 and torque assembly to telescope head 4 ± 1 inch pounds. Ensure assembly is fully seated to telescope before torquing screws. Check for proper clearance of optics and telescope cover.

VII. C. PROCEDURE (CONTINUED)

NOTE: Rotate telescope by hand every 15 minutes for 1 hour.

10. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

D. SEXTANT HEAD.

1. Remove existing cover, P/N 2012675, from sextant head. Do NOT remove the two (2) 6 inch long threaded studs, P/N 2011603. Discard slotted nuts, P/N 2011602, and cover, P/N 2012675, in accordance with section IX.

CAUTION: Avoid any damage to flex print circuit board.

NOTE: If any interference problems are encountered, reorient flex print to provide clearance.

2. Trial fit sextant cover seat, P/N 1021382, to sextant head. Check for proper seating to sextant head.

3. Rotate sextant so that sextant flex print circuit board junction is in lowest position.

VII. D. PROCEDURE (CONTINUED)

CAUTION: Move mirror by using top of mirror and move it very slowly from stop to stop. Do NOT touch mirror surface.

NOTE: Ensure assembly does not bind with flex print during or after installation.

4. Assemble clamp, P/N 1021383, to seat, P/N 1021382, and align tapped holes in clamp with grooves on circumference of seat. Install 6 captive screws, P/N 1008484-001, into cover and baffle assembly, P/N 1008480-011. Do not turn the threaded portion of the screws completely through the tapped holes, but leave approximately one thread engaged to hold screws in alignment. Temporarily attach cover and baffle assembly to seat, P/N 1021383, and clamp, P/N 1021382, using the 6 captive screws (1008484-001) and two screw tube fasteners, P/N 1021379, to long studs. Check clearance between sextant mirror and sextant cover and baffle assembly, P/N 1008480-011. Carefully move mirror from stop to stop and check clearance on each side. Rotate cover and baffle assembly to provide approximately 1/8 inch clearance between mirror, mirror mount, and mirror bracket.

5. Remove sextant cover seat, clamp and sextant cover and baffle assembly. (Separate cover seat and clamp from cover and baffle assembly.) Leave six (6) captive screws, P/N 1008484-001, captivated in sextant cover and baffle assembly, P/N 1008480-011, but back screws out about one turn so that approximately one (1) thread is engaged thus holding screws in alignment.

VII. D. PROCEDURE (CONTINUED)

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

CAUTION: Do not apply MEK to painted surfaces.

6. Clean sextant cover seat with MEK. Rinse with isopropyl alcohol and freon.

7. Apply a narrow band of adhesive EPON 954 to sextant cover seat, P/N 1021382, see figure 3. Remove any excess adhesive. Clean adhesive from all surfaces not to be bonded.

8. Carefully install sextant cover seat, P/N 1021382, over flex print circuit board and seat properly to sextant housing, orient to location obtained during trial fit (step 2). Assemble clamp, P/N 1021383, to seat and align tapped holes in clamp with grooves on circumference of seat.

9. Lower sextant cover and baffle assembly onto sextant cover clamp and seat. Align holes and secure assembly to clamp and seat with six (6) captive screws, P/N 1008484-001. Torque 5 to 6 inch pounds. Check clearance as described in paragraph (4).

VII. D. PROCEDURE (CONTINUED)

NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473 Grade N, Form R, and allow to dry.

10. Apply adhesive, MIL-S-22473, grade C PER MD 1002211 to threads of two (2) screw tube fasteners, P/N 1021379, and torque to 4 ± 1 inch pounds. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

11. Remove potting ring, P/N 1021340, from telescope. Remove potting ring by pulling attached strings until ring splits apart. After ring splits, pull away from telescope assembly and dispose of potting ring in accordance with section IX.

12. Locate P/N 2010790 on Optical Unit and Bellows Assembly. Remove dash number and replace with new dash number in accordance with section III, Units Affected.

13. Update applicable records as directed in section VIII.

14. Dispose of removed parts in accordance with section IX.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

   e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

   f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

VIII. MODIFICATION DESIGNATION (CONTINUED)

E. Significant part number changes resulting from this modification are as listed in section III.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

ACC Form No. 1
2/23/66

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ______________ Date: ________ OAN # ________

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No. 1a for each of the following levels of equipment.

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) is to provide instructions for the modification of the Optical Unit and Bellows Assembly. This modification is being performed to add the Cover and Baffle Assembly, P/N 1008490-021 (SCT) and Cover and Baffle Assembly, P/N 1008480-011 (SXT) part of astrosextant passive thermal protective system to prevent thermal damage to the optics and bellows on reentry.

II. AUTHORITY

This Retrofit is authorized by CCA497-0309, in lieu of approval of ECP 0428.

III. UNITS AFFECTED

G & N System	Name	Pre-modification P/N	Post-modification P/N
204 & 205	Optical Unit and Bellows Assembly	2010790-021	2010790-061
206	Optical Unit and Bellows Assembly	2010790-031	2010790-071
207, 208 & 209	Optical Unit and Bellows Assembly	2010790-041	2010790-081

AR	N/A	Trichloroethylene

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

B. DETAILED INSTRUCTIONS.

Obtain Retrofit Kit, P/N 8102704, and perform modifications to telescope head, in accordance with paragraph C, and sextant head, in accordance with paragraph D.

C. TELESCOPE HEAD.

1. Remove existing cover, P/N 2012547, and associated hardware from telescope head and dispose as per direction given in section IX.

VII. C. PROCEDURE (CONTINUED)

2. Obtain telescope cover seat, P/N 1008495, and cover and baffle, P/N 1008490-021, install four (4) captive screws, P/N 1008484-000, into telescope cover and baffle assembly. Assemble seat and cover to telescope head. Orient assembly so telescope scans 45° off the optics center line in direction of worm shaft bearing retaining cap, P/N 2011186, and seat the assembly on the telescope prism mount support, P/N 2011185-000 or 011 for a fit check. Check for proper seating of assembly, proper clearance of optics, and mounting screw hole alignment.

   WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

   NOTE: Do not clean painted surfaces with MEK.

   NOTE: When loosening four (4) captive screws, P/N 1008484-000, loosen no more than 2 turns per screw, alternately until loose.

3. Remove telescope cover seat from cover assembly and clean telescope cover seat with MEK. Rinse with isopropyl alcohol and freon.

4. Install telescope potting ring, P/N 1021340, between telescope head seating surface and telescope cover seat, P/N 1008495. See figure 1.

VII. C. PROCEDURE (CONTINUED)

5. Assemble telescope cover and baffle, P/N 1008490-021, to telescope cover seat, P/N 1008495. Align the four (4) holes of cover and baffle with holes in telescope cover seat and attach with four (4) captive screws, P/N 1008484-000. Torque screws 5 to 6 inch pounds.

6. Obtain adhesive, P/N 1008903, (hereafter referred to as EPON 954) and prepare in accordance with ND 1002329-001.

7. Apply a narrow band of adhesive EPON 954 to telescope cover seat. (See figure 3.)

8. Clean adhesive from all surfaces not to be bonded. Install telescope cover seat making certain alignment repeats trial fit orientation.

   NOTE: Before applying adhesive, per MIL-S-22473, [illegible] clean parts in Trichloroethylene, then Freon, air dry, and apply surface primer, MIL-S-22473 Grade N, Form R, and allow to dry.

9. Apply adhesive, MIL-S-22473, grade C per ND 1002211 to threads of flat head screws, P/N 1008494. Insert screws through cover and baffle, P/N 1008490-021 and torque assembly to telescope head 4 ± 1 inch pounds. Ensure assembly is fully seated to telescope before torquing screws. Check for proper clearance of optics and telescope cover.

VII. C. PROCEDURE (CONTINUED)

NOTE: Rotate telescope by hand every 15 minutes for 1 hour.

10. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

D. SEXTANT HEAD.

1. Remove existing cover, P/N 2012675, from sextant head. Do NOT remove the two (2) 6 inch long threaded studs, P/N 2011603. Discard slotted nuts, P/N 2011602, and cover, P/N 2012675, in accordance with section IX.

   CAUTION: Avoid any damage to flex print circuit board.

   NOTE: If any interference problems are encountered, reorient flex print to provide clearance.

2. Trial fit sextant cover seat, P/N 1021382, to sextant head. Check for proper seating to sextant head.

3. Rotate sextant so that sextant flex print circuit board junction is in lowest position.

VII. D. PROCEDURE (CONTINUED)

CAUTION: Move mirror by using top of mirror and move it very slowly from stop to stop. Do NOT touch mirror surface.

NOTE: Ensure assembly does not bind with flex print during or after installation.

4. Assemble clamp, P/N 1021383, to seat, P/N 1021382, and align tapped holes in clamp with grooves on circumference of seat. Install 6 captive screws, P/N 1008484-001, into cover and baffle assembly, P/N 1008480-011. Do not turn the threaded portion of the screws completely through the tapped holes, but leave approximately one thread engaged to hold screws in alignment. Temporarily attach cover and baffle assembly to seat, P/N 1021383, and clamp, P/N 1021382, using the 6 captive screws (1008484-001) and two screw tube fasteners, P/N 1021379, to long studs. Check clearance between sextant mirror and sextant cover and baffle assembly, P/N 1008480-011. Carefully move mirror from stop to stop and check clearance on each side. Rotate cover and baffle assembly to provide approximately 1/8 inch clearance between mirror, mirror mount, and mirror bracket.

5. Remove sextant cover seat, clamp and sextant cover and baffle assembly. (Separate cover seat and clamp from cover and baffle assembly.) Leave six (6) captive screws, P/N 1008484-001, captivated in sextant cover and baffle assembly, P/N 1008480-011, but back screws out about one turn so that approximately one (1) thread is engaged thus holding screws in alignment.

VII. D. PROCEDURE (CONTINUED)

WARNING: Methyl-Ethyl-Ketone (MEK) is toxic and inflammable. When using this solvent, provide adequate ventilation, avoid inhalation of fumes, do not allow solvent to contact skin, and do not expose solvent to heat or open flames.

CAUTION: Do not apply MEK to painted surfaces.

6. Clean sextant cover seat with MEK. Rinse with isopropyl alcohol and freon.

7. Apply a narrow band of adhesive EPON 954 to sextant cover seat, P/N 1021382, see figure 3. Remove any excess adhesive. Clean adhesive from all surfaces not to be bonded.

8. Carefully install sextant cover seat, P/N 1021382, over flex print circuit board and seat properly to sextant housing, orient to location obtained during trial fit (step 2). Assemble clamp, P/N 1021383, to seat and align tapped holes in clamp with grooves on circumference of seat.

9. Lower sextant cover and baffle assembly onto sextant cover clamp and seat. Align holes and secure assembly to clamp and seat with six (6) captive screws, P/N 1008484-001. Torque 5 to 6 inch pounds. Check clearance as described in paragraph (4).

VII. D. PROCEDURE (CONTINUED)

NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473 Grade N, Form R, and allow to dry.

10. Apply adhesive, MIL-S-22473, grade C to threads of two (2) screw tube fasteners, P/N 1021379, and torque to 4 ± 1 inch pounds. Allow adhesive to cure for a minimum of 16 to 24 hours at room temperature.

PER MO 1002111

11. Remove potting ring, P/N 1021340, from telescope. Remove potting ring by pulling attached strings until ring splits apart. After ring splits, pull away from telescope assembly and dispose of potting ring in accordance with section IX.

12. Locate P/N 2010790 on Optical Unit and Bellows Assembly. Remove dash number and replace with new dash number in accordance with section III, Units Affected.

13. Update applicable records as directed in section VIII.

14. Dispose of removed parts in accordance with section IX.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

   e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

   f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

   g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

VIII. MODIFICATION DESIGNATION (CONTINUED)

E. Significant part number changes resulting from this modification are as listed in section III.

IX. DISPOSITION OF PARTS REMOVED

Scrap removed parts via AC Electronics form MIL-127 or equivalent.

ACC Form No. 1
2/23/66

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ______________ Date: ________ G&N # ________

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No. 1a for each of the following levels of equipment.

BLACK BOXES, REPARABLE SUB-ASSEMBLIES

RETROFIT INSTRUCTION BULLETIN (RIB) FOR INSTALLATION OF ASTROSEXTANT PASSIVE THERMAL PROTECTION SYSTEM ASSEMBLY, P/N 1021373-051, ONTO G&N SYSTEMS 204 THROUGH 209.
ORIGINATOR: AC ELECTRONICS DIVISION, GMC

REVISION LETTER	TDRR	PAGES REVISED	APPROVALS		DATE
			[redacted]	NASA	
A	33013	ALL INITIAL RELEASE		—	16 FEB 67

Prepared by Konrad K Forsythe Date 16 Dec 66
P.C. Engineering Approval H. Miller Date 12/27/66
Design Review Board Approval Date 14 Feb 67
MIT/IL Approval Date
NASA Approval Date
MIT Reliability Date

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) is to provide instructions for the installation of the Astrosextant Passive Thermal Protection System. This modification is being performed to add crown halves and retainer blocks to the cover and baffle assembly. This modification is being performed to add the astrosextant passive thermal protective system to prevent thermal damage to the optics and bellows on reentry.

II. AUTHORITY

This retrofit is authorized by CCA497-0309, in lieu of approval of ECP 0428.

III. UNITS AFFECTED

Name	Part Number
Astrosextant Passive Thermal Protection System Assembly (For G&N System 204 through 209)	1021373-051

IV. PRIORITY CHANGES

RIB 0102673

V. RELATED CHANGES

RIB 0102673

VI. MATERIALS REQUIRED

A. One retrofit kit, P/N 8102705, consisting of the following items is required to modify the Astrosextant Passive Thermal Protection System Assembly.

Qty	Part Number	Description
1	0102674	Retrofit Instruction Bulletin
1	1021378-021	Crown Half & Plug Assy Sextant (Matched Assy)
1	1021377-021	Crown Half & Plug Assy Telescope (Matched Assy)
4	1008487-001	Screw, slotted hd. cap
1	1008487-002	Screw, slotted hd. cap
4	1008487-003	Screw, slotted hd. cap
13	1008486	Washer, flat
4	1008488-000	Screw, slotted, special
7	1008493	Insulator

VI. MATERIALS REQUIRED (CONTINUED)

B. Materials and special tools required but not supplied in the kit are as follows:

Qty	Part Number	Description
1	Locating Fixture-SXT	Retainer Assy MX117143
AR	Dupont type TF	Freon cleaning agent
AR	FED-TT-I-735	Isopropyl alcohol
AR	TT-M-261	Methyl-Ethyl-Ketone (MEK)
AR	N/A	Surface Primer (MIL-S-22473, Grade N, Form R)
AR	N/A	Adhesive (MIL-S-22473, Grade C) Sealing and retaining compound

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

B. PRE-INSTALLATION PROCEDURE.

1. When NAA supplied inner ablator assembly is installed (see figures 1 and 2), perform trial fit of sextant and telescope crown, to determine amount of material to be removed from inner ablator assembly to provide .187 gap clearance.

2. Obtain crown half and plug assembly, P/N 1021377 -021. Remove fillet protector and plugs but identify plugs so they may be returned in same holes.

3. Assemble and match crown half lower telescope cover to cover and baffle assembly with two (2) screws, P/N 1008487-003, and two (2) washers, P/N 1008486.

VII. B. PROCEDURE (CONTINUED)

NOTE: Ensure sextant lower crown half, P/N 1021329, slot openings are installed parallel to slot openings in cover and baffle assembly, P/N 1008480-011.

4. Obtain crown half upper sextant cover, P/N 1021320. (Part of crown half and plug assembly, P/N 1021378 -021). Remove plugs, P/N 1021322-001, identify plugs in order to reassemble in same holes.

5. Install crown half lower sextant cover, P/N 1021329, to sextant cover and baffle assembly, P/N 1008480 -011, using four (4) insulators, P/N 1008493, four (4) washers, P/N 1008486, and four (4) sextant cover special slotted screws, P/N 1008488-000.

NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473, Grade N, Form R, and allow to dry.

NOTE: There shall be a minimum of 1/32 inch clearance between crown halves of the sextant lower crown half and telescope lower crown half when the sextant and telescope are each rotated 360° with respect to one another. If 1/32 inch clearance is obtained, remove screws and apply sealing and retaining compound, MIL-S-22473, grade C, PER ND 1002211 to threads of sextant's (4) special slotted screws, P/N 1008488-000, and telescope's (2) slotted head cap screws, P/N 1008487-003, torque to 9 ± 1 inch pounds, and skip to step VII.C.1. If clearance is not obtained, perform step 6.

VII. B. PROCEDURE (CONTINUED)

6. Remove sextant lower crown half and telescope lower crown half. Remove material from telescope lower crown half until there is a minimum clearance of 1/32 inch between crown halves. See figure 1. Replace sextant and telescope lower crown halves and apply sealing and retaining compound, MIL-S-22473, grade C, PER ND 1002211 to threads of screws and torque to 9 ± 1 inch pounds.

C. CROWN HALF INSTALLATION FOR TELESCOPE.

NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473, Grade N, Form R, and allow to dry.

1. Position and orient fillet, protector, P/N 1008496, to lower crown half. Install 3 insulators P/N 1008493 into appropriate holes in the lower crown half. Attach with total of three screws (one (1), P/N 1008487-002, two (2), P/N 1008487-003) and three (3) washers, P/N 1008486. Apply sealing and retaining compound, MIL-S-22473, grade C PER ND 1002211 to threads. Torque screws to 9 ± 1 inch pounds.

2. Obtain three (3) plugs, P/N 1021322-002, removed in step VII.B.2, and insert them into telescope cover protector fillet, P/N 1008496, until their surfaces are flush with outer surfaces.

3. Vacuum area to remove loose chips and dirt.

VII. PROCEDURE (CONTINUED)

D. CROWN HALF INSTALLATION FOR SEXTANT.

NOTE: Before applying adhesive per MIL-S-22473, apply surface primer, MIL-S-22473, Grade N, Form R, and allow to dry.

NOTE: Use retainer assembly locating fixture (SXT) MX117143 to assure proper location of crown halves. See figure 3 for reference.

1. Obtain sextant cover upper crown halves, P/N 1021320, and install using four (4) washers, P/N 1008486, and four (4) slotted head cap screws, P/N 1008487-001, apply sealing and retaining compound, MIL-S-22473, grade C, PER ND 1002211 Torque screws to 9 ± 1 inch pounds.

2. Obtain four (4) plugs P/N 1021322-001, removed in step VII.B.4, and screw plugs into place so they are flush with outer surface.

3. Vacuum area to remove loose chips and dirt.

4. Update applicable records as directed in section VIII.

5. Scrap removed parts via AC Electronics form MIL-127 or equivalent.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

Design Review Board Approval ________ Date 14 Feb 67

MIT/IL Approval ________ Date ________

NASA Approval ________ Date ________

MIT Reliability ________ Date ________

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) is to provide instructions for the installation of the Astrosextant Passive Thermal Protection System. This modification is being performed to add crown halves and retainer blocks to the cover and baffle assembly. This modification is being performed to add the astrosextant passive thermal protective system to prevent thermal damage to the optics and bellows on reentry.

II. AUTHORITY

This retrofit is authorized by CCA497-0309, in lieu of approval of ECP 0428.

III. UNITS AFFECTED

Name	Part Number
Astrosextant Passive Thermal Protection System Assembly (For G&N System 204 through 209)	1021373-051

IV. PRIORITY CHANGES

RIB 0102673

V. RELATED CHANGES

RIB 0102673

VI. MATERIALS REQUIRED

A. One retrofit kit, P/N 8102705, consisting of the following items is required to modify the Astrosextant Passive Thermal Protection System Assembly.

Qty	Part Number	Description
1	0102674	Retrofit Instruction Bulletin
1	1021378-021	Crown Half & Plug Assy Sextant (Matched Assy)
1	1021377-021	Crown Half & Plug Assy Telescope (Matched Assy)
4	1008487-001	Screw, slotted hd. cap
1	1008487-002	Screw, slotted hd. cap
4	1008487-003	Screw, slotted hd. cap
13	1008486	Washer, flat
4	1008488-000	Screw, slotted, special
7	1008493	Insulator

VI. MATERIALS REQUIRED (CONTINUED)

B. Materials and special tools required but not supplied in the kit are as follows:

Qty	Part Number	Description
1	Locating Fixture-SXT	Retainer Assy MX117143
AR	Dupont type TF	Freon cleaning agent
AR	FED-TT-I-735	Isopropyl alcohol
AR	TT-M-261	Methyl-Ethyl-Ketone (MEK)
AR	N/A	Surface Primer (MIL-S-22473, Grade N, Form R)
AR	N/A	Adhesive (MIL-S-22473, Grade C) Sealing and retaining compound
AR	N/A	Trichloroethylene

VII. PROCEDURE

A. GENERAL REQUIREMENTS.

1. Read and understand complete RIB prior to attempting this modification.

2. All workmanship shall meet requirements defined in Workmanship Standard, AC-STD-1, dated 15 January 1965.

B. PRE-INSTALLATION PROCEDURE.

1. When NAA supplied inner ablator assembly is installed (see figures 1 and 2), perform trial fit of sextant and telescope crown, to determine amount of material to be removed from inner ablator assembly to provide .187 gap clearance.

2. Obtain crown half and plug assembly, P/N 1021377 -021. Remove fillet protector and plugs but identify plugs so they may be returned in same holes.

3. Assemble and match crown half lower telescope cover to cover and baffle assembly with two (2) screws, P/N 1008487-003, and two (2) washers, P/N 1008486.

VII. B. PROCEDURE (CONTINUED)

NOTE: Ensure sextant lower crown half, P/N 1021329, slot openings are installed parallel to slot openings in cover and baffle assembly, P/N 1008480-011

4. Obtain crown half upper sextant cover, P/N 1021320. (Part of crown half and plug assembly, P/N 1021378 -021). Remove plugs, P/N 1021322-001, identify plugs in order to reassemble in same holes.

5. Install crown half lower sextant cover, P/N 1021329, to sextant cover and baffle assembly, P/N 1008480 -011, using four (4) insulators, P/N 1008493, four (4) washers, P/N 1008486, and four (4) sextant cover special slotted screws, P/N 1008488-000.

   NOTE: Before applying adhesive, per MIL-S-22473, clean parts in Trichloroethylene, then Freon, air dry, and apply surface primer, MIL-S-22473, Grade N, Form R, and allow to dry.

   NOTE: There shall be a minimum of 1/32 inch clearance between crown halves of the sextant lower crown half and telescope lower crown half when the sextant and telescope are each rotated 360° with respect to one another. If 1/32 inch clearance is obtained, remove screws and apply sealing and retaining compound, MIL-S-22473, grade C, per ND1002211 to threads of sextant's (4) special slotted screws, P/N 1008488-000, and telescope's (2) slotted head cap screws, P/N 1008487-003, torque to 9 ± 1 inch pounds, and skip to step VII.C.1. If clearance is not obtained, perform step 6.

VII. B. PROCEDURE (CONTINUED)

6. Remove sextant lower crown half and telescope lower crown half. Remove material from telescope lower crown half until there is a minimum clearance of 1/32 inch between crown halves. See figure 1. Replace sextant and telescope lower crown halves and apply sealing and retaining compound, MIL-S-22473, grade C, per ND 1002211 to threads of screws and torque to 9 ± 1 inch pounds.

C. CROWN HLAF INSTALLATION FOR TELESCOPE.

NOTE: Before applying adhesive, per MIL-S-22473, clean parts in Trichloroethylene, then Freon, air dry, and apply surface primer, MIL-S-22473, Grade N, Form R, and allow to dry.

1. Position and orient fillet, protector, P/N 1008496, to lower crown half. Install 3 insulators P/N 1008493 into appropriate holes in the lower crown half. Attach with total of three screws (one (1), P/N 1008487-002, two (2), P/N 1008487-003) and three (3) washers, P/N 1008486. Apply sealing and retaining compound, MIL-S-22473, grade C per ND 1002211 to threads. Torque screws to 9 ± 1 inch pounds.

2. Obtain three (3) plugs, P/N 1021322-002, removed in step VII.B.2, and insert them into telescope cover protector fillet, P/N 1008496, until their surfaces are flush with outer surfaces.

3. Vacuum area to remove loose chips and dirt.

VII. PROCEDURE (CONTINUED)

D. CROWN HALF INSTALLATION FOR SEXTANT.

NOTE: Before applying adhesive, per MIL-S-22473, clean parts in Trichloroethylene, then Freon, air dry, and apply surface primer, MIL-S-22473, Grade N, Form R, and allow to dry.

NOTE: Use retainer assembly locating fixture (SXT) MX117143 to assure proper location of crown halves. See figure 3 for reference.

1. Obtain sextant cover upper crown halves, P/N 1021320, and install using four (4) washers, P/N 1008486, and four (4) slotted head cap screws, P/N 1008487-001, apply sealing and retaining compound, MIL-S-22473, grade C, per ND 1002211. Torque screws to 9 ± 1 inch pounds.

2. Obtain four (4) plugs P/N 1021322-001, removed in step VII.B.4, and screw plugs into place so they are flush with outer surface.

3. Vacuum area to remove loose chips and dirt.

4. Update applicable records as directed in section VIII.

5. Scrap removed parts via AC Electronics form MIL-127 or equivalent.

VIII. MODIFICATION DESIGNATION

A. Complete Apollo Configuration Control (ACC) form no. 1 as follows:

NOTE: One reproducible master of ACC form no. 1 shall be completed for each retrofit or repair accomplished on Apollo airborne GFP equipment.

1. Insert name of reporting facility, date retrofit or repair is initiated, and the G & N number which is being retrofitted or repaired. If a spare is being changed, enter the word "SPARE" instead of a G & N number.

2. Complete the chart as follows:

   a. Equipment Name - List the name of each serialized assembly involved in the retrofit or repair, starting with the highest assembly down to the lowest repairable subassembly.

   b. Equip. P/N Prior to Repair/Ret. - List the part number for each assembly listed in the first column prior to its repair or retrofit.

   c. Equip. S/N - List the serial number for each assembly listed in the first column.

VIII. MODIFICATION DESIGNATION (CONTINUED)

d. Retrofit Installed - List the ECP number and the retrofit kit part number of the retrofit. The ECP number shall be the same for each item of equipment. Insert N/A for repairs.

e. Equip. P/N or MD Sym. After Rep./Ret. - Upon completion of the repair or retrofit, list the newly assigned part number or modification symbol. Insert N/A if there is no part number change or modification symbol assignment.

f. Additional Information - Add any additional pertinent information.

3. Above MODS Installed - The individual responsible for the retrofit or repair shall enter the date the change was completed and sign the form.

4. Q. A. Verification - The Quality Assurance individual responsible for inspecting the retrofit or repair shall enter the date of verification and sign the form.

B. Complete Apollo Configuration Control (ACC) form no. 1a as follows:

NOTE: One or more reproducible masters of ACC form no. 1a shall be completed for each serialized assembly listed on ACC form no. 1 in which parts as assemblies were added and/or removed during retrofit or repair.

VIII. MODIFICATION DESIGNATION (CONTINUED)

1. Equipment Name, P/N, S/N - Insert the equipment name, part number, and serial number of the assembly being repaired or retrofitted.

2. ECP No., Retrofit Kit No. - If a retrofit, insert the ECP and retrofit kit numbers.

3. Repair - If a repair; check the repair block.

4. Complete the chart as follows:

   a. Parts A/R - Insert "A" or "R" indicating if the part is added or removed.

   b. Qty. - Insert the quantity of the added and/or removed part.

   c. Part Name - Insert the name of the added and/or removed part.

   d. P/N - Insert the part number of the added and/or removed part.

   e. S/N - Insert the serial number of the added and/or removed part if it has one. If it has no serial number, leave blank.

   f. Lot No. - Insert the lot number of the added and/or removed part if it has one. If it has no lot number, leave blank.

VIII. MODIFICATION DESIGNATION (CONTINUED)

g. Additional Information - Add any additional pertinent information.

5. Equipment P/N After Rep./Ret. - Insert the newly assigned part number or N/A if there is no part number change after repair or retrofit.

C. Copies of ACC Forms no. 1 and 1a should be made and retained by the reporting facility. The reproducible masters shall be forwarded to the following address as soon as possible after its completion.

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

D. Update the Acceptance Data Package as follows:

1. Insert the Kit Acceptance Data List in the Unit Acceptance Data List.

2. Make necessary entry in the Equipment Inventory Record sheet.

3. Record performance of the modification on existing Unit History Record sheet (Referencing this RIB) and start a new Unit History Record sheet for the new part number unit. Retain old Unit History Record sheet in Acceptance Data Package.

ACC Form No. 1

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ______________ Date: ________ GAN # ______

The following information must be submitted to Apollo Program Office, Department 32-31, AC Electronics - Milwaukee upon the completion of any retrofit or repair performed on Apollo GFP equipment.

For in-house retrofit effort, this report will be submitted to Department 08-48 for processing and then forwarded to Department 32-31.

All MD symbols or P/N changes affecting each of the following levels of equipment shall be reported below. Parts added or removed shall be reported on ACC Form No. 1a for each of the following levels of equipment.

I. **PURPOSE:**

Retrofit instructions for AGC Calibration System, part number 1014217. The following provision will be incorporated by this change:

1. To add a Digital Ohmmeter in the Calibration System to facilitate Block I and Block I (100 Series) Computer Subsystem Checkout.

II. **AUTHORITY:**

This retrofit is authorized by NAS 9-497.

III. **UNITS AFFECTED:**

Name	Part No.	Retrofit S/N's	New Part No.
AGC Calibration System	1014217	RAY2 thru RAY6	1020344-011
Handle Slide Assy	1014303-2	RAY 2 thru RAY6	1020211-011

IV. **PRIORITY CHANGES:**

RIB No. 0104042

V. **RELATED CHANGES:**

None

VI. **MATERIAL REQUIRED:**

1. One (1) retrofit kit, part number 8104091, containing the following:

Item	Quantity	Nomenclature	Part No.
a.	1	Right hand bracket	1020430
b.	1	Left hand bracket	1020431
c.	1	Digital ohmmeter	1006438
d.	4	Flat head screw	MS35200-54
e.	1	Identification plate	1020085
f.	1	Identification plate	1020086
g.	2	Serrated strip grommet	1001662-3
h.	1	Retrofit Instruction Bulletin	0104072
i.	4	Drive screw	AN535-4-4

2. Material required but not supplied in kit:

Item	Quantity	Nomenclature	Part No.
a.	A/R	Wire, Electrical Blk.	MIL-W-16878/4-E24
b.	A/R	Solder	ND 1002075
c.	A/R	Black ink	1006271-10
d.	A/R	Cotton swabs	N/A
e.	A/R	Masking tape, 1/2-inch wide	/ N/A
f.	A/R	Lacing tape	1006458-004
g.	A/R	Insulation sleeving, AWG10	MIL-I-631, Type F, Form UA, Grade A, Class 1, Category 1
h.	A/R	Chem-Stripper	N/A
i.	A/R	Isopropyl alcohol	TT-I-735
j.	A/R	Methyl ethyl keytone	TT-M-261
k.	A/R	Cement	MIL-C-4003
l.	A/R	Self curing adhesive	1006981

3. Recommended tools required but not supplied in kit:

Item	Quantity	Nomenclature	Part No.
a.	1	Keyhole saw	Lafayette HG-731 or equivalent
b.	1	Assorted five piece file set	Lafayette HG-456 or equivalent

4. Documents required but not supplied in kit:

Item	Nomenclature	Document No.
a.	Engineering Drawing, Printing Recorder, Reworked	1020210, Rev D
b.	Engineering Drawing, Recorder and Digital Ohmmeter Assembly	1020211, Rev C
c.	Engineering Drawing, AGC Calibration System Console Assembly	1020344, Rev B
d.	Job Description Card	JDC 04827, Rev-
e.	Job Description Card	JDC 04828, Rev-
f.	Workmanship Standard	AC-STD-1 (3 March 1964)

VII. **PROCEDURE:**

1. General Instructions

   a. Check SIDL for latest revision to this RIB.

   b. Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outlined herein.

   c. Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

   d. All workmanship shall meet standards as defined in Workmanship Standard AC-STD-1, dated 3 March 1964.

   e. Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

2. Retrofit the Calibration System (1014217) using retrofit kit 8104091.

   a. Disconnect the power and signal cables on the rear of the Recorder Unit.

   b. Unfasten the recorder front panel hardware and remove the recorder from the cabinet.

   c. Unbutton the recorder rear hinged panel and hinge the panel down.

   d. Remove the recorder top cover panel by sliding the panel rearward.

   e. Refer to view A-A on engineering drawing 1020210. Face the rear of the recorder and remove the small plate located below and to the left of the hinged panel and to the right of the Blue Ribbon connector.

   f. Remove the hardware securing the blank front panel of the recorder unit and remove the blank front panel. Retain the hardware for reassembly.

   g. Refer to section B-B on engineering drawing 1020210. Locate the two (2) printed circuit board connector mounting cutouts (XA15-1 and XA14-1) on the partition located approximately 2/3 rds from the front of the unit.

   h. Remove the adjacent printed circuit boards from the partition and cover the electrical components in the area of the connector cutouts with masking tape for protection against metal filings during rework.

i. Using a keyhole saw, remove metal around uncovered connector mounting holes on the rear of the unit (view A-A of engineering drawing 1020210) and remove metal from around connector mounting holes (XA15-1 and XA14-1) on partition (section B-B of engineering drawing 1020210). Remove burrs and sharp edges with a file.

j. Assemble grommet, (1001662-3) supplied in kit, as required around enlarged connector cutouts (view A-A and section B-B of engineering drawing 1020210)using adhesive (1006981).

k. Replace printed circuit boards and remove the masking tape from components.

l. Refer to drawing 1020210 and relocate connectors on printed circuit boards to positions shown.

m. Locate the small square cutout in the same partition as the printed circuit board connector cutouts. Assemble grommet, (1001662-3) supplied in kit, to the cutout (section B-B of engineering drawing 1020210) using adhesive (1006981) as required.

n. Assemble right hand bracket (1020430), and left hand bracket (1020431) supplied in kit to front of recorder unit where blank panel was removed. Use hardware retained from disassembly.

o. Remove the four screws securing connectors J101 and J102 (Blue Ribbon Connectors) to the rear of the Digital Recorder.

p. Pull out the connectors carefully to allow access to the pins on the rear of the connectors.

q. Unsolder the wire connected to pin 9 of connector J102. Cut off the exposed conductor and tie the wire back using lacing tape, 1006458-004.

r. Strip 3/16-inch and tin, a 6-inch length of number 24 AWG black teflon insulated wire.

s. Run the unstripped end into the J101 connector cutout and out the J102 connector cutout.

t. Unsolder the wire removed in step s and the stripped end of the black teflon wire.

u. Twist together the wire removed in step s and the stripped end of the black teflon wire.

v. Place a 5/8-inch length of insulation sleeving (MIL-I-631) over the twisted pair.

w. Solder the twisted pair to pin 48 of connector J101.

x. Slide the sleeving installed in step v over pin 48 of connector J101.

---

y. Cut the black teflon wire to the proper length for soldering to pin 9 of connector J102.

z. Strip the wire 1/8-inch and tin.

aa. Place a 5/8-inch length of insulation sleeving (MIL-I-631) over the wire.

ab. Solder the wire to pin 9 of connector J102.

ac. Slide the sleeving installed in step z over pin 9 of connector J102.

ad. Reinstall the two connectors using four screws removed in step n.

ae. Refer to section B-B on engineering drawing 1020211. Assemble digital ohmmeter 1006438, supplied in kit, half way into recorder unit. Install power cable through small square opening at bottom of partition. Install signal cable through enlarged connector cutouts at top of partition and through enlarged connector cutout on rear of recorder unit.

af. Install digital ohmmeter fully into recorder unit and secure to left and right hand brackets using four (4) flat head screws (MS35200-54) supplied in kit.

ag. Connect data output cable from digital ohmmeter to the bottom Blue Ribbon connector on the recorder (section A-A of engineering drawing 1020211).

ah. Replace the sliding top cover on the recorder unit; hinge up rear hinged panel and button in place.

ai. Use Chem-Stripper and cotton swabs and remove existing weight from the side of the assembly.

aj. Neutralize action of Chem-Stripper with isopropyl alcohol.

ak. Stencil .25-inch high characters "69.2" in the same location as the original weight using black ink (1006271-10).

al. Stencil .12-inch high characters "1020210-011 REV B" in the location shown on view C-C of engineering drawing 1020210, using black ink (1006271-10).

am. Remove the existing identification plate from the left side of the Recorder and Digital Ohmmeter Assembly. Clean the adhesive from the panel using adhesive solvent (TT-M-261).

---

an. Apply cement (MIL-C-4003) to the rear surface of the new identification plate (1020085), supplied in the kit, and install in the same position as the plate removed in step al.

ao. Install the Recorder and Digital Ohmmeter Assembly into the Calibration System cabinet and secure the front panel hardware.

ap. Connect the recorder and digital ohmmeter power cords to the power outlets in the cabinet.

aq. Connect the signal cable from top Blue Ribbon connector to the electronic counter unit. (Refer to section A-A of engineering drawing number 1020211.)

ar. Test the modified Calibration System per JDC's 04827 and 04828.

VIII. MODIFICATION DESIGNATION:

1. Drill out and remove the four (4) rivets and identification plate secured to the top of the Calibration System cabinet.

2. Install new identification plate (1020086), supplied in kit, in same location as old identification plate, using four (4) drive screws (AN535-4-4) supplied in kit.

IX. DISPOSITION OF REMOVED PARTS:

4. Recommended tools required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	1	Keyhole saw	Lafayette HG-731 or equivalent
b.	1	Assorted five piece file set	Lafayette HG-456 or equivalent

5. Documents required but not supplied in kit:

Item	Nomenclature	Document No.
a.	Engineering Drawing Printing Recorder, Reworked	1020210

Item	Nomenclature	Document No.
b.	Engineering Drawing, Recorder and Digital Ohmmeter Assembly	1020211
c.	Engineering Drawing, AGC Calibration System Console Assembly	1020344
d.	Job Description Card	JDC 04827
e.	Job Description Card	JDC 04828
f.	Workmanship Standard	AC-STD-1 (3 March 1964)
g.	Touch-up of Anodized Aluminum	ND 1002040
h.	Marking General Specification for	ND 1002019
i.	Process Specification, Soldering of Electrical Connections	ND 1002071

VII. PROCEDURE:

1. General Instructions

   a. Check SIDL for latest revision to this RIB.

   b. Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outlined herein.

   c. Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

   d. All workmanship shall meet standards as defined in Workmanship Standard AC-STD-1, dated 3 March 1964.

   e. Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

2. Retrofit the Calibration System (1014217) using retrofit kit 8104091 and retrofit kit 8104067.

   a. Disconnect the power and signal cables on the rear of the Recorder Unit.

   b. Unfasten the recorder front panel hardware and remove the recorder from the cabinet.

   c. Unbutton the recorder rear hinged panel and hinge the panel down.

   d. Remove the recorder top cover panel by sliding the panel rearward.

   e. Remove bottom cover panel from recorder and retain hardware.

   f. Remove and discard felt lining from top cover, bottom cover, and inside of recorder case. Clean adhesive from panels using TT-T-548 (refer to engineering drawing 1020210).

   g. Rework top and bottom covers per engineering drawing 1020210. Touch-up surfaces of bare metal per ND 1002040.

   h. Rivet wire mesh and frame, supplied in kit, to top cover as shown on engineering drawing 1020210.

   i. Assemble bottom cover over rear section of recorder using four (4) flat heat screws. Discard remaining two (2) screws.

   j. Refer to view A-A on engineering drawing 1020210. Face the rear of the recorder and remove the small plate located below and to the left of the hinged panel and to the right of the Blue Ribbon connector.

   k. Remove the hardware securing the blank front panel of the recorder unit and remove the blank front panel. Retain the hardware for reassembly.

   l. Refer to section B-B on engineering drawing 1020210. Locate the two (2) printed circuit board connector mounting cutouts (XA15-1 and XA14-1) on the partition located approximately 2/3 rds from the front of the unit.

   m. Remove the adjacent printed circuit boards from the partition and cover the electrical components in the area of the connector cutouts with masking tape for protection against metal filings during rework.

   n. Using a keyhole saw, remove metal around uncovered connector mounting holes on the rear of the unit (view A-A of engineering drawing 1020210) and remove metal from around connector mounting holes (XA15-1 and XA14-1) on partition (section B-B of engineering drawing 1020210). Remove burrs and sharp edges with a file. Touch-up surfaces of bare metal per ND 1002040.

   o. Assemble grommet, (1001662-3) supplied in kit, as required around enlarged connector cutouts (view A-A and section B-B of engineering drawing 1020210) using adhesive (1006981).

   p. Replace printed circuit boards and remove the masking tape from components.

   q. Refer to drawing 1020210 and relocate connectors on printed circuit boards to positions shown.

   r. Locate the small square cutout in the same partition as the printed circuit board connector cutouts. Assemble grommet, (1001662-3) supplied in kit, to the cutout (section B-B of engineering drawing 1020210) using adhesive (1006981) as required.

   s. Assemble right hand bracket (1020430), and left hand bracket (1020431) supplied in kit to front of recorder unit where blank panel was removed. Use hardware retained from disassembly.

   t. Remove the four screws securing connectors J101 and J102 (Blue Ribbon Connectors) to the rear of the Digital Recorder.

   u. Pull out the connectors carefully to allow access to the pins on the rear of the connectors.

   v. Unsolder the wire connected to pin 9 of connector J102. Cut off the exposed conductor and tie the wire back using lacing tape, 1006458-004.

   w. Strip 3/16-inch and tin, a 6-inch length of number 24 AWG black teflon insulated wire.

   x. Run the unstripped end into the J101 connector cutout and out the J102 connector cutout.

   y. Unsolder the wire removed in step x and the stripped end of the black teflon wire.

   z. Twist together the wire removed in step x and the stripped end of the black teflon wire.

   aa. Place a 5/8-inch length of insulation sleeving (MIL-I-631) over the twisted pair.

   ab. Solder the twisted pair to pin 48 of connector J101.

   ac. Slide the sleeving installed in step aa over pin 48 of connector J101.

   ad. Cut the black teflon wire to the proper length for soldering to pin 9 of connector J102.

   ae. Strip the wire 1/8-inch and tin.

   af. Place a 5/8-inch length of insulation sleeving (MIL-I-631) over the wire.

   ag. Solder the wire to pin 9 of connector J102.

   ah. Slide the sleeving installed in step ae over pin 9 of connector J102.

   ai. Reinstall the two connectors using four screws removed in step s.

   aj. Refer to section B-B on engineering drawing 1020211. Assemble digital ohmmeter 1006438, supplied in kit, half way into recorder unit. Install power cable through small square opening at bottom of partition. Install signal cable through enlarged connector cutouts at top of partition and through enlarged connector cutout on rear of recorder unit.

   ak. Install digital ohmmeter fully into recorder unit and secure to left and right hand brackets using four (4) flat head screws (MS35200-54) supplied in kit.

   al. Connect data output cable from digital ohmmeter to the bottom Blue Ribbon connector on the recorder (section A-A of engineering drawing 1020211).

   am. Replace the sliding top cover on the recorder unit; hinge up rear hinged panel and button in place.

   an. Use Chem-Stripper and cotton swabs and remove existing weight from the side of the assembly.

ao. Neutralize action of Chem-Stripper with isopropyl alcohol.

ap. Stencil .25-inch high characters "69.2" in the same location as the original weight using black ink (1006271-10).

aq. Stencil .12-inch high characters "1020210-021 REV C" in the location shown on view C-C of engineering drawing 1020210, using black ink (1006271-10).

ar. Remove the existing identification plate from the left side of the Recorder and Digital Ohmmeter Assembly. Clean the adhesive from the panel using adhesive solvent (TT-M-261).

as. Apply cement (MIL-C-4003) to the rear surface of the new identification plate (1020085), supplied in the kit, and install in the same position as the plate removed in step ar.

at. Install the Recorder and Digital Ohmmeter Assembly into the Calibration System cabinet and secure the front panel hardware.

au. Connect the recorder and digital ohmmeter power cords to the power outlets in the cabinet.

av. Connect the signal cable from top Blue Ribbon connector to the electronic counter unit. (Refer to section A-A of engineering drawing number 1020211.)

aw. Inspect work performed to ensure quality in accordance with referenced documents.

ax. Test the modified Calibration System per JDC's 04827 and 04828.

ay. Complete attached form and return to addressee.

VIII. MODIFICATION DESIGNATION:

1. Drill out and remove the four (4) rivets and identification plate secured to the top of the Calibration System cabinet.
2. Install new identification plate (1020086), supplied in kit, in same location as old identification plate, using four (4) drive screws (AN535-4-4) supplied in kit.

IX. DISPOSITION OF REMOVED PARTS:

1. Return all unused parts of RKA 8104167 to stores for disposition. Scrap Retrofit Instruction Bulletin 0104097.
2. Scrap nameplate, rivets, felt lining and removed portion of cover.

Handle Slide Assy	1014303-2	RAY 2 thru RAY6	1020211-011

IV. PRIORITY CHANGES:

RIB No. 0104042

V. RELATED CHANGES:

None

VI. MATERIAL REQUIRED:

1. One (1) retrofit kit, part number 8104091, containing the following:

Item	Quantity	Nomenclature	Part No.
a.	1	Right hand bracket	1020430
b.	1	Left hand bracket	1020431
c.	1	Digital ohmmeter	1006438
d.	4	Flat head screw	MS35200-54
e.	1	Identification plate	1020085
f.	1	Identification plate	1020086
g.	2	Serrated strip grommet	1001662-3
h.	1	Retrofit Instruction Bulletin	0104072
i.	4	Drive screw	AN535-4-4

2. Material required but not supplied in kit:

Item	Quantity	Nomenclature	Part No.
a.	A/R	Wire, Electrical Blk.	MIL-W-16878/4-E24
b.	A/R	Solder	ND 1002075
c.	A/R	Black ink	1006271-10
d.	A/R	Cotton swabs	N/A
e.	A/R	Masking tape, 1/2-inch wide	/ N/A
f.	A/R	Lacing tape	1006458-004
g.	A/R	Insulation sleeving, AWG10	MIL-I-631, Type F, Form UA, Grade A, Class 1, Category 1
h.	A/R	Chem-Stripper	N/A
i.	A/R	Isopropyl alcohol	TT-I-735
j.	A/R	Methyl ethyl keytone	TT-M-261
k.	A/R	Cement	MIL-C-4003
l.	A/R	Self curing adhesive	1006981

3. Recommended tools required but not supplied in kit:

Item	Quantity	Nomenclature	Part No.
a.	1	Keyhole saw	Lafayette HG-731 or equivalent
b.	1	Assorted five piece file set	Lafayette HG-456 or equivalent

4. Documents required but not supplied in kit:

Item	Nomenclature	Document No.
a.	Engineering Drawing, Printing Recorder, Reworked	1020210, Rev D
b.	Engineering Drawing, Recorder and Digital Ohmmeter Assembly	1020211, Rev D
c.	Engineering Drawing, AGC Calibration System Console Assembly	1020344, Rev B
d.	Job Description Card	JDC 04827, Rev-
e.	Job Description Card	JDC 04828, Rev-
f.	Workmanship Standard	AC-STD-1 (3 March 1964)

VII. PROCEDURE:

1. General Instructions
   - a. Check SIDL for latest revision to this RIB.
   - b. Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outlined herein.
   - c. Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.
   - d. All workmanship shall meet standards as defined in Workmanship Standard AC-STD-1, dated 3 March 1964.
   - e. Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.
2. Retrofit the Calibration System (1014217) using retrofit kit 8104091.
   - a. Disconnect the power and signal cables on the rear of the Recorder Unit.
   - b. Unfasten the recorder front panel hardware and remove the recorder from the cabinet.
   - c. Unbutton the recorder rear hinged panel and hinge the panel down.
   - d. Remove the recorder top cover panel by sliding the panel rearward.
   - e. Refer to view A-A on engineering drawing 1020210. Face the rear of the recorder and remove the small plate located below and to the left of the hinged panel and to the right of the Blue Ribbon connector.
   - f. Remove the hardware securing the blank front panel of the recorder unit and remove the blank front panel. Retain the hardware for reassembly.
   - g. Refer to view B-B on engineering drawing 1020210. Locate the two (2) printed circuit board connector mounting cutouts (XA15-1 and XA14-1) on the partition located approximately 2/3 rds from the front of the unit.
   - h. Remove the adjacent printed circuit boards from the partition and cover the electrical components in the area of the connector cutouts with masking tape for protection against metal filings during rework.

i. Using a keyhole saw, remove metal around uncovered connector mounting holes on the rear of the unit (view A-A of engineering drawing 1020210) and remove metal from around connector mounting holes (XA15-1 and XA14-1) on partition (section B-B of engineering drawing 1020210). Remove burrs and sharp edges with a file.

j. Assemble grommet, (1001662-3) supplied in kit, as required around enlarged connector cutouts (view A-A and section B-B of engineering drawing 1020210) using adhesive (1006981).

k. Replace printed circuit boards and remove the masking tape from components.

l. Locate the small square cutout in the same partition as the printed circuit board connector cutouts. Assemble grommet, (1001662-3) supplied in kit, to the cutout (section B-B of engineering drawing 1020210) using adhesive (1006981) as required.

m. Assemble right hand bracket (1020430), and left hand bracket (1020431) supplied in kit to front of recorder unit where blank panel was removed. Use hardware retained from disassembly.

n. Remove the four screws securing connectors J101 and J102 (Blue Ribbon Connectors) to the rear of the Digital Recorder.

o. Pull out the connectors carefully to allow access to the pins on the rear of the connectors.

p. Unsolder the wire connected to pin 9 of connector J102. Cut off the exposed conductor and tie the wire back using lacing tape, 1006458-004.

q. Strip 3/16-inch and tin, a 6-inch length of number 24 AWG black teflon insulated wire.

r. Run the unstripped end into the J101 connector cutout and out the J102 connector cutout.

s. Unsolder the wire connected to pin 48 of connector J101.

t. Twist together the wire removed in step s and the stripped end of the black teflon wire.

u. Place a 5/8-inch length of insulation sleeving (MIL-I-631) over the twisted pair.

v. Solder the twisted pair to pin 48 of connector J101.

w. Slide the sleeving installed in step u over pin 48 of connector J101.

x. Cut the black teflon wire to the proper length for soldering to pin 9 of connector J102.

y. Strip the wire 1/8-inch and tin.

z. Place a 5/8-inch length of insulation sleeving (MIL-I-631) over the wire.

aa. Solder the wire to pin 9 of connector J102.

ab. Slide the sleeving installed in step z over pin 9 of connector J102.

ac. Reinstall the two connectors using four screws removed in step n.

ad. Refer to section B-B on engineering drawing 1020211. Assemble digital ohmmeter 1006438, supplied in kit, half way into recorder unit. Install power cable through ~~small square opening at bottom of partition~~. Install signal cable through enlarged connector cutouts at top of partition and through enlarged connector cutout on rear of recorder unit.

ae. Install digital ohmmeter fully into recorder unit and secure to left and right hand brackets using four (4) flat head screws (MS35200-54) supplied in kit.

af. Connect data output cable from digital ohmmeter to the bottom Blue Ribbon connector on the recorder (section A-A of engineering drawing 1020211).

ag. Replace the sliding top cover on the recorder unit; hinge up rear hinged panel and button in place.

ah. Use Chem-Stripper and cotton swabs and remove existing weight from the side of the assembly.

ai. Neutralize action of Chem-Stripper with isopropyl alcohol.

aj. Stencil .25-inch high characters "69.2" in the same location as the original weight using black ink (1006271-10).

ak. Stencil .12-inch high characters "1020210-011 REV B" in the location shown on view C-C of engineering drawing 1020210, using black ink (1006271-10).

al. Remove the existing identification plate from the left side of the Recorder and Digital Ohmmeter Assembly. Clean the adhesive from the panel using adhesive solvent (TT-M-261).

am. Apply cement (MIL-C-4003) to the rear surface of the new identification plate (1020085), supplied in the kit, and install in the same position as the plate removed in step al.

an. Install the Recorder and Digital Ohmmeter Assembly into the Calibration System cabinet and secure the front panel hardware.

ao. Connect the recorder and digital ohmmeter power cords to the power outlets in the cabinet.

ap. Connect the signal cable from top Blue Ribbon connector to the electronic counter unit. (Refer to section A-A of engineering drawing number 1020211.)

aq. Test the modified Calibration System per JDC's 04827 and 04828.

VIII. MODIFICATION DESIGNATION:

1. Drill out and remove the four (4) rivets and identification plate secured to the top of the Calibration System cabinet.

2. Install new identification plate (1020086), supplied in kit, in same location as old identification plate, using four (4) drive screws (AN535-4-4) supplied in kit.

IX. DISPOSITION OF REMOVED PARTS:

2. Retrofit the AGC/GSE Interconnection Kit, G&N System Test, part number (1020313), using retrofit kit part number 8104067, as follows:

   a. Refer to engineering drawing 1020313. Dispose of the following cables listed as per paragraph IX: Test Cable assembly, W204 (1020271), cable assembly W208 (1020279), and cable assembly W209 (1020284). The other items listed are to be retained for use in the new assembly.

   b. Remove the bandmarkers on W200 cable assembly (1020241), dispose of bandmarkers per paragraph IX.

      1) Remove outer sleeving (1006696-9) from cable being careful not to damage internal wires. Discard sleeving. Cut 31.5' ± 1.0" length of sleeving (ND 1002155, type III, 1 1/2 ID) supplied in kit 8104166. Measure 6.00 ± .50 at one end of sleeving. Cut through Zipper tubing and Aluminum foil but do not cut through braid. Discard cut piece. Cut a length of sleeving 4.00 ± .12 (MIL-I-631, Awg No. 4) supplied in kit 8104166, and assemble over braid. Remove from kit, quantity one terminal lug (MS25036-53) and crimp to end of braid per ND 1002206. Measure over-all length of sleeving to fit cable under retrofit accounting for 6.00 inch length required for grounding braid, and cut. Repeat above procedure for fabricating ground braid.

      2) Assemble fabricate sleeving to cable, using engineering drawing 2014463, centering sleeving on cable, and close tubing over cable using zipper tubing closing tool and solvent (1006699). Spot tie sleeving as shown using lacing tape (1006458-004).

      3) Remove hardware securing connector strain relief clamp to cable and rework hardware to length indicated in view S-S of reference drawing (2014463). Assemble sleeved ground braid under strain relief. Assemble terminal lug strain relief clamp using reworked hardware. Repeat procedure at other end of cable. Tighten all hardware and assemble to end of reworked strain-relief mtg. hardware, one each cap nut (MS24679-22) supplied in kit, 8104166.

   c. Refer to engineering drawing 2014463. Bond to the cable three bandmarkers (1006415-141), marked per drawing (2014463-011), supplied in kit 8104166, in the indicated locations. Use cotton swabs and adhesive (1006253) as required.

   d. Remove the bandmarkers from cable assembly W201 (1020242-1). Dispose of bandmarkers per paragraph IX.

      1) Remove outer sleeving (1006696-9) from cable being careful not to damage internal wires. Discard sleeving. Cut 31.5' + 1.0" length of sleeving (ND 1002155, type III, 1 1/2" ID), supplied in kit 8104166. Measure 6.00 ± .50 at one end of sleeving. Cut through zipper tubing

bc. Remove sleeving covering each of three large groups of shielded wires. Use care so as not to damage conductors in cable. Dispose of sleeving per paragraph IX.

bd. Tap shielded group of conductors containing 27 twisted pairs and three single white conductors, identify as Group I.

be. Tag shielded group containing 18 single white conductors, identify as Group III.

bf. Tag shielded group of conductors containing 9 twisted pairs and 2 single white conductors, identify as Group II.

bg. Assemble a 23.00 ± 1.00 length of zipper sleeving (1006696-4) over shielded group of wires marked "Group I", seal using solvent (1006699) and spot tie ends of zipper sleeving over the braid, immediately, behind ferrules terminating ends of braid, using lacing tape (1006458-004).

bh. Assemble a 23.00 ± 1.00 length of zipper sleeving (1006696-3) over shielded group of wires marked "Group II", seal using solvent (1006699) and spot tie ends of zipper sleeving over the braid, immediately behind ferrules terminating ends of braid, using lacing tape (1006458-004).

bi. Assemble a 23.00 inch ± 1.00 length of zipper sleeving (1006996-3) over shielded group of wires marked "Group III", seal using solvent (1006699) and spot tie ends of zipper sleeving over the braid, immediately behind ferrules terminating ends of braid, using lacing tape (1006458-004).

bil. Remove P1 and P2 connector backshells and retain. Retain mtg. hardware.

bi2. Remove lacing ties and remove clear sleeving on cable legs, at backshell. Discard sleeving and lacing tape.

bi3. Cut and assemble 4 pieces of 1.50 inch ± .06 length of zipper sleeving (1006696-7), supplied in kit, 8104170, to above cable legs, at backshell, seal using solvent (1006699) and spot tie using lacing tape (1006458-004) as shown on reference drawing (2016324.)

bi4. Re-assemble connector backshells using retained hardware.

bj. Refer to engineering drawing 2016334. Tie flat lace above three groups and loose conductors between J1 and P1 in indicated area using lacing tape (1006458-004).

bk. Remove the identification tags from the three groups and dispose of them per paragraph IX.

bkl. Cut 46.5 ± 1.0 length of sleeving (ND 1002155, type III, ID 1 5/8) supplied in kit 8104170. Measure 8.50 ± .25 at one end of sleeving. Cut through zipper tubing and aluminum foil, but do not cut through braid. Discard cut piece Measure 13.75 ± .50 at other end of sleeving and cut as above. Cut a 8.00 ± .25 length of sleeving (MIL-I-731 Awg No. 4) supplied in kit and assemble terminal lug (MS25036-53) to end of braid, crimping per ND1002206.

cv. Remove lacing tape securing J2 harness and J5 harness to the component board. Retain harness and board.

cw. Remove the mounting hardware securing TB1 (1006678-3) and TB2 (1006678-4) to the mounting supports. Retain TB's and mounting hardware.

cx. Remove mounting hardware securing mounting supports (1020273, 1020261, 1020274, and 1020275). Retain supports and mounting hardware.

cy. Remove mounting hardware securing mounting supports (1020272, 1020260, 1020280, and 1020281). Retain supports and mounting hardware.

cyl. Remove mounting hardware securing toggle switch, S1 (MS35058-23) and toggle switch guard (MS25224-1) to side of buffer circuit assy. Remount switch hdwr. and dispose of switch per para. IX. Retain switch guard for re-assembly.

NOTE: Mask connectors and remaining switch to protect them from metal particles caused from drilling.

cz. Refer to engineering drawing 2014287. Drill hole, in indicated position, .344/.347 using 8.8 mm (.3465 diameter) drill bit. Fabricate a template with a .75 diameter hole and abrade the paint around the hole just drilled.

da. Refer to engineering drawing 2014287. Drill four .158/.164 diameter holes, using #20 (.1610 diameter) drill, in locations indicated.

db. Chromate bare metal with chromate (MIL-C-5541 electrically conductive). Touch up any painted areas around reworked areas with paint (TT-E-529, Class B, Fed-STD-595, Color 26251) per MIL-F-P513, Type I.

dc. Remove stencil 1020293 REV (letter) from welded assembly using cotton swabs and Chem-Stripper as required.

dd. Stop action of Chem-Stripper using cotton swabs and isopropyl alcohol as required.

de. Refer to engineering drawing 2014287. Assemble self clinching nut (1006989-27), supplied in kit 8104068, to the indicated location.

df. Refer to engineering drawing 2014287. Stencil "2014287" and "E1" in the indicated locations using stenciling tool and black ink as required.

dfl. Refer to engineering drawing 2014254. Assemble switch, toggle (MS35059-23) supplied in kit, 8104068, and retained toggle switch guard to side of welded assembly, using hardware supplied with switch in position of switch removed in cyl.

dg. Install 2014398-011 component board assembly A5 (supplied in retrofit kit) to the welded assembly (2014287) using four (4) 1006480-005 spacer posts (supplied in retrofit kit) with the following hardware (supplied in retrofit kit: eight (8) flat washers, MS15795-805, four (4) lock washers.

MS35337-79, and eight (8) pan head screws, MS51957-28. Use MIL-S-22473, GR, HV sealing and retaining compound as a locking device for screws mounting the component board to the spacers.

dh. Obtain support bracket (1020280) and refer to engineering drawing 2014250. Drill and tap for No. 4 (.112 - 40UNCX 2 DIA helical insert per MS33646,) one hole in the location indicated.

di. Assemble helical insert (MS212208CO420) supplied in kit 8104068, into hole drilled and tapped in step dh.

dj. Remove stencil 1020280 from mounting support, using Methyl Ethyl Ketone and cotton swabs as required.

~~dk. Stop action of Chem-Stripper using cotton swabs and isopropyl alcohol as required.~~

dl. Refer to engineering drawing 2014250. Stencil 2014250 in indicated location using stenciling tool and black ink as required.

dm. Refer to engineering drawing 2014254. Assemble the mounting support (2014250) to the welded assembly 2014287, using retained hardware as indicated.

dn. Obtain support bracket (1020281) and refer to engineering drawing 2014251. Drill and tap for No. 4 (.112) - 40UNC X 2 helical insert per MS33646, indicated location.

do. Assemble to hole from step dn, a helical insert (MS21208CO420), supplied in kit 8104068.

dp. Remove stencil 1020281, using cotton swabs and Methyl Ethyl Ketone as required.

~~dq. Neutralize action of Chem-Stripper using cotton swabs and isopropyl alcohol as required.~~

dr. Refer to engineering drawing 2014251. Stencil 2014251 in indicated location using stenciling tool and black ink as required.

ds. Refer to engineering drawing 2014254. Assemble to the welded assembly the mounting support (2014251) using the retained hardware as indicated.

dt. Refer to engineering drawing 2014254. Assemble mounting support (2014250) to the welded assembly and to mounting support (2014251) using the retained hardware as indicated.

du. Obtain support bracket (1020272) and refer to engineering drawing 2014252. Drill and tap for No. 4 (.112 - 40UNCX 2 DIA) helical insert per MS33646, in location indicated.

dv. Assemble helical insert (MS21208CO420) into hole from step du.

dw. Remove stencil 1020272 using Methyl Ethyl Ketone and cotton swabs as required.

~~dx. Neutralize action of the Chem-Stripper using cotton swabs and isopropyl alcohol as required.~~

dy. Refer to engineering drawing 2014252. Stencil 2014252 in indicated location using stenciling tool and black ink as required.

dz. Refer to engineering drawing 2014254. Assemble the mounting support (2014252) to the welded assembly using retained hardware as indicated.

ea. Obtain support bracket (1020260) and refer to engineering drawing 2014253. Drill and tap for No. 4 (.112 - 40UNC X 2 DIA) helical insert per MS33646, in the indicated location.

eb. Assemble helical insert (MS21208CO420) supplied in kit 8104068, into hole from step ea.

ec. Remove stencil "1020260" using Methyl Ethyl Ketone and cotton swabs as required.

~~ed. Neutralize action of the Chem-Stripper using cotton swabs and isopropyl alcohol as required.~~

ee. Refer to engineering drawing 2014253. Stencil "2014253" in indicated location using stenciling tool and black ink as required.

ef. Refer to engineering drawing 2014254. Assemble mounting support (2014253) to welded assembly, using retained hardware as indicated.

eg. Refer to engineering drawing 2014254. Assemble mounting support (2014252) to the welded assembly and mounting support (2014253) using the retained hardware as indicated.

eh. Refer to engineering drawings 1020245 and 1020248. Desolder R2 thirty five places, circuit 1 thru 35. Use desoldering kit. Dispose of resistors per paragraph IX.

1a. Refer to engineering drawing 2014126. Cut leads to proper length. Strip .50 ± .06 and tin per ND 1002071.

1b. Refer to engineering drawing 2014126. Assemble bandmarker (1006415-130, marked per 2014126-011), supplied in kit 8104068, to the harness and secure using cotton swabs and adhesive (1006253) as required.

1c. Refer to engineering drawings 2014126, 2014129, and 2014162. Assemble wiring harness branched D, and wiring harness branched A to component board assembly A3 (2014262). Solder leads per ND 1002071, remove temporary identification and dispose of tags per paragraph IX.

1d. Refer to engineering drawing 2014254. Assemble connectors J1 and J4 to the welded assembly using retained hardware as indicated.

1e. Refer to engineering drawing 2014254. Assemble component board assembly A3 to mounting supports using retained hardware as indicated.

1f. Refer to engineering drawings 2014126 and 2014201. Assemble leads of wiring harness branched B (2014127) to the terminal boards TB 1 (1006688-3) and TB 2 (1006688-4), using the existing hardware to secure leads. Remove temporary identification from leads and dispose of tags per paragraph IX.

1g. Refer to engineering drawings 1020245 and 1020246. Desolder R2 thirty five places, circuit 1 thru 35, using desoldering tool. Dispose of resistors per paragraph IX.

1h. Refer to engineering drawing 2014434. Drill two .076/.079 holes using 5/64 (.0781 diameter) drill bit, in location indicated in lower left corner of board viewed from component side.

> WARNING: Methyl ethyl keytone gives off toxic vapors. Use only in a well ventilated area.

1i. Remove stencil "1020245-2 REV (letter)" and "1020246 REV (letter) ASSY", using methyl ethyl keytone, and cotton swabs as required.

1j. Refer to engineering drawing 2014434. Stencil "R1, R2, R3, and 37" in indicated locations. Use stenciling tool and white ink as required.

1k. Refer to engineering drawing 2014434. Stencil "2014434 and 2014260-021 ASSY" in indicated locations using stenciling tool and white ink as required.

jv. Refer to engineering drawing 2014254. Add the following jumpers, using wire electrical and sleeving supplied in kit, 8104068:

From	To
S2-1	S2-4
S2-4	S1-1

jw. Refer to engineering drawing 2014254. Assemble the two covers retained from disassembly to the buffer assembly using hardware retained from disassembly.

jx. Refer to engineering drawing 2014254. Assemble to the buffer assembly the nameplate (1004260-265), supplied in kit 8104068, using cotton swabs and cement (MIL-A-5092, Type II) as required.

jy. Perform continuity check per engineering drawing 2016384.

jz. Temporarily identify connectors P1, P2, and P3 of cable assembly, W205 (1020270) with a tag or any suitable method.

ka. Remove all bandmarkers from cable assembly.

kb. Remove lacing ties and remove outer sleeving (clear) from the three cable legs, being careful not to damage internal wires or braid. Discard sleeving.

kc. At this point, remove the connector cover at the connector end. Retain cover and mounting hardware.

kd. At this point, it is required that at least half of the potting compound at P4 connector end be removed, beginning where cable conductors enter the potting to allow for rework to the header.

The method advised for removing the potting is by using a dull wooden spike and digging the potting away. Caution must be used in removing potting so as not to damage the conductors.

ke. After the potting has been removed, pivot cable legs over remaining portion of potted connector. This will allow the header to be exposed, free of conductors, for rework.

kf. Lace the cable legs to the partially potted connector in order to immobilize. Mask all of the connector pins etc., and cable legs, in area of connector to prevent metal particals from becoming imbedded in cable. See engineering drawing (2014356) for area to be reworked, before covering cable.

kg. Remove stencil markings "1020253 REV (letter) " and "1020234 REV (letter) ASSY" from connector housing using Chem-Stripper and cotton swabs, as required

kh. Neutralize Chem-Stripper with isopropyl alcohol and cotton swabs, as required.

kd. Refer to engineering drawing 2014356. Drill and tap for two no. 6 (.138) -32 UNC-2B helical insert per MS33646, in location indicated.

kj. Assemble two helical inserts, (MS21208-CO620) supplied in kit, 8104177, into holes from step kd.

kk. At this point, remove all masking from connector and cut lacing tape securing cable legs to connector. Return legs to original position.

kl. Refer to engineering drawing 2016350. Locate cable leg between P4 and P1 connector designated at one end "E75" and "E76" at the other. Cut 9.50 ± .25 length of zipper tubing (1006696-4) supplied in kit, and assemble over this leg and close, using zipper tubing closing tool and solvent (1006699) as required.

km. Cut two pieces of zipper tubing (1006696-3) supplied in kit 9.50 ± .25 long and assemble over each of the other legs of the cable between P4 and P1 connectors. Close using zipper tubing closing tool, and solvent (1006699) as required.

kn. Refer to engineering drawing 2016360. Locate cable leg between P4 and P3 connector, designated at one end "E71" and "E77" at the other end. Cut 12.00 ± .25 length of zipper tubing (1006696-2) supplied in kit, and assemble over this leg, and close using zipper tubing closing tool and solvent (1006699) as required.

ko. Cut two pieces of zipper tubing (1006696-4) supplied in kit, 12.00 ± .25 long and assemble over each of the other legs of the cable between P4 and P3 connectors. Close using zipper tubing closing tool and solvent (1006699) as required.

kp. Refer to engineering drawing 2016360. Locate cable leg between P4 and P2 connectors, designated at one end "E66" and "E68" at the other. Cut 10.50 ± .25 length of zipper tubing (1006696-4) supplied in kit, and assemble over this leg, and close using zipper tubing closing tool, and solvent (1006699) as required.

kq. Cut two pieces of zipper tubing (1006996-3) supplied in kit, 10.50 ± .25 long and assemble over each of the other legs of the cable between P4 and P2 connectors. Close using zipper tubing closing tool, and solvent (1006699) as required.

1j. Refer to engineering drawing 2016356. Stencil "2016356" and "2016358-011 ASSY" to test connector housing using white ink (1006271-1) and air brush as required.

1k. Perform a continuity check using engineering drawing 2016360.

1l. Retain for use with the AGC/GSE Interconnection Set, G&N System Test, the following items contained in retrofit kit 8104166:

Item	Quantity	Nomenclature	Part No.
a.	1	Cable Assembly, W226	2014137-011
b.	1	Cable Assembly, W232	2014484-011
c.	1	Cable Assembly, W233	2014483-011
d.	1	Cable Assembly W234	2014482-011
e.	1	Self Test Assembly	2014392-011

1h. Complete the attached form and return to addressee.

VIII. MODIFICATION DESIGNATION:

Not applicable

IX. DISPOSITION OF REMOVED PARTS:

a. Scrap all temporary identification tags, bandmarkers, lacing tape, sleeving for cables, jumpers from component board, 78 resistors (1006760-36), and capacitors (CS13AFO10K).

b. Return to stock room for disposition 3 cables, W204 (1020271), W208 (1020279), and W209 (1020284), and toggle switch (MS35058-23).

jv. Refer to engineering drawing 2014254. Add the following jumpers, using wire electrical and sleeving supplied in kit, 8104068:

From	To
S2-1	S2-4
S2-4	S1-1

jw. Refer to engineering drawing 2014254. Assemble the two covers retained from disassembly to the buffer assembly using hardware retained from disassembly.

jx. Refer to engineering drawing 2014254. Assemble to the buffer assembly the nameplate (1004260-265), supplied in kit 8104068, using cotton swabs and cement (MIL-A-5092, Type II) as required.

jy. Perform continuity check per engineering drawing 2016384.

jz. Temporarily identify connectors P1, P2, and P3 of cable assembly, W205 (1020270) with a tag or any suitable method.

ka. Remove all bandmarkers from cable assembly.

kb. Remove lacing ties and remove outer sleeving (clear) from the three cable legs, being careful not to damage internal wires or braid. Discard sleeving.

kc. At this point, remove the connector cover at the connector end. Retain cover and mounting hardware.

kd. At this point, it is required that at least half of the potting compound at P4 connector end be removed, beginning where cable conductors enter the potting to allow for rework to the header.

The method advised for removing the potting is by using a dull wooden spike and digging the potting away. Caution must be used in removing potting so as not to damage the conductors.

ke. After the potting has been removed, pivot cable legs over remaining portion of potted connector. This will allow the header to be exposed, free of conductors, for rework.

kf. Lace the cable legs to the partially potted connector in order to immobilize. Mask all of the connector pins etc., and cable legs, in area of connector to prevent metal particles from becoming imbedded in cable. See engineering drawing (2016356) for area to be reworked, before covering cable.

kg. Remove stencil markings "1020253 REV (letter)" and "1020234 REV (letter) ASSY" from connector housing using Chem-Stripper and cotton swabs, as required

kh. Neutralize Chem-Stripper with isopropyl alcohol and cotton swabs, as required.

ki. Refer to engineering drawing 2016356. Drill and tap for two no. 6 (.138) -32 UNC-2B helical insert per MS33646, in location indicated.

kj. Assemble two helical inserts, (MS21208-CO620) supplied in kit, 8104177, into holes from step ki.

kk. At this point, remove all masking from connector and cut lacing tape securing cable legs to connector. Return legs to original position.

kl. Refer to engineering drawing 2016350. Locate cable leg between P4 and P1 connector designated at one end "E75" and "E76" at the other. Cut 9.50 ± .25 length of zipper tubing (1006696-4) supplied in kit, and assemble over this leg and close, using zipper tubing closing tool and solvent (1006699) as required.

km. Cut two pieces of zipper tubing (1006696-3) supplied in kit 9.50 ± .25 long and assemble over each of the other legs of the cable between P4 and P1 connectors. Close using zipper tubing closing tool, and solvent (1006699) as required.

kn. Refer to engineering drawing 2016360. Locate cable leg between P4 and P3 connector, designated at one end "E71" and "E77" at the other end. Cut 12.00 ± .25 length of zipper tubing (1006696-2) supplied in kit, and assemble over this leg, and close using zipper tubing closing tool and solvent (1006699) as required.

ko. Cut two pieces of zipper tubing (1006696-4) supplied in kit, 12.00 ± .25 long and assemble over each of the other legs of the cable between P4 and P3 connectors. Close using zipper tubing closing tool and solvent (1006699) as required.

kp. Refer to engineering drawing 2016360. Locate cable leg between P4 and P2 connectors, designated at one end "E66" and "E68" at the other. Cut 10.50 ± .25 length of zipper tubing (1006696-4) supplied in kit, and assemble over this leg, and close using zipper tubing closing tool, and solvent (1006699) as required.

kq. Cut two pieces of zipper tubing (1006996-3) supplied in kit, 10.50 ± .25 long and assemble over each of the other legs of the cable between P4 and P2 connectors. Close using zipper tubing closing tool, and solvent (1006699) as required.

cv. Remove lacing tape securing J2 harness and J5 harness to the component board. Retain harness and board.

cw. Remove the mounting hardware securing TB1 (1006678-3) and TB2 (1006678-4) to the mounting supports. Retain TB's and mounting hardware.

cx. Remove mounting hardware securing mounting supports (1020273, 1020261, 1020274, and 1020275). Retain supports and mounting hardware.

cy. Remove mounting hardware securing mounting supports (1020272, 1020260, 1020280, and 1020281). Retain supports and mounting hardware.

cyl. Remove mounting hardware securing toggle switch, S1 (MS35058-23) and toggle switch guard (MS25224-1) to side of buffer circuit assy. Remount switch hdwr. and dispose of switch per para. IX. Retain switch guard for re-assembly.

NOTE: Mask connectors and remaining switch to protect them from metal particles caused from drilling.

cz. Refer to engineering drawing 2014287. Drill hole, in indicated position, .344/.347 using 8.8 mm (.3465 diameter) drill bit. Fabricate a template with a .75 diameter hole and abrade the paint around the hole just drilled.

da. Refer to engineering drawing 2014287. Drill four .158/.164 diameter holes, using #20 (.1610 diameter) drill, in locations indicated.

db. Chromate bare metal with chromate (MIL-C-5541 electrically conductive). Touch up any painted areas around reworked areas with paint (TT-E-529, Class B, Fed-STD-595, Color 26251) per MIL-F-P513, Type I.

dc. Remove stencil 1020293 REV (letter) from welded assembly using cotton swabs and Chem-Stripper as required.

dd. Stop action of Chem-Stripper using cotton swabs and isopropyl alcohol as required.

de. Refer to engineering drawing 2014287. Assemble self clinching nut (1006989-27), supplied in kit 8104068, to the indicated location.

de1. Install hardware supplied in kit 8104068 (Lockwasher, MS35338-82; flat washer, MS15795-810; pan hd screw, MS51957-80) into "E1" insert.

df. Refer to engineering drawing 2014287. Stencil "2014287" and "E1" in the indicated locations using stenciling tool and black ink as required.

df1. Refer to engineering drawing 2014254. Assemble switch, toggle (MS35059-23) supplied in kit, 8104068, and retained toggle switch guard to side of welded assembly, using hardware supplied with switch in position of switch removed in cyl.

dg. Install 2014398-011 component board assembly A5 (supplied in retrofit kit) to the welded assembly (2014287) using four (4) 1006480-005 spacer posts (supplied in retrofit kit) with the following hardware (supplied in retrofit kit: eight (8) flat washers, MS15795-805, four (4) lock washers.

MS35337-79, and eight (8) pan head screws, MS51957-28. Use MIL-S-22473, GR, HV sealing and retaining compound as a locking device for screws mounting the component board to the spacers.

dh. Obtain support bracket (1020280) and refer to engineering drawing 2014250. Drill and tap for No. 4 (.112 - 40UNCX 2 DIA helical insert per MS33646,) one hole in the location indicated.

di. Assemble helical insert (MS212208CO420) supplied in kit 8104068, into hole drilled and tapped in step dh.

dj. Remove stencil 1020280 from mounting support, using Methyl Ethyl Ketone and cotton swabs as required.

~~dk. Stop action of Chem-Stripper using cotton swabs and isopropyl alcohol as required.~~

dl. Refer to engineering drawing 2014250. Stencil 2014250 in indicated location using stenciling tool and white ink as required.

dm. Refer to engineering drawing 2014254. Assemble the mounting support (2014250) to the welded assembly 2014287, using retained hardware as indicated.

dn. Obtain support bracket (1020281) and refer to engineering drawing 2014251. Drill and tap for No. 4 (.112) - 40UNC X 2 helical insert per MS33646, indicated location.

do. Assemble to hole from step dn, a helical insert (MS21208CO420), supplied in kit 8104068.

dp. Remove stencil 1020281, using cotton swabs and Methyl Ethyl Ketone as required.

~~dq. Neutralize action of Chem-Stripper using cotton swabs and isopropyl alcohol as required.~~

dr. Refer to engineering drawing 2014251. Stencil 2014251 in indicated location using stenciling tool and white ink as required.

ds. Refer to engineering drawing 2014254. Assemble to the welded assembly the mounting support (2014251) using the retained hardware as indicated.

dt. Refer to engineering drawing 2014254. Assemble mounting support (2014250) to the welded assembly and to mounting support (2014251) using the retained hardware as indicated.

du. Obtain support bracket (1020272) and refer to engineering drawing 2014252. Drill and tap for No. 4 (.112 - 40UNCX 2 DIA) helical insert per MS33646, in location indicated.

dv. Assemble helical insert (MS21208CO420) into hole from step du.

dw. Remove stencil 1020272 using Methyl Ethyl Ketone and cotton swabs as required.

~~dx. Neutralize action of the Chem-Stripper using cotton swabs and isopropyl alcohol as required.~~

dy. Refer to engineering drawing 2014252. Stencil 2014252 in indicated location using stenciling tool and white ink as required.

dz. Refer to engineering drawing 2014254. Assemble the mounting support (2014252) to the welded assembly using retained hardware as indicated.

ea. Obtain support bracket (1020260) and refer to engineering drawing 2014253. Drill and tap for No. 4 (.112 - 40UNC X 2 DIA) helical insert per MS33646, in the indicated location.

eb. Assemble helical insert (MS21208CO420) supplied in kit 8104068, into hole from step ea.

ec. Remove stencil "1020260" using Methyl Ethyl Ketone and cotton swabs as required.

~~ed. Neutralize action of the Chem-Stripper using cotton swabs and isopropyl alcohol as required.~~

ee. Refer to engineering drawing 2014253. Stencil "2014253" in indicated location using stenciling tool and white ink as required.

ef. Refer to engineering drawing 2014254. Assemble mounting support (2014253) to welded assembly, using retained hardware as indicated.

eg. Refer to engineering drawing 2014254. Assemble mounting support (2014252) to the welded assembly and mounting support (2014253) using the retained hardware as indicated.

eh. Refer to engineering drawings 1020245 and 1020248. Desolder R2 thirty five places, circuit 1 thru 35. Use desoldering kit. Dispose of resistors per paragraph IX.

I. PURPOSE:

Retrofit instructions for the Computer Test Set to reduce noise on signal lines in the Programmer and Monitor Logic Plate Assembly No. 3 and the Self Test Assembly, and to correct a marginal timing condition in the asynchronous tape uplink operation circuitry in Logic Drawer No. 2.

II. AUTHORITY:

This retrofit is authorized by ECP 509, CCA 497-0409

III. UNITS AFFECTED:

Name	Part No.	Retrofit S/N	New Part No.
Computer Test Set	2014042-051	5-8, 11, 13-16, 19, 20-26	2014042-061
Drawer Assy, Programmer and Monitor	2014041-041	See Para VII 1.6	2014041-051
Logic Plate Assy No. 3	2014336-041	See Para VII 1.6	2014336-051
Self Test Assy	2014366-031	See Para VII 1.6	2014366-041
Self Test Logic Plate Assy	2014362-031	See Para VII 1.6	2014362-041
Logic Drawer No. 2 Assy	2014037-031	See Para VII 1.6	2014037-041
Logic Plate Assy No. 1	2014224-021	See Para VII 1.6	2014224-031

IV. PRIORITY CHANGES:

None.

V. RELATED CHANGES:

None.

VI. MATERIAL REQUIRED:

1. One retrofit kit, part no. 8104215, containing the following:

Sheet 3 of 11
RIB No. 0104107
Date
TDRR No.
Revision

Item	Qty	Nomenclature	Part No.
a.	1	Retrofit Instruction Bulletin	0104107
b.	3	Capacitor, 1 uf, 35 V	CS13AFC10K
c.	1	Capacitor, 750 pf, 500 V	CY22C751G
d.	5 ft.	Wire elec., blue, AWG 22	1006945-1
e.	6 in.	Sleeving, Insulation	1006776-197
f.	3 in.	Sleeving, Insulation, Clear AWG 8	MIL-I-631, Type F, Form Ua, Grade a, Class I, Category I
g.	1	Nameplate (CTS)	1004260-282
h.	1	Nameplate (P&M)	1004260-283
i.	1	Nameplate (Self Test)	1004260-279
j.	1	Nameplate (LD No. 2)	1004260-284
k.	1	Stencil, .12-inch high characters "031", "041", and "051" per ND 1002019	N/A
l.	1	Stencil, .08-inch high characters "RAY" and digits "0" through "9" per ND 1002019	N/A
m.	4	Drive Screws, Button Head	AN535-4-4
n.	1 oz.	Ink, White	1006271-1
o.	1 oz.	Ink, Black	1006271-10

2. Material required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	A/R	Chem-Stripper	N/A
b.	A/R	Isopropyl Alcohol	TT-I-735
c.	A/R	Cotton Swabs	N/A
d.	A/R	Methyl Ethyl Ketone	(MEK)
e.	A/R	Solder	ND 1002075
f.	A/R	Adhesive	MIL-A-5092, Type II

Sheet 4 of 11

TDRR No.
Revision

3. Tools required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	1	Pocket Knife	N/A
b.	1	Stenciling tool, brush or air-operated equipment	N/A
c.	1	Soldering Gun Handle	Ungar #776 or equivalent
d.	1	Soldering Tip	Ungar #4039 or equivalent
e.	1	File Set	602 X-acto or equivalent
f.	1	Ball Peen Hammer	Stanley #310 or equivalent
g.	1	Cold Chisel	Stanley #443 or equivalent
h.	1	Wirewrap Gun	14B1-C
i.	1	Wirewrap Bit	26263
j.	1	Wirewrap Extraction Tool	500130
k.	1	Sleeve, Wirewrap Bit	18840

4. Documents required but not supplied in kit:

Item	Nomenclature	Document No.
a.	Workmanship Standards	AC-STD-1 (3 Mar 64)
b.	General Specifications Soldering of Electrical Connections	ND 1002071
c.	Descriptions and Requirements, Marking, General	ND 1002019
d.	Computer Test Set Assembly	2014042
e.	Drawer Assembly, P&M	2014041
f.	Logic Plate Assembly No. 3, P&M	2014336
g.	Logic Plate No. 3 Diagram, P&M	2016452
h.	Self Test Assembly	2014366
i.	Self Test Logic Plate Assembly	2014362

3.14 Reference drawing 2014366. Bond new nameplate to the location indicated by the drawing using adhesive (MIL-A-5092) and cotton swabs.

3.15 Release slide lock and return the Self Test Drawer Assembly to its operating position. Secure handle hardware.

4. Retrofit Logic Drawer No. 2 Assembly, part no. 2014037-031, using retrofit kit 8104215 as follows:

4.1 Release Logic Drawer No. 2 by unscrewing knurled captive screws and pull the drawer out to its slide-lock position.

4.2 Lift up Logic Plate Assembly No. 1, part no. 2014224-021, to its slide-lock position and disconnect rear cable connectors. Remove assembly from Logic Drawer No. 2 by removing retaining screws (two places) and place in a clean area. Retain hardware.

4.3 Remove the black protective cover on the Logic Plate Assembly No. 1 by unscrewing the cross-head screws (16 places). Retain cover and screws for reassembly.

4.4 Using wirewrap tools, add and remove wires according to the chart provided below. When adding wire, use AWG No. 22 blue wire (1006945) provided in kit.

NOTE: Remove Z3 (top) level first, Z2 (middle) level second, Z1 (bottom) level last. Install Z1 level first, Z2 level second, Z3 level last.

REMOVE					ADD				
FROM	TO	ZL	CIRCUIT	CARD#	FROM	TO	ZL	CIRCUIT	CARD#
B29-19	B35-02	2	218-01	2151	B29-19	A33-06	2	218-02	2151
A26-04	B35-02	3	218-03	-	B35-02	A33-12	2	295-02	2301
					A26-04	A35-02	3	295-01	-
					A26-06	A33-02	3	262-03	3021
					A33-16	A33-03	2	296-01	2302
					A33-10	A33-01	3	274-08	3022

4.5 Remove stencil "021" from the part number on top of the frame support using cotton swabs and Chem-Stripper.

4.6 Neutralize the action of Chem-Stripper with isopropyl alcohol and cotton swabs.

4.7 Refer to drawing 2014224. Locate new stencil "031", provided in kit, and mark using white ink, provided in kit, and brush or air-operated equipment per ND 1002019.

4.8 Re-mount black protective cover and secure in place using hardware retained from step 4.3.

4.9 Re-mount Logic Plate Assembly No. 1 onto support brackets in chassis. Attach cable connectors and secure assembly with hardware retained from step 4.2. Lower plate and secure in place.

4.10 Remove the nameplate from the side of Logic Drawer No. 2 using a pocket knife being careful not to mar the surface of the assembly. Dispose of the nameplate per Paragraph IX.

4.11 Remove excess adhesive from assembly using Methyl Ethyl Ketone and cotton swabs.

WARNING:

Methyl Ethyl Ketone gives off toxic fumes and is flammable. Use only in a well-ventilated area and avoid open flames.

4.12 Remove nameplate (1004260-284) from kit. Note serial number on nameplate removed in step 4.10 and stencil the same number in the applicable block on the new nameplate using stencil supplied in kit ("RAY" etc.), black ink, supplied in kit, and brush or air-operated equipment. Stencil per ND 1002019.

4.13 Reference drawing 2014037. Bond new nameplate to the located indicated by the drawing using adhesive (MIL-A-5092) and cotton swabs.

4.14 Release slide lock and return Logic Drawer No. 2 to its operating position. Secure handle hardware.

5. Retest the Computer Test Set according to the following steps:

5.1 JDC 05146 (Tape Load Mode)

5.2 JDC 05135 (Tape Verify)

5.3 JDC 05163 (Tape Load Operation)

VIII. MODIFICATION DESIGNATION:

a. Note serial number on nameplate removed in step VII 2.1. Stencil the same serial number in applicable block on new nameplate (1004260-282) supplied in kit. Use black ink and applicable digits in stencil ("RAY" etc.) supplied in kit, and brush or air-brush.

b. Assemble nameplate to the top of the Computer Test Set using the button head drive screws (AN535-4-4) supplied in kit, and utilizing the existing holes in the cabinet.

IX. DISPOSITION OF REMOVED PARTS:

a. Scrap

X. REPORT OF ACCOMPLISHMENT:

a. Complete attached Form No. 53-9208 and return to addressee.

I. **PURPOSE:**

To provide a Block II test connector cover which will contain malco pins wired to connect certain pins on the test connector to ground to avoid extraneous "noise" to the computer during flight.

II. **AUTHORIZATION:**

This RIB is authorized by ECP. 474 CCA 497-0352

III. **UNITS AFFECTED:**

Name	Part Number	Retrofit S/N	New Part No.
AGC Computer Blk II	2003100-021	RAY 7, 6	2003100-081
AGC Computer Blk II	2003100-051	RAY 8	2003100-091

4. Documents required but not supplied in kit:

Item	Nomenclature	Document No.
a.	Workmanship Standard	AC-STD-1 (3 Mar 64)
b.	Description and Requirements, [illegible] Marking, General	ND 1002019
c.	Computer Assembly	2003100
d.	Computer Assembly	2003200
e.	Connector Assembly	2003099-011
f.	Bonding	ND 1002004

VII. **PROCEDURE:**

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any part unless so directed. Do not deviate from the procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard AC-STD-1, dated 3 March 1964.

1.4 Refer to documents listed in paragraph VI, part 5, for applicable ND specifications.

1.5 Serial number marked after retrofit shall be the same serial number as before retrofit.

2. Retrofit AGC Computer, part no. 2003100-021, 011, 031, 041 and 051, using retrofit kit 8104221 as follows:

2.1 Reference drawing 2003100 and locate computer nameplate (1004657) on top of assembly. Remove this nameplate using a pocket knife and being careful not to mar the surface of the assembly. Do not dispose of nameplate until para. VIII of this RIB has been accomplished.

2.2 Remove all traces of adhesive using cotton swabs and Methyl Ethyl Ketone.

g.	G&N Cable Set	2014255

VII. PROCEDURE:

NOTE: This procedure is provided in three parts, specifically:

1. General Instructions
2. Modification of A4 Board
3. Retest procedures

1. General Instructions:

   1.1 Read and understand the complete procedure prior to attempting the retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outlined herein.

   1.2 Update the Post Acceptance Data Package (PADP) as progress is made through this RIB.

   1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 March 1964.

   1.4 Refer to documents listed in Paragraph VI, part 4, for applicable ND specifications.

   1.5 Inspect all work performed to ensure quality in accordance with referenced documents.

   1.6 Serial number stencil marked after retrofit shall be the same serial number as before retrofit.

2. Retrofit Buffer Circuit Assembly, part no. 2014254-021, using retrofit kit 8104216 as follows:

   2.1 Remove the Buffer Circuit Assembly from the G&N Cable Set, part no. 2014255-031.

   2.2 Remove Cover (1020310) which is adjacent to J8 connector and covers Component Board Assembly A4 (2014265-021) by removing 18 flat head screws (MS51959-31). Retain cover and screws for reassembly.

   2.3 Remove stencil marking "2014265-021" on Component Board Assembly A4 using cotton swabs and Methyl Ethyl Ketone.

> WARNING:
>
> Methyl Ethyl Ketone is toxic and flammable. Use only in a well ventilated area and avoid open flame.

   2.4 Stencil "2016465-011" in the same location using stencil and white ink provided in kit 8104216, and brush on or spray with air-operated equipment.

   NOTE: Mask surrounding area to avoid overspray if air-operated equipment is used.

   2.5 Reference Figure 1 of this RIB and cut a proper length of white wire AWG 22, provided in kit, and solder to R1 and R2 in Buffer Circuit 14 as shown in Figure 1. Solder per ND 1002071.

   2.6 Duplicate step 2.5 for Buffer Circuit 13.

   2.7 Reassemble Cover (1020310) using hardware retained in step 2.2.

3. Retest the equipment per the following steps:

   3.1 Perform a continuity check on connector J5 from pin b to pin R, and from pin b to pin T.

   NOTE: The resultant reading should be less than one ohm.

VIII. MODIFICATION DESIGNATION:

a. Remove the nameplate (1004260-265) on the Buffer Circuit Assembly, 2014254-021, using a pocket knife being careful not to mar the surface of the assembly.

b. Remove adhesive from assembly using Chem-Stripper and cotton swabs.

c. Neutralize action of Chem-Stripper with isopropyl alcohol.

d. Remove new nameplate (1004260-285) from kit and stencil the applicable serial number using stencil and white ink, provided in kit, and brush on or spray on per ND 1002019.

e. Refer to engineering drawing 2014254. Bond the nameplate to the indicated area using adhesive, MIL-A-5092, Type II, and cotton swabs.

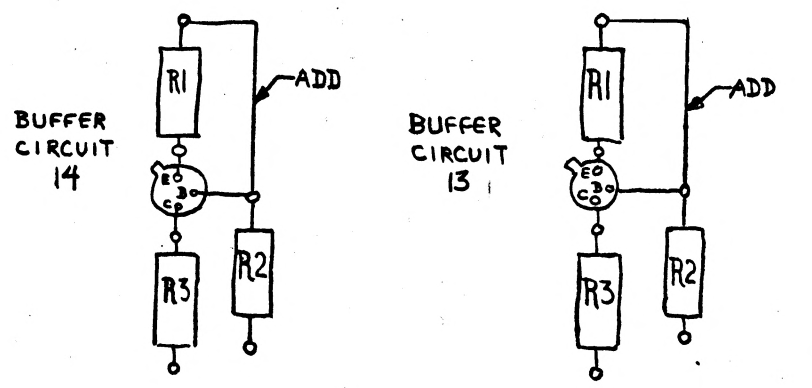

Figure 1. Buffer Box Wiring Additions

IX. DISPOSITION OF REMOVED PARTS:

Scrap.

X. REPORT OF ACCOMPLISHMENT:

Complete attached form Raytheon No. 53-9208 and return it to addressee.

RETROFIT KIT INSTALLED AND PADP UPDATED:

LEAD ENGINEER____________________DATE________________

GOVT. Q.C.____________________DATE________________

Form to be completed by the lead engineer responsible for the installation of the kit. Mail form to:

Logistics, Inventory Management and Configuration Control
Final Test Building, Box Number 7
Raytheon Company
Waltham, Massachusetts

Form No. 53-9208

WARNING:

Methyl Ethyl Ketone is toxic
and flammable. Use with
adequate ventilation and
avoid open flame.

2.3 Reference drawing 2003100 and locate A52 cover, part no. 2004115. Remove this cover by loosening captive screws and flat washers. Dispose of cover per Para. IX.

2.4 Remove new test connector cover, part no. 2003099-011, from retrofit kit and install it to the computer torquing 18-22 inch-pounds.

2.5 Record the serial number, stencilled on installed cover, in the Post Acceptance Data Package (PADP).

2.6 Reidentify computer per paragraph VIII of this RIB.

3. Retrofit AGC Computer, part no. 2003200-031, using retrofit kit 8104221 as follows:

   3.1 Reference drawing 2003200 and perform steps 2.1 through 2.5.

   3.2 Reidentify computer per paragraph VIII of this RIB.

4. Retest per the following JDC's at applicable locations:

   4.1 Raytheon JDC's 05370 and 05351.

   4.2 Field: JDC's 12208 (CMC) and 12618 (LGC).

VIII. MODIFICATION DESIGNATION:

1. Reidentify AGC Computer 2003100-021 as follows:

   1.1 Remove blank nameplate, part no. 1004260-19, from retrofit kit 8104221, and stamp "2003100-081" using stamping set and following the procedures of ND 1002019.

   1.2 Reference the nameplate removed in step VII 2.1 and stamp serial number and applicable data to the new nameplate. When this has been accomplished, dispose of old nameplate per Para. IX of this RIB.

   1.3 Reference drawing 2003100 and using adhesive, per ND 1002006 I, Type II, bond the nameplate to the computer.

---

2. Reidentify AGC Computer 2003100-051, 011, 041, and 031, following the same procedures as described in step 1 except that the dash numbers shall be as follows:

   2.1 2003100-051 becomes -091.

   2.2 2003100-011 becomes -111.

   2.3 2003100-041 becomes -071.

   2.4 2003100-031 becomes -061.

3. Reidentify AGC Computer 2003200-031 following the same procedures as described in step 1 except that the new dash number shall be "-041" and the drawing to be referenced is 2003200.

IX. DISPOSITION OF REMOVED PARTS:

1. Connector Cover to be returned to stockroom for disposition.
2. Nameplate (1004657) is to be scrapped.

X. REPORT OF ACCOMPLISHMENT:

Complete Raytheon Form No. 53-9208, and forward to addressee.

Complete and return ACC Form 1 Revised To:

AC Electronics Division
General Motors Corporation
Milwaukee, Wisconsin - 53201

Attention: Mr. J. F. Pizzala
Dept. 32-31, Bldg. 2A

NOTES:

1. INTERPRET DRAWING IN ACCORDANCE WITH STANDARDS PRESCRIBED BY MIL-D-70327.
2. MACHINED METALLIC SURFACES TO BE FINISHED PER ND1002040.
3. THERMOCOUPLE LEADS TO BE BELOW SURFACE "A" AND COMPLETELY COVERED AND EMBEDDED IN ENCAPSULANT. FILL WITH ENCAPSULANT FLUSH TO .030 BELOW SURFACE "A" PER ND1002236.
4. EACH SLEEVE TO BE MARKED WITH IT'S RESPECTIVE THERMOCOUPLE TC DESIGNATION NUMBER PER ND1002019, BLACK, CHARACTERS .12 HIGH. SLEEVE TO BE LOCATED ALONG LENGTH OF THERMOCOUPLE LEADS BETWEEN THE BRACKET AND WHERE THE WIRES EMERGE FROM THE HEADER.
5. PARTIAL REFERENCE DESIGNATIONS ARE SHOWN: FOR COMPLETE DESIGNATION PREFIX WITH UNIT NUMBER, 35A2.
6. ISOLATE THERMOCOUPLE JUNCTION FROM STRUCTURAL GROUND USING ITEM 14, BOND THERMOCOUPLE LEADS IN PLACE USING ITEM 15 WITH THE JUNCTION IN INTIMATE CONTACT WITH ITEM 14.
7. MEGGER ALL THERMOCOUPLE LEADS WITH 500V DC PER MIL-STD-202, METHOD 302. TO CHASSIS GROUND RESISTANCE SHALL BE GREATER THAN 100 MEGOHMS.
8. BOND NAMEPLATE ITEM 10 PER ND1002219.
9. REPLACE PART WITH ITEM NUMBER INDICATED.
10. CUT THERMOCOUPLE LEADS TO ALLOW FOR A STRAIN LOOP OF .50 TO 1.00 INCH WHEN ITEM 11 IS POSITIONED IN BRACKET AS SHOWN. STRIP INSULATION FROM EACH LEAD .18 TO .24 INCH AND CRIMP ITEM 12 TO BLUE LEADS AND ITEM 13 TO RED LEAD PER ND1002032.
11. MOUNTING TORQUE FOR ITEM 5 TO BE 6.2 - 6.7 INCH POUNDS.
12. VENDOR ITEM: SEE SPECIFICATION CONTROL DRAWING.
13. WHEN UNIT IS DELIVERED TO FIELD SITE, CLEAN AREAS TO BE SEALED ON THERMOCOUPLE BRACKET BY SCRUBBING, USING FREON, ISOPROPYL ALCOHOL AND DISTILLED WATER AS SOLVENTS. APPLY FILLET OF SEALANT 1006338-000 AT INTERFACE OF ITEM 2 AND THE MATING SURFACE OF ITEM 16. APPLY SEALANT TO HEAD OF ITEM 4 AND NUTS ON ITEM 2 COMPLETELY COVERING THE END OF ITEM 4. COVER HEAD OF ITEM 5 OVERLAPPING 1/16 ON ITEM 2.

Revision

I. **PURPOSE:**

To screen the Block I DSKY Relay Modules, part no. 1003824-011, to insure their optimum operation during vibration, and to add rubber isolators to the Block I AGC Main DSKY's, part nos. 1003563-031, and 1003707-031, and AGC Nav DSKY, part no. 1003706-031, to similarly insure their optimum operation during high frequency vibration.

II. **AUTHORITY:**

This retrofit is authorized by AC ECP 0441 R1. (CCA-497-0327)

III. **UNITS AFFECTED:**

Name	Part No.	Retrofit S/N	New Part No.
AGC Main DSKY	1003707-031	RAY 10	1003707-041
AGC Main DSKY	1003563-031	RAY 2, 6-9	1003563-041
AGC Nav DSKY	1003706-031	RAY 2, 3, 7, 8 9, and 10	1003706-041
Relay Module	1003824-011	See para VII, 1.5	1003824-011

IV. **PRIORITY CHANGES:**

None

V. **RELATED CHANGES:**

None

VI. **MATERIAL REQUIRED:**

1. One retrofit kit, part number 8104228, containing the following:

Item	Qty	Nomenclature	Part No.
a.	1	Retrofit Instruction Bulletin	0104117
b.	8	Washer, Silastic	1004917
c.	2	Vibration Pad	1004922-001

q.	4 oz.	Silicone Rubber Compound RTV-102	SCD 1006338-000
r.	4	Grounding Straps	1004920

3. Material required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	A/R	Chem-Stripper	N/A
b.	A/R	Cotton Swabs	N/A
c.	A/R	Isoprophyl Alcohol	TT-I-735
d.	A/R	Masking Tape, Low Tack	MM #213

4. Tools required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	1	Torque Wrench, 0-25 inch-pounds	N/A
b.	1	Stenciling tool, brush or air-operated equipment	N/A

5. Documents required but not supplied in kit:

Item	Nomenclature	Document No.
a.	Workmanship Standard	AC-STD-1, (3 Mar 64)
b.	Description and Requirements, Marking, General	ND 1002019
c.	AGC Main DSKY Assembly	1003707
d.	AGC Main DSKY Assembly	1003563
e.	AGC Nav DSKY Assembly	1003706
f.	Relay Module Assembly	1003824
g.	Sealing Requirements	ND 102187

VII. PROCEDURE:

NOTE: This portion (Section VII), of the retrofit is presented in seven paragraphs, specifically:

1. General Instructions
2. Relay Module Vibration
3. Nav DSKY Isolation
4. Nav DSKY Relay Modules Isolation
5. Main DSKY Isolation
6. Main DSKY Relay Modules Isolation
7. Nav and Main DSKY Vibration

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. Do not deviate from the procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard AC-STD-1, dated 3 March 1064.

1.4 Refer to documents listed in paragraph VI, part 5, for applicable ND specifications.

1.5 Serial number marked after retrofit shall be the same serial number as before retrofit.

2. Random vibration of the Relay Modules, part no. 1003824-011, is accomplished as follows:

2.1 Reference drawings 1003706, 1003563, and 1003707 and remove relay modules from their respective assemblies, i.e., Nav DSKY's and Main DSKY's.

WARNING:

Observe and comply with WARNING stenciled on side of Main DSKY's: "BEFORE REMOVING OR INSTALLING MODULES LOOSEN FOUR SCREWS MARKED A".

2.2 Clamp modules to the "sandwich fixture" and mount them to the head of the shaker. Perform random vibrations as follows simultaneously observing the Keyboard display to see if intermittent shorts are exhibited:

NOTE: Intermittent shorts indicate contamination particles which can cause relay failures.

2.2.1 Vibrate with relay headers up (non-operative) 0.5 g^2/HZ, 20 to 500 HZ, for two minutes.

2.2.2 Vibrate with relay headers down (operative) 1.0 g^2/HZ, 20 to 1000 HZ, for two minutes.

2.2.3 Vibrate with relay headers down (operative) 1.0 g^2/HZ, 20 to 500 HZ, for four minutes.

2.2.4 Vibrate with relay headers down (operative) 0.5 g^2/HZ, 20 to 500 HZ, for two minutes.

2.3 Utilize test modules as described in section VIII (step 1.3) of this RIB.

3. Retrofit Nav DSKY, part no. 1003706-031, using retrofit kit 8104228 as follows:

3.1 Reference drawing 1003706 and locate Alignment Pin Assembly, part no. 1003487-011.

3.2 Bond the vibration pad, part no. 1004918, provided in retrofit kit, to the Alignment Pin as shown on Figure 1. Bond per MIL-A-5092, Type II.

3.3 Retrieve from the retrofit kit, eight vibration washers, part no. 1004919-012. Install them to the mounting captive screws as follows:

3.3.1 Remove eight captive screws, part no. 1004545, and their flat washers, part no. MS15795-808, entirely from the front panel, part no. 1004874.

3.3.2 Fit one vibration washer over each screw leaving each flat washer in its original location abutting the screw head as shown in Figure 2.

3.4 Retrieve from the retrofit kit, four vibration pads of which two are part no. 1004922-002, and two are part no. 1004922-001. The former are for installation into the top half of the DSKY, the latter are for installation into the bottom half. Install as follows:

3.4.1 Install the two vibration pads, part no. 1004922-002, to the top half of the DSKY as shown in Figure 2, by bonding each strip with adhesive per MIL-A-5092, Type II.

3.4.2 Repeat step 3.4.1 for the bottom half of the DSKY using two vibration pads, part no. 1004922-001.

3.5 Reinstall the eight captive screws removed and retrofitted in step 3.3.

3.6 Reidentify the Nav DSKY, part no. 1003706-031, per the instructions contained in paragraph VIII of this RIB.

---

4. Retrofit (four) Relay Modules, part no. 1003824-011, contained in the Nav DSKY, part no. 1003706-031, using retrofit kit 8104228 as follows:

   4.1 Reference drawing 1003824. Locate two Stop Pins, part no. 1004540. Remove these pins and replace with new pin assembly per Figure 4 of this RIB.

   NOTE: The new pin assembly consists of Stop Pin (1004540), "O" Ring (NAS-1593-006), and Vibration Washer (1004917). The "O" Ring is sealed by a Resin (SCD-1010661) Catalyst (SCD-1010679) Mixture applied per ND 1002187, Type II.

   4.2 Remove socket screws, part no. MS35457-1, six places. Utilizing original washers, part no. NAS620-4, replace removed screws with screws, part no. MD35233-13, provided in kit. Torque 10 inch-pounds. Dispose of removed screws per paragraph IX of this RIB.

   4.3 Replace relay modules into DSKY. Remove shims, part no. 1004665, and replace them with rubber washers, part no. 1004917, provided in retrofit kit.

5. Retrofit the AGC Main DSKY, part no. 1003563-031 and part no. 1003707-031, using retrofit kit 8104229 as follows:

   5.1 Reference the applicable drawing (1003563 or 1003707) and remove the four captive screws, part no. 1004545, and four flat washers, part no. MS15795-808, from the front panel, part no. 1004682.

   5.2 Retrieve from retrofit kit four vibration isolators, part no. 1004921, four vibration washers, part number 1004919-002, and four ground straps, part number 1004920. Install the vibration washers to the screws as shown in Figure 3. Leave the flat washers in their original position abutting the screws heads.

   5.3 Reinstall the four captive screws and install the isolators and ground straps as shown in Figure 3.

   NOTE: Ground straps are wrapped around the isolators.

5.4 Reidentify the Main DSKY per the instructions contained in paragraph VIII of this RIB.

6. Retrofit the (four) Relay Modules, part no. 1003824-011 contained in the Main DSKY, using retrofit kit 8104229 as follows:

6.1 Reference drawing 1003824. Locate two Stop Pins, part no. 1004540. Remove these pins and replace with new pin assembly per Figure 4 of this RIB. Reference step 4.1 and repeat for this retrofit.

6.2 Remove socket screws, part no. MD35457-1, six places. Retaining washers, part no. NAS620-4, replace removed screws with screws, part no. MS35233-13, provided in kit. Dispose of removed screws per paragraph IX of this RIB.

6.3 Replace relay modules in DSKY. Remove shims, part no. 1004665, and replace them with rubber washers, part no. 1004917, provided in retrofit kit.

7. Vibrate each of the Nav and Main DSKY's as follows:

7.1 Utilize tested modules (from VII.2) and assemble them to the DSKY.

7.2 Subject the DSKY to the following random vibration profile for two minutes along each axis:

7.2.1 3db/OCT roll-up from 10 HZ to 62 HZ (.06 g^2/HZ).

7.2.2 .06 g^2/HZ from 62 HZ to 380 HZ.

7.2.3 3db/OCT roll-off from 380 HZ to 2000 HZ.

VIII. MODIFICATION DESIGNATION:

1. Main and Nav DSKY (all part nos. affected by this RIB) are to be marked as follows:

NOTE: Both kits contain a [illegible] stencil with the digits "0" through "9" for applying Position and Module Serial Number. Use masking tape, MM #213, a low tack masking tape, for masking off non-applicable digits.

1.1 Unmanned DSKY's shall be marked in the location indicated in Figure 4 using white ink, part no. 1006271-1, per ND 1002019, using stencil provided in kit:

"Relay Modules in this DSKY must be used in the following positions only -

Position	Module
D-	S/N
D-	S/N
D-	S/N
D-	S/N"

1.2 Manned DSKY's shall be similarly marked with the exception of the stenciled paragraph which will state:

"This DSKY contains the following relay modules"

1.3 The relationship of relay module usage and marking is defined as follows:

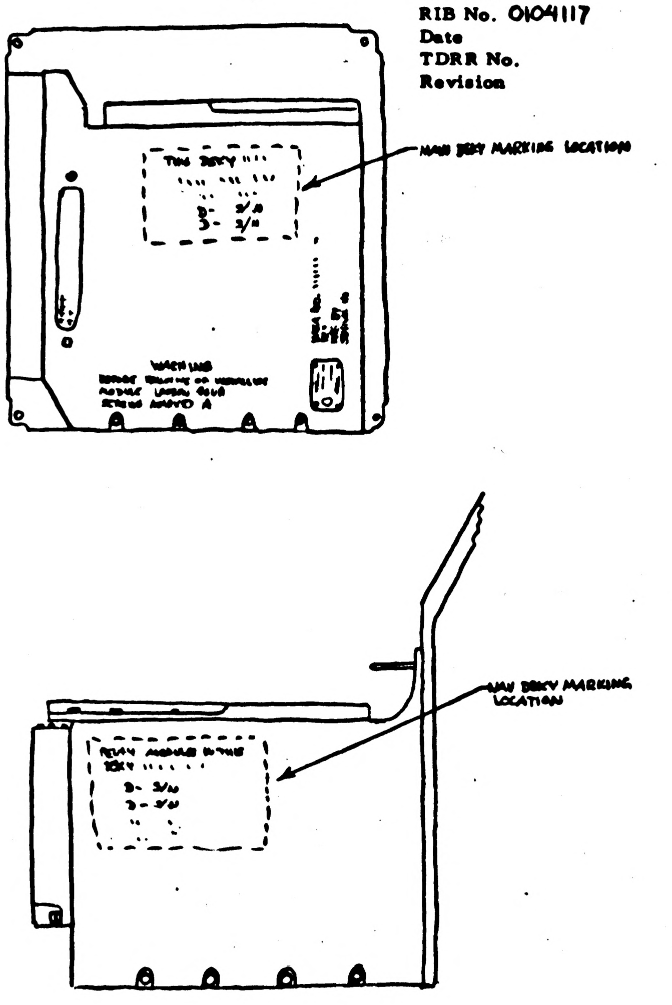

Figure 5. DSKY Marking (manned and unmanned).

1.3.1 Modules containing critical relays K37 through K42 which exhibited intermittent shorts may be used in DSKY's for both manned and unmanned flights provided they are used in positions where the failed relay is not wired in the DSKY circuit. These modules will be marked per Figure 4 and the following (stencil provided in kit):

"Use In
D-
Only"

1.3.2 All other modules which exhibit intermittent shorts in display shall be selectively used in DSKY's for unmanned flights only. Assign locations in which the failed relay is not wired into the DSKY harness. Mark as in step 1.3.1.

2. Reference drawing 1003707 and locate "-031" stenciled on AGC Main DSKY. Proceed as follows:

2.1 Using Chem-Stripper and cotton swabs, remove "-031".

2.2 Neutralize action of Chem-Stripper with Isoprophyl Alcohol and cotton swabs.

2.3 Using stencil provided in kit, white ink, and brush or air-operated equipment, stencil "-051" in the same location per ND 1002019.

3. Reference drawing 1003563 and locate "-031" stenciled on AGC Main DSKY. Proceed as in the same manner as steps 2.1 and 2.2, then, using stencil provided in kit, white ink, and brush or air-operated equipment, stencil "-041" in the same location per ND 1002019.

4. Reference drawing 1003824 and locate "-031" stenciled on AGC Nav DSKY. Proceed in the same manner as steps 2.1 and 2.2, then, using stencil provided in kit, white ink, and brush or air-operated equipment, stencil "-041" in the same location per MD 1002019.

IX. DISPOSITION OF REMOVED PARTS:

Scrap.

X. REPORT OF ACCOMPLISHMENT:

Complete AC Form 1 and Raytheon Form 53-9208 and return to applicable addresses.

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ________ Date: ________ G & N# ________

The following information must be submitted to Apollo Integrated Logistics Support, Dept. 38-05, AC Electronics, Milwaukee, upon the completion of any retrofit performed on Apollo GFP equipment or repair of Apollo Airborne GFP.

In Part I below, list all Apollo airborne GFP components that are repaired and all A/B and GSE MD symbols or P/N changes affecting subassembly and higher levels of equipment. List highest-to-lowest level of assembly order. All parts/assemblies added to or removed from airborne equipment shall be listed in Part II using the Part I Indent No. of the assembly affected as a cross reference.

PART I: A/B GSE BLACK BOXES/REPARABLE SUB-ASSEMBLIES AFFECTED

I. **PURPOSE:**

Changes to the Computer Test Set, part no. 2014042-061 modifying electrical functions in the Newspeak Program to enhance its diagnostic capability and aid in determining specific AGC restart problems. Changes to G&N Test Set, part no. 2014255-041, to reduce system noise.

II. **AUTHORITY:**

This retrofit is authorized by ECP - 0536, CCA 497-0518, and ECP-0674, CCA 497-533

III. **UNITS AFFECTED:**

Name	Part No.	Retrofit S/N's	New Part No.

VII **PROCEDURE**

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outline herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 March 1964.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable MD specifications.

1.5 Serial Number marked after retrofit shall be the same number as before retrofit.

2. Retrofit Computer Test Set, part number 2014042-061, using retrofit kit 8104238 as follows:

2.1 Remove the Computer Test Set nameplate located at the front center of the cabinet by filing off the heads of the drive screws. Drive the remaining portion of the drive screws into cabinet and dispose of nameplate per paragraph IX of this RIB.

2.2 Retrofit the Programmer and Monitor Assembly, part number 2014041-051, as follows:

2.2.1 Release the P & M Drawer Assembly and pull to slide lock position. Disconnect all connectors and grounding strap and remove drawer from cabinet.

2.2.2 Remove nameplate from side of P & M Drawer using a pocket knife. Dispose of nameplate per paragraph IX.

2.2.3 Remove excess adhesive using MEK and cotton swabs.

WARNING:

Methyl Ethyl Ketone is toxic and flammable. Use only in a well ventilated area and avoid open flame.

2.2.4 Lift Logic Plate Assembly No. 1 to the slide lock position and disconnect logic plate cable connectors. Remove plate from assembly.

2.2.5 Repeat step 2.2.4 for Logic Assembly No. 2 and No. 3.

2.2.6 Remove rear black protective cover from plate assemblies. Retain hardware.

2.2.7 Remove from kit (1) NOR Module (1014034), (2) lock washers (MS35338-79), (2) flat washers (1006997), (2) machine screws (MS51957-29), (2) program standoffs (1014212), and stencil marked "AC". Reference drawing 2014315 and proceed as follows:

2.2.7.1 Stencil "AC" at location A34 per MD 1002019.

2.2.7.2 Assemble NOR Module in location A34 with hardware from step 2.2.7 according to drawing 2014315.

11

NOTE: Step 2.2.7 applies to Logic Plate No. 2 only.

2.2.8 Using Wire wrap installation and removal tools, remove and add wire (1006945-1, blue) between the following pins on wirewrap plate of Logic Plate Assembly No. 2.

NOTE: Remove Z3 (top) level first, Z2 (middle) level second, Z1 (bottom) level last. Install Z1 (bottom) level first, Z2 level second, Z3 level last.

REMOVE

2.2.9.1 Solder capacitor (CY15C471J) (Ref. Designation C24) in position (From: A05-02, To A05-20).

2.2.9.2 Solder capacitor, C513BP105K (replaces C513AP010K) between pins B34-13 and B34-20.

2.2.10 Using wirewrap installing tools add wire (1C06945-1 blue) between the following pins on wirewrap plate of Logic Plate Assembly No.1.

NOTE: Reference notes in step 2.2.8.

ADD

FROM	TO	ZL	CKT. OR SIG.	CARD #
B1-19	B35-02	2	321-01	2272
B1-18	B35-19	2	322-01	2273

2.2.11 Remove stencil "-021" from part number on Logic Plate No. 1 using Chem-Stripper and cotton swabs as required.

2.2.12 Neutralize Chem-Stripper using isopropyl alcohol and cotton swabs as required.

2.2.13 Using stencil provided in kit, locate new stencil "-031" and mark using white ink and air brush or bursh per ND 1002019.

16

2.2.14 Remove stencil "-021" from part number on Logic Plate No. 2 using Chem-Stripper and cotton swabs as required.

2.2.15 Neutralize Chem-Stripper using isopropyl alcohol and cotton swabs as required.

2.2.16 Using stencil provided in kit, locate new stencil "-031" and mark using white ink and brush or brush per ND 1002019.

2.2.17 Repeat steps 2.2.14, 15, and 16 for Logic Plate No. 3 using stencil "-061" provided in kit.

2.2.18 Replace protective black cover using retained hardware and staking compound furnished in kit and re-mount Logic Plate Assembly No.1 onto support brackets in chassis. Attach cable connectors, lower the plate and secure.

2.2.19 Repeat step 2.2.18 for Logic Plate Assembly No. 2, and Logic Plate Assembly No. 3.

2.2.20 Refer to drawing 2014041. Bond nameplate (1004260-286), supplied in kit, to the indicated location on the P&M Drawer useing adhesive (MIL-A-5092, Type II) and cotton swabs.

2.2.21 Note serial number on nameplate removed in step 2.2.2. Stencil same number in appliable block on new nameplate using black ink and stencil, provided in kit, and air brush or brush per ND 1002019.

2.2.25 Remount P&M Drawer onto cabinet slides. Connect rear cable connectors, push unit into cabinet and secure in place using handle hardware.

2.3 Retrofit Logic Drawer No. 1, part number 2014036-041, using retrofit kit 8104238 as follows:

2.3.1 Release Logic Drawer Assembly No. 1 from cabinet. Disconnect rear cable connectors and remove unit from cabinet.

2.3.2 Remove nameplate on side of chassis useing a pocket knife and dispose of this nameplate per paragraph IX of this RIB.

2.3.3 Remove excess adhesive with Methyl Ethyl Ketone and cotton swabs.

WARNING:

Methyl Ethyl Ketone is toxic and flammable. Use only in a well ventilated area and avoid open flame.

2.3.4 Lift Logic Plate Assembly No. 4 to slide lock position and disconnect Logic Plate cable connectors. Remove Plate from unit.

2.3.5 Repeat step 2.3.4 for Logic Plate Assembly No. 5.

2.3.6 Pivot Front Panel of Logic Drawer into down position.

2.3.7 Release Interconnector Plate Assembly No. 6 and pivot into down position.

2.3.8 Remove all cable connectors from rear of Interconnection Plate Assembly.

2.3.9 Remove hardware securing Interconnection Plate Pivot bracket to bottom of unit chassis. Remove Interconnection Plate from unit and retain mounting hardware.

2.3.10 Remove rear black protective cover from Plate Assembly No. 4. Retain hardware for reassembly.

2.3.11 Repeat step 2.3.10 for Logic Plate Assembly No. 5.

2.3.12 Repeat step 2.3.10 Interconnection Plate Assembly No. 6.

2.3.13 Using wirewrap tools, add wire (1006945, blue) between the following pins on wirewrap plate for Logic Plate Assembly No. 4.

NOTE: Reference note in step 2.2.8.

ADD

20

2.3.16 Remove stenciled dash numbers from plates 4, 5, and 6 using cotton swabs and Chem-Stripper.

2.3.17 Neutralize the action of Chem-Stripper using cotton swabs and isoproply alcohol.

2.3.18 Stencil in new dash numbers using the stencil provided in kit, white ink and brush or air brush as follows:

2.3.18.1 Plate No. 4, 2014218-011 becomes -021.

2.3.18.2 Plate No. 5, 2014219-041 becomes -051.

2.3.18.3 Plate No. 6, 2014228-041 becomes -051.

2.3.19 Re-install black cover removed from Logic Plate Assembly No. 4 and secure using hardware retained from step 2.3.10, and staking compound furnished in kit.

2.3.20 Repeat step 2.3.19 for Logic Plate Assembly No.5.

2.3.21 Repeat step 2.3.19 for Interconnection Plate No. 6.

2.3.22 Re-mount Interconnection Plate Assembly No. 6 into chassis and assembly pivot brackets to bottom of chassis using retained hardware.

2.3.23 Reconnect all cable connectors to Interconnection Plate No. 6 and pivot into up position. Secure in plate.

2.3.24 Pivot Front Panel into up position and secure in place.

21

2.3.25 Re-mount Logic Plate Assembly No. 5 onto support brackets in chassis. Attach cable connectors, lower plate and secure in place.

2.3.26 Repeat step 2.3.25 for Logic Plate Assembly No. 4.

2.3.27 Refer to engineering drawing 2014036. Locate new nameplate (1004260-288), supplied in kit, on side of Logic Drawer No. 1. Bond using adhesive (MIL-A-5092, Type II) and cotton swabs.

2.3.28 Note serial number on nameplate removed in step 2.3.2. Stencil same number in the appropriate block on new nameplate using stencil provided in kit ("RAY" etc.), black ink and brush or air operated equipment.

2.3.29 Re-mount Logic Drawer Assembly No. 1 onto cabinet slides, connect rear cable connectors and grounding strap, push unit into cabinet and secure in place using handle hardware.

2.4 Retrofit the A18 Interconnection Plate Assembly, part no. 2014046-031, as follows:

2.4.1 Remove rear cover, between cabinet doors, by loosening screws. This exposes A18 Interconnection Plate wirewrap. Retain cover and mounting hardware.

2.4.2 Using wirewrap removal tools, remove wire from the following pins on wirewrap plate A2 of the A18 Interconnection Plate Assembly:

REMOVE

FROM	TO	ZL	CIRCUIT	CARD NO.
A2-07-04	A2-20-04	1	26-01	1024

ADD

FROM	TO	ZL	CIRCUIT	CARD NO.
A2-37-18	A2-11-18	2	111-01	2125
A2-10-18	A2-37-08	2	112-01	2126

2.4.3 Using wirewrap installation tools, add wire (1006945-1) between the following pins on the A18 Interconnection Plate Assembly.

ADD

FROM	TO	ZL	CIRCUIT	CARD NO.
A1-6-02	A2-24-05	3	516-01	H515
A2-8-14	A3-15-02	3	517-01	H516

2.4.4 Replace rear protective cover over A18 interconnection wirewrap pins, between rear doors, using retained hardware and cover from step 2.4.1.

2.4.5 Locate with aid of mirror part number "2014046-031" stenciled on the A18 Interconnection Plate Assembly. Remove the "2014046-031" using Chem-Stripper and Cotton swabs.

2.4.6 Neutralize the action of Chem-Stripper with isopropyl alcohol and cotton swabs.

2.4.7 Refer to eng.dwg.2014046 for part no. new stenciling location. Using stencil provided in kit, stencil "2014046-041" with black ink and brush or air-operated equipment per MD 1602019.

2.4.7.1 Remove hardware securing A18 (2014046) to cabinet. Retain hardware for reassembly.

2.4.7.2 Move A18 Assy so that part no.2014275-061 is visible.

23

Sheet 23 of [illegible]
RIB No. 0104124
Date
TDRR No.
Revision A-

2.4.8 Remove -061 using Chem-Stripper and cotton swabs.

2.4.9 Repeat steps 2.4.6 & 2.4.7 except new dash number to be -071.

2.4.10 Remount A18 Assembly using retain hardware.

2.5 Retrofit Logic Drawer No. 2, part number 2014037-041, using retrofit kit 8104238 as follows:

2.5.1 Release Logic Drawer Assembly No. 2 from cabinet. Disconnect rear cable connector and grounding strap and remove unit from cabinet.

2.5.2 Remove nameplate on side of chassis using a pocket knife and dispose of this nameplate per paragraph IX of this RIB.

2.5.3 Remove excess adhesive with Methyl Ethyl Ketone and cotton swabs.

WARNING:
Methyl Ethyl Ketone is toxic
and flammable. Use only in
a well ventilated area and
avoid open flame.

2.5.4 Remove Logic Plate Assembly No. 6 following the same procedures as described in steps 2.3.6 through 2.3.9, and then remove black cover (retain hardware).

2.5.5 Using wirewrap tools, add wire (1006945-1 blue) between the following pins on wirewrap plate for Logic Plate Assembly No. 6.

NOTE: Reference note in step 2.2.8.

FROM	TO	ZL	CKT. OR SIG.	CARD #
B5-19	B31-11	2	454-01	2221
B1-01	B31-13	2	455-01	2222
A30-11	B32-03	2	456-01	2223

2.5.6 Remove stenciled dash number "-021" from plate No. 6 using cotton swabs and Chem-Stripper.

2.5.7 Neutralize the action of Chem-Stripper using cotton swabs and isopropyl alcohol.

2.5.8 Stencil in new dash number "-031" using the stencil provided in kit, white ink and brush or air brush per ND 1002019.

2.5.9 Reinstall black cover, using retained hardware and staking compound supplied in kit.

2.5.10 Re-Mount Logic Plate Assembly No. 6 onto support brackets in Logic Drawer No. 2. Reinstall connectors and secure.

2.5.11 Remove Logic Plate Assembly No. 5 following same procedures as described in step 2.5.4.

2.5.12 Add wire as in step 2.5.5 to the following pins:

FROM	TO	ZL	CKT. OR SIG.	CARD #
B6-13	B31-06	2	90-02	2348
A1-11	B31-16	2	280-01	2349

2.5.13 Reidentify and reinstall same as steps 2.5.6 through 2.5.10.

2.5.14 Refer to engineering drawing 2014037. Locate new nameplate (1004260-290), supplied in kit, on side of Logic Drawer No. 2. Bond using adhesive (MIL-A-5092, Type II) and cotton swabs.

2.5.15 Note serial number on removed nameplate and stencil same number in the applicable block on new nameplate using stencil provided in kit ("RAY" etc.), black ink and brush or air operated equipment.

2.5.16 Re-mount Logic Drawer No. 2 into cabinet, connect rear cable connectors and grounding strap. Slide drawer in and secure.

[illegible]

3. Retrofit AGC/GSE Interconnection Set, G&N Test, part no 2014255-041, using retrofit kit 8104239 as follows:

3.1 Retrofit Self Test Assembly (2014392-021) as follows:

3.1.1 Remove Cover Assembly (2016495) from Housing (2014413) retaining hardware for reassembly.

3.1.2 Delete tabs (both sides) on the four (4) grommets on the Cover Assembly (tabs are deleted to make way for the installation of the standoffs).

3.1.3 Reference drawing 2016495 and drill four (4) holes in the Cover Assembly per the requirements of that drawing. Use a number 29 drill.

NOTE: Drilled holes will be utilized for the installation of the Standoffs (1015981-009) in a forthcoming step.

3.1.4 Remove burrs from drill holes, chromate and touch up with gray paint as defined in "Notes" of drawing 2016495.

3.1.5 Remove cable clamps and two bandmarkers (1006415-131 and P3/J6). Retain clamps and P3/J6 bandmarker (care should be taken in removal of P3/J6 bandmarker so that it may be reused). Scrap large bandmarker.

3.1.6 Remove zipper tubing, undo lacing, remove strain relief clamp and pull back bushing on P1 connector. Repeat this procedure for the P3 connector and leg.

3.1.7 Cut harness leads A3 through A17 (code identification) back on the P3 leg as close to the P3 connector as possible.

NOTE: Do not cut short as wires are to be re-routed (observe 2016497, sheet 1).

3.1.8 Remove connector pins with cut wires from P3 connector (reference step 3.1.7).

3.1.9 Remove from retrofit kit preassembled leads (white, no. 22 wire) identified by code identification A131 through A147. Install them into proper connector location as shown on drawing 2016497.

3.1.10 Route wires cut step 3.1.7 as shown on drawing 2016497, sheet 1.

3.1.11 Lace (temporary lacing) jumpers and wires in place.

3.1.12 Fabricate jumpers using electrical wire (QQ-W-343, type S, AWG 22, soft coated a) by cutting to length to fit the following:

FROM:	TO:
S1E-5	S1E-8
S1E-10	S1B-1

3.1.13 Sleeve (1006776-21) wire and solder to the above locations per ND1002071.

3.1.14 Remove pins "A" and "Z" from P1 connector (these are dummy pins) using applicable removal tool.

3.1.15 Using white wire (MIL-W-16878/4E22) and two crimp pins (MS3192A20A) provided in kit, fabricate a jumper by stripping wire ends 1/4-inch and crimp pins to wire per ND1002206.

3.1.16 Insert finished jumper into "A" and "Z" locations in P1 connector.

3.1.17 Install Standoffs (1015981-009), provided in kit, to holes drilled in cover (step 3.1.3) and then install Component Board Assembly (2016499), provided in kit, to the Standoffs as shown in drawing 2014392.

3.1.18 Measure, cut and trim unattached wires from P1 per the information chart, sheet 2 of 2016497, and solder per ND 1002071 to designated points on the Component Board just installed.

3.1.19 Repeat step 3.1.18 for P3 wires.

3.1.20 Permanently lace the harness per ND 1002032 and then install new zipper tubing (1006696-[illegible]) provided in kit, per the notes in drawing 2016497 using solvent.

3.1.21 Reinstall cable clamps removed in step 3.1.5 and the bandmarker (P3/J6), also retained from that step, and the new bandmarker (1006415-131) provided in kit.

3.1.22 Reassemble connector strain relief clamps and bushings (P1 and P3 connectors - see step 3.1.6).

3.1.23 Reinstall cover (removed step 3.1.1) into housing using retained hardware.

3.2 Reidentify the Self Test Assembly (2014392-021) by removing the nameplate with a pocket knife (do not mar finish) and proceeding as follows:

3.2.1 Remove all adhesive residue with Methyl Ethyl Ketone and cotton swabs.

WARNING:
MEK is flammable and toxic.
Use with adequate ventilation
and avoid open flame.

20

Sheet 28of 31
RIB No. 0104124
Date
TDRR No.
Revision —

3.2.2 Remove new nameplate (1004260-289) from kit and stencil same serial number per ND1002019 using black ink and brush or air-operated equipment.

3.2.3 Reference drawing 2014392 and install new nameplate per the notes on that drawing.

3.3 Retrofit Buffer Circuit Assembly, part no. 2014254-031, using retrofit kit 8104239 as follows:

3.3.1 Remove (2) covers (1020310) and retain covers and hardware for reassembly.

3.3.2 Reference drawings 2016500 and 2016501 and drill holes two places (located on the drawing by the 5.312 dimension). These holes will be used to install the W1 Bus Bar in a later step.

3.3.3 Using Heli-coil insertion tool, insert (2) Heli-coils into drill holes after they have been prepared (tapped) per requirements of drawings. Install per MS33646. Heli-coils are provided in kit.

3.3.4 Desolder from Component Board A4 nine (9) resistors which are identified as R1-1 through R1-9. Dispose of these resistors per paragraph IX of this RIB.

3.3.5 Remove from retrofit kit (9) resistors (1006750-16) (220 ohm) and solder these resistors to the same locations as those removed in step 3.3.4, soldering per ND 1002071.

3.3.6 Desolder from Conponent Board A3 (2014262-021) twenty-three (23) resistors which are identified as R1-1 through R1-8 and R1-23 through R1-27.

Sheet29 of 31
RIB No. 0104124
Date
TDRR No.
Revision A

3.3.7 Remove from retrofit kit twenty-three (23) resistors (1006750-16) (220 ohm) and solder these resistors to the same locations as those removed in step 3.3.6.

3.3.7.1 Locate "-021" stenciling on component board A3 and remove using Chem-Stripper and cotton swabs.

3.3.7.2 Neutralize Chem-Stripper and restencil "-031" using provided stencil and white ink per ND1002019.

3.3.8 Turn over the Buffer Circuit Assy and resolder any printed circuit terminals which may have been loosened up during performance of steps 3.3.4 through 3.3.7 to insure good electrical contact.

3.3.9 Remove retrofit kit the W1 Bus Bar and install it to the Buffer Circuit Assembly using screws (MS51957-16) and applicable washers, also supplied in kit. Reference drawing 2014254 for the placement of this bus bar.

3.3.10 Remove from retrofit kit the premarked jumper wires with attached terminal lugs.

3.3.11 Determine proper length of jumpers by referring to jumper list on drawing 2014254. Cut and trim each jumper to a length that will allow the jumper to be attached (soldered) to an "E" point and to the bus bar in the shortest possible distance.

NOTE: Retrofit personnel may prefer cutting and soldering one wire at a time rather than cutting all the wires and then soldering. It is arbitrary.

3.3.12 Solder respective jumpers to "E" points shown in jumper list, soldering per ND1002071. Remove screws retaining component Board A4 so that it may be turned over. Retain screws.

3.3.13 Attach jumpers to bus bar using hardware supplied in retrofit kit.

NOTE: There are fourteen (14) terminals on the bus bar. It will be necessary to double up jumpers at intervals.

Sheet 30 of 31
RIB No. 0104124
Date
TDRR No.
Revision A

3.3.14 Remove from retrofit kit one (1) orange wire (code identification H3) and one (1) black wire (code identification H23). Using crimping tool, crimp electrical contacts (MS3193A20A), also provided in kit, to these wires.

3.3.15 Unscrew J4 captive ring (inside of Buffer Circuit Assembly) and dislodge compressor ring. Slide both rings back over the harness.

NOTE: Contacts connot be inserted to connector unless pressure is relieved by performing step 3.3.15.

3.3.16 Insert wires from step 3.3.14 to J4 connector (through rings moved back in step 3.3.15 to locations "N" and "M" as follows:
H23 (black) to N
H3 (orange) to M

3.3.17 Solder the free end of the orange wire at A3-E99 (solder per ND 1002071).

3.3.18 Attach lug end of black wire to W1 bus bar.

3.3.19 Replace rings moved back in step 3.3.15.

3.3.20 Lace both wires to existing harness.

3.3.20.1 Locate "-031" stenciling on component board A4 and remove using Chem-Stripper and cotton swabs.

3.3.20.2 Neutralize Chem-Stripper and restencil "-041" using provided stencil and white ink per ND1002019.

3.3.21 Reinstall the Component Board A4 (2014267-041) to the Buffer Circuit Assembly using hardware retained from 3.3.12.

3.3.22 Reinstall the two covers removed in step 3.3.1 using covers and hardware retained from that step.

3.4 Reidentify the Buffer Circuit Assembly, part no. 2014254-031, by removing existing nameplate with a pocket knife (do not mar finish) and proceeding as follows:

Sheet 31 of 31
RIB No. 0104124
Date
TDRR No.
Revision A

3.4.1 Remove all adhesive residue with Methyl Ethyl Ketone and cotton swabs.

WARNING:
MEK is flammable and toxic.
Use with adequate ventilation
and avoid open flame.

3.4.2 Remove new nameplate (1004260-29?) from retrofit kit and install it to the same location using adhesive MIL-A-5092, Type II.

4. Retest Procedure. Retest to the following JDCs:

1) 05126
2) 05451
3) 05143
4) 05144
5) 05172
6) 05153
7) 05154
8) 05155
9) 05156
10) 05160
11) 05161
12) 05162
13) 05450
14) 05453

VIII. **MODIFICATION DESIGNATION:**

1. Remove from kit 8104238 nameplate, part no. 1004260-287, and, using stencil provided in kit, stencil serial number with black ink and brush or air-operated equipment.

NOTE: Same serial number as removed nameplate.

2. Using button head drive screws, part no. AN 535-4-4, supplied in kit 8104238, secure the nameplate to the Computer Test Set in the same location as nameplate removed in step 2.1.

IX. **DISPOSITION OF REMOVED PARTS:**

Scrap all removed parts.

X. **REPORT OF ACCOMPLISHMENT:**

Complete AC Form 1 and Raytheon Form 53-9208 and return to applicable addressees.

I. **PURPOSE:**

Changes to the Computer Test Set, part no. 201402-061, modifying electrical functions in the Newspeak Program to enhance its diagnostic capability and aid in determining specific AGC restart problems. Changes to G&N Test Set, part no. 2014255-041, to reduce system noise.

II. **AUTHORITY:**

This retrofit is authorized by ECP - 0536, CCA 497-0518, and ECP-0674, CCA 497-533

III. **UNITS AFFECTED:**

VII **PROCEDURE**

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outline herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 March 1964.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

1.5 Serial Number marked after retrofit shall be the same number as before retrofit.

2. Retrofit Computer Test Set, part number 2014042-061, using retrofit kit 8104238 as follows:

2.1 Remove the Computer Test Set nameplate located at

---

the front center of the cabinet by filing off the heads of the drive screws. Drive the remaining portion of the drive screws into cabinet and dispose of nameplate per paragraph IX of this RIB.

2.2 Retrofit the Programmer and Monitor Assembly, part number 2014041-051, as follows:

2.2.1 Release the P & M Drawer Assembly and pull to slide lock position. Disconnect all connectors and grounding strap and remove drawer from cabinet.

2.2.2 Remove nameplate from side of P & M Drawer using a pocket knife. Dispose of nameplate per paragraph IX.

2.2.3 Remove excess adhesive using MEK and cotton swabs.

WARNING:

Methyl Ethyl Ketone is toxic and flammable. Use only in a well ventilated area and avoid open flame.

2.2.4 Lift Logic Plate Assembly No. 1 to the slide lock position and disconnect logic plate cable connectors. Remove plate from assembly.

2.2.5 Repeat step 2.2.4 for Logic Assembly No. 2 and No. 3.

2.2.6 Remove rear black protective cover from plate assemblies. Retain hardware.

2.2.7 Remove from kit (1) NOR Module (1014034), (2) lock washers (MS35338-79), (2) flat washers (1006997), (2) machine screws (MS51957-29), (2) program standoffs (1014212), and stencil marked "AC". Reference drawing 2014315 and proceed as follows:

2.2.7.1 Stencil "AC" at location A34 per ND 1002019.

2.2.7.2 Assemble NOR Module in location A34 with hardware from step 2.2.7 according to drawing 2014315.

NOTE: Step 2.2.7 applies to Logic Plate No. 2 only.

2.2.8 Using Wire wrap installation and removal tools, remove and add wire (1006945-1, blue) between the following pins on wirewrap plate of Logic Plate Assembly No. 2.

NOTE: Remove Z3 (top) level first, Z2 (middle) level second, Z1 (bottom) level last. Install Z1 (bottom) level first, Z2 level second, Z3 level last.

REMOVE

2.2.9.1 Solder capacitor (CY15C471J) (Ref. Designation C24) in position (From: A05-02, To A05-20).

2.2.9.2 Solder capacitor (CS13AF010K) between pins B34-13 and B34-20.

2.2.10 Using wirewrap installing tools add wire (1006934-1 blue) between the following pins on wirewrap plate of Logic Plate Assembly No.1.

NOTE: Reference notes in step 2.2.8.

ADD

FROM	TO	ZL	CKT. OR SIG.	CARD #
B1-19	B35-02	2	321-01	2272
B1-18	B35-19	2	322-01	2273

2.2.11 Remove stencil "-021" from part number on Logic Plate No. 1 using Chem-Stripper and cotton swabs as required.

2.2.12 Neutralize Chem-Stripper using isopropyl alcohol and cotton swabs as required.

2.2.13 Using stencil provided in kit, locate new stencil "-031" and mark using white ink and air brush or bursh per ND 1002019.

2.2.14 Remove stencil "-021" from part number on Logic Plate No. 2 using Chem-Stripper and cotton swabs as required.

2.2.15 Neutralize Chem-Stripper using isopropyl alcohol and cotton swabs as required.

2.2.16 Using stencil provided in kit, locate new stencil "-031" and mark using white ink and brush or brush per ND 1002019.

2.2.17 Repeat steps 2.2.14, 15, and 16 for Logic Plate No. 3 using stencil "-061" provided in kit.

2.2.18 Replace protective black cover using retained hardware and staking compound furnished in kit and re-mount Logic Plate Assembly No.1 onto support brackets in chassis. Attach cable connectors, lower the plate and secure.

2.2.19 Repeat step 2.2.18 for Logic Plate Assembly No. 2, and Logic Plate Assembly No. 3.

2.2.20 Refer to drawing 2014041. Bond nameplate (1004260-286), supplied in kit, to the indicated location on the P&M Drawer useing adhesive (MIL-A-5092, Type II) and cotton swabs.

2.2.21 Note serial number on nameplate removed in step 2.2.2. Stencil same number in applicable block on new nameplate using black ink and stencil, provided in kit, and air brush or brush per ND 1002019.

2.2.25 Remount P&M Drawer onto cabinet slides. Connect rear cable connectors, push unit into cabinet and secure in place using handle hardware.

2.3 Retrofit Logic Drawer No. 1, part number 2014036-041, using retrofit kit 8104238 as follows:

2.3.1 Release Logic Drawer Assembly No. 1 from cabinet. Disconnect rear cable connectors and remove unit from cabinet.

2.3.2 Remove nameplate on side of chassis useing a pocket knife and dispose of this nameplate per paragraph IX of this RIB.

2.3.3 Remove excess adhesive with Methyl Ethyl Ketone and cotton swabs.

WARNING:

Methyl Ethyl Ketone is toxic and flammable. Use only in a well ventilated area and avoid open flame.

2.3.4 Lift Logic Plate Assembly No. 4 to slide lock position and disconnect Logic Plate cable connectors. Remove Plate from unit.

2.3.5 Repeat step 2.3.4 for Logic Plate Assembly No. 5.

2.3.6 Pivot Front Panel of Logic Drawer into down position.

2.3.7 Release Interconnector Plate Assembly No. 6 and pivot into down position.

2.3.8 Remove all cable connectors from rear of Interconnection Plate Assembly.

2.3.9 Remove hardware securing Interconnection Plate Pivot bracket to bottom of unit chassis. Remove Interconnection Plate from unit and retain mounting hardware.

2.3.10 Remove rear black protective cover from Plate Assembly No. 4. Retain hardware for reassembly.

2.3.11 Repeat step 2.3.10 for Logic Plate Assembly No. 5.

2.3.12 Repeat step 2.3.10 Interconnection Plate Assembly No. 6.

2.3.13 Using wirewrap tools, add wire (1006945, blue) between the following pins on wirewrap plate for Logic Plate Assembly No. 4.

NOTE: Reference note in step 2.2.8.

2.3.15 Using wirewrap tools, add wirewrap wire (1006945, blue) between the following pins on wirewrap plate for Interconnection Plate No. 6. REFERENCE NOTE IN STEP 2.2.8.

FROM	TO	ZL	CKT. OR SIG.	CARD #
B1-11	A32-01	2	439-01	2254
A32-12	A26-11	2	440-01	2255
A26-11	B1-12	3	440-02	3058
B16-09	A32-18	2	441-01	2256

2.3.16 Remove stenciled dash numbers from plates 4, 5, and 6 using cotton swabs and Chem-Stripper.

2.3.17 Neutralize the action of Chem-Stripper using cotton swabs and isoproply alcohol.

2.3.18 Stencil in new dash numbers using the stencil provided in kit, white ink and brush or air brush as follows:

2.3.18.1 Plate No. 4, 2014218-011 becomes -021.

2.3.18.2 Plate No. 5, 2014219-041 becomes -051.

2.3.18.3 Plate No. 6, 2014228-041 becomes -051.

2.3.19 Re-install black cover removed from Logic Plate Assembly No. 4 and secure using hardware retained from step 2.3.10, and staking compound furnished in kit.

2.3.20 Repeat step 2.3.19 for Logic Plate Assembly No.5.

2.3.21 Repeat step 2.3.19 for Interconnection Plate No. 6.

2.3.22 Re-mount Interconnection Plate Assembly No. 6 into chassis and assembly pivot brackets to bottom of chassis using retained hardware.

2.3.23 Reconnect all cable connectors to Interconnection Plate No. 6 and pivot into up position. Secure in plate.

2.3.24 Pivot Front Panel into up position and secure in place.

2.3.25 Re-mount Logic Plate Assembly No. 5 onto support brackets in chassis. Attach cable connectors, lower plate and secure in place.

2.3.26 Repeat step 2.3.25 for Logic Plate Assembly No. 4.

2.3.27 Refer to engineering drawing 2014036. Locate new nameplate (1004260-288), supplied in kit, on side of Logic Drawer No. 1. Bond using adhesive (MIL-A-5092, Type II) and cotton swabs.

2.3.28 Note serial number on nameplate removed in step 2.3.2. Stencil same number in the appropriate block on new nameplate using stencil provided in kit ("RAY" etc.), black ink and brush or air operated equipment.

2.3.29 Re-mount Logic Drawer Assembly No. 1 onto cabinet slides, connect rear cable connectors and grounding strap, push unit into cabinet and secure in place using handle hardware.

2.4 Retrofit the A18 Interconnection Plate Assembly, part no. 2014046-031, as follows:

2.4.1 Remove rear cover, between cabinet doors, by loosening screws. This exposes A18 Interconnection Plate wirewrap. Retain cover and mounting hardware.

2.4.2 Using wirewrap removal tools, remove wire from the following pins on wirewrap plate A2 of the A18 Interconnection Plate Assembly:

REMOVE

FROM	TO	ZL	CIRCUIT	CARD NO.
A2-07-04	A2-20-04	1	26-01	1024

ADD

FROM	TO	ZL	CIRCUIT	CARD NO.
A2-37-18	A2-11-18	2	111-01	2125
A2-10-18	A2-37-08	2	112-01	2126

2.4.3 Using wirewrap installation tools, add wire (1006271-1) between the following pins on the A18 Interconnection Plate Assembly.

ADD

FROM	TO	ZL	CIRCUIT	CARD NO.
A1-6-02	A2-24-05	3	516-01	H515
A2-8-14	A3-15-02	3	517-01	H516

2.4.4 Replace rear protective cover over A18 interconnection wirewrap pins, between rear doors, using retained hardware and cover from step 2.4.1.

2.4.5 Locate with aid of mirror part number "2014046-031" stenciled on the A18 Interconnection Plate Assembly. Remove the "031" using Chem-Stripper and Cotton swabs.

2.4.6 Neutralize the action of Chem-Stripper with isopropyl alcohol and cotton swabs.

2.4.7 Using stencil provided in kit, stencil "041" with white ink and brush or air-operated equipment per ND 1002019.

2.4.8 With aid of mirror, locate part number "2014875-061" on bottom of A18 Connector Plate. Remove -061 using Chem-Stripper and cotton swabs.

2.4.9 Repeat steps 2.4.6 & 2.4.7. except new dash number to be -071.

2.5 Retrofit Logic Drawer No. 2, part number 2014037-041, using retrofit kit 8104238 as follows:

2.5.1 Release Logic Drawer Assembly No. 2 from cabinet. Disconnect rear cable connector and grounding strap and remove unit from cabinet.

2.5.2 Remove nameplate on side of chassis using a pocket knife and dispose of this nameplate per paragraph IX of this RIB.

2.5.3 Remove excess adhesive with Methyl Ethyl Ketone and cotton swabs.

WARNING:
Methyl Ethyl Ketone is toxic
and flammable. Use only in
a well ventilated area and
avoid open flame.

2.5.4 Remove Logic Plate Assembly No. 6 following the same procedures as described in steps 2.3.6 through 2.3.9, and then remove black cover (retain hardware).

2.5.5 Using wirewrap tools, add wire (1006945, blue) between the following pins on wirewrap plate for Logic Plate Assembly No. 6.

NOTE: Reference note in step 2.2.8.

FROM	TO	ZL	CKT. OR SIG.	CARD #
B5-19	B31-11	2	454-01	2221
B1-01	B31-13	2	455-01	2222
A30-11	B32-03	2	456-01	2223

2.5.6 Remove stenciled dash number "-021" from plate No. 6 using cotton swabs and Chem-Stripper.

2.5.7 Neutralize the action of Chem-Stripper using cotton swabs and isopropyl alcohol.

2.5.8 Stencil in new dash number "-031" using the stencil provided in kit, white ink and brush or air brush per ND 1002019.

2.5.9 Reinstall black cover, using retained hardware and staking compound supplied in kit.

2.5.10 Re-Mount Logic Plate Assembly No. 6 onto support brackets in Logic Drawer No. 2. Reinstall connectors and secure.

2.5.11 Remove Logic Plate Assembly No. 5 following same procedures as described in step 2.5.4.

2.5.12 Add wire as in step 2.5.5 to the following pins:

FROM	TO	ZL	CKT. OR SIG.	CARD #
B6-13	B31-06	2	90-02	2348
A1-11	B31-16	2	280-01	2349

2.5.13 Reidentify and reinstall same as steps 2.5.6 through 2.5.10.

2.5.14 Refer to engineering drawing 2014037. Locate new nameplate (1004260-290), supplied in kit, on side of Logic Drawer No. 2. Bond using adhesive (MIL-A-5092, Type II) and cotton swabs.

2.5.15 Note serial number on removed nameplate and stencil same number in the applicable block on new nameplate using stencil provided in kit ("RAY" etc.), black ink and brush or air operated equipment.

2.5.16 Re-mount Logic Drawer No. 2 into cabinet, connect rear cable connectors and grounding strap. Slide drawer in and secure.

2.6 Retrofit Self Test Assembly from part number [illegible]-041 to an -051 configuration by replacing existing nameplate with nameplate ([illegible]-2[illegible]) provided in retrofit kit 8[illegible]. Perform the changes in steps [illegible], [illegible], 2.4.1[illegible] and 2.5.18. Reference drawing [illegible]

3. Retrofit AGC/GSE Interconnection Set, G&N Test, part no 2014255-041, using retrofit kit 8104239 as follows:

3.1 Retrofit Self Test Assembly (2014392-021) as follows:

3.1.1 Remove Cover Assembly (2016495) from Housing (2014413) retaining hardware for reassembly.

3.1.2 Delete tabs (both sides) on the four (4) grommets on the Cover Assembly (tabs are deleted to make way for the installation of the standoffs).

3.1.3 Reference drawing 2016495 and drill four (4) holes in the Cover Assembly per the requirements of that drawing. Use a number 29 drill.

NOTE: Drilled holes will be utilized for the installation of the Standoffs (1015981-009) in a forthcoming step.

3.1.4 Remove burrs from drill holes, chromate and touch up with gray paint as defined in "Notes" of drawing 2016495.

3.1.5 Remove cable clamps and two bandmarkers (1006415-131 and P3/J6). Retain clamps and P3/J6 bandmarker (care should be taken in removal of P3/J6 bandmarker so that it may be reused). Scrap large bandmarker.

3.1.6 Remove zipper tubing, undo lacing, remove strain relief clamp and pull back bushing on P1 connector. Repeat this procedure for the P3 connector and leg.

3.1.7 Cut harness leads A3 through A17 (code identification) back on the P3 leg as close to the P3 connector as possible.

NOTE: Do not cut short as wires are to be re-routed (observe 2016497, sheet 1).

3.1.8 Remove connector pins with cut wires from P3 connector (reference step 3.1.7).

3.1.9 Remove from retrofit kit preassembled leads (white, no. 22 wire) identified by code identification A131 through A147. Install them into proper connector location as shown on drawing 2016497.

3.1.10 Route wires cut step 3.1.7 as shown on drawing 2016497, sheet 1.

3.1.11 Lace (temporary lacing) jumpers and wires in place.

3.1.12 Fabricate jumpers using electrical wire (QQ-W-343, type S, AWG 22, soft coated a) by cutting to length to fit the following:

FROM:	**TO:**
S1E-5	S1E-8
S1E-10	S1B-1

3.1.13 Sleeve (1006776-21) wire and solder to the above locations per ND1002071.

3.1.14 Remove pins "A" and "Z" from P1 connector (these are dummy pins) using applicable removal tool.

3.1.15 Using white wire (MIL-W-16878/4E22) and two crimp pins (MS3192A20A), provided in kit, fabricate a jumper by stripping wire ends 1/4-inch and crimp pins to wire per ND1002206.

3.1.16 Insert finished jumper into "A" and "Z" locations in P1 connector.

3.1.17 Install Standoffs (1015981-009), provided in kit, to holes drilled in cover (step 3.1.3) and then install Component Board Assembly (2016499), provided in kit, to the Standoffs as shown in drawing 2014392.

3.1.18 Measure, cut and trim unattached wires from P1 per the information chart, sheet 2 of 2016497, and solder per ND 1002071 to designated points on the Component Board just installed.

3.1.19 Repeat step 3.1.18 for P3 wires.

3.1.20 Permanently lace the harness per ND 1002032 and then install new zipper tubing (1006696-2), provided in kit, per the notes in drawing 2016497 using solvent.

3.1.21 Reinstall cable clamps removed in step 3.1.5 and the bandmarker (P3/J6), also retained from that step, and the new bandmarker (1006415-131) provided in kit.

3.1.22 Reassemble connector strain relief clamps and bushings (P1 and P3 connectors - see step 3.1.6).

3.1.23 Reinstall cover (removed step 3.1.1) into housing using retained hardware.

3.2 Reidentify the Self Test Assembly (2014392-021) by removing the nameplate with a pocket knife (do not mar finish) and proceeding as follows:

3.2.1 Remove all adhesive residue with Methyl Ethyl Ketone and cotton swabs.

WARNING:
MEK is flammable and toxic.
Use with adequate ventilation
and avoid open flame.

3.2.2 Remove new nameplate (1004260-289) from kit and stencil same serial number per ND1002019 using black ink and brush or air-operated equipment.

3.2.3 Reference drawing 2014392 and install new nameplate per the notes on that drawing.

3.3 Retrofit Buffer Circuit Assembly, part no. 2014254-031, using retrofit kit 8104239 as follows:

3.3.1 Remove (2) covers (1020310) and retain covers and hardware for reassembly.

3.3.2 Reference drawings 2016500 and 2016501 and drill holes two places (located on the drawing by the 5.312 dimension). These holes will be used to install the W1 Bus Bar in a later step.

3.3.3 Using Heli-coil insertion tool, insert (2) Heli-coils into drill holes after they have been prepared (tapped) per requirements of drawings. Install per MS33646. Heli-coils are provided in kit.

3.3.4 Desolder from Component Board A4 nine (9) resistors which are identified as R1-1 through R1-9. Dispose of these resistors per paragraph IX of this RIB.

3.3.5 Remove from retrofit kit (9) resistors (1006750-16) (220 ohm) and solder these resistors to the same locations as those removed in step 3.3.4, soldering per ND 1002071.

3.3.6 Desolder from Conponent Board A3 (2014262-021) twenty-three (23) resistors which are identified as R1-1 through R1-18 and R1-23 through R1-27.

3.3.7 Remove from retrofit kit twenty-three (23) resistors (1006750-16) (220 ohm) and solder these resistors to the same locations as those removed in step 3.3.6.

3.3.8 Turn over the BUFFER CIRCUIT ASSY and resolder any printed circuit terminals which may have been loosened up during performance of steps 3.3.4 through 3.3.7 to insure good electrical contact.

3.3.9 Remove from retrofit kit the W1 Bus Bar and install it to the Buffer Circuit Assembly using screws (MS35335-58) and applicable washers, also supplied in kit. Reference drawing 2014254 for the placement of this bus bar.

3.3.10 Remove from retrofit kit the premarked jumper wires with attached terminal lugs.

3.3.11 Determine proper length of jumpers by referring to jumper list on drawing 2014254. Cut and trim each jumper to a length that will allow the jumper to be attached (soldered) to an "E" point and to the bus bar in the shortest possible distance.

NOTE: Retrofit personnel may prefer cutting and soldering one wire at a time rather than cutting all the wires and then soldering. It is arbitrary.

3.3.12 Solder respective jumpers to "E" points shown in jumper list, soldering per ND1002071. Remove screws retaining component Board A4 so that it may be turned over. Retain screws.

3.3.13 Attach jumpers to bus bar using hardware supplied in retrofit kit.

NOTE: There are fourteen (14) terminals on the bus bar. It will be necessary to double up jumpers at intervals.

3.3.14 Remove from retrofit kit one (1) orange wire (code identification H3) and one (1) black wire (code identification H23). Using crimping tool, crimp electrical contacts (MS3193A20A), also provided in kit, to these wires.

3.3.15 Unscrew J4 captive ring (inside of Buffer Circuit Assembly) and dislodge compressor ring. Slide both rings back over the harness.

NOTE: Contacts cannot be inserted to connector unless pressure is relieved by performing step 3.3.15.

3.3.16 Insert wires from step 3.3.14 to J4 connector (through rings moved back in step 3.3.15) to locations "N" and "M" as follows:

H23 (black) to N
H3 (orange) to M

3.3.17 Solder the free end of the orange wire at A3-E99 (solder per ND 1002071).

3.3.18 Attach lug end of black wire to W1 bus bar.

3.3.19 Replace rings moved back in step 3.3.15.

3.3.20 Lace both wires to existing harness.

3.3.21 Reinstall the Component Board A4 to the Buffer Circuit Assembly using hardware retained from 3.3.12.

3.3.22 Reinstall the two covers removed in step 3.3.1, using covers and hardware retained from that step.

3.4 Reidentify the Buffer Circuit Assembly, part no. 2014254-031, by removing existing nameplate with a pocket knife (do not mar finish) and proceeding as follows:

3.4.1 Remove all adhesive residue with Methyl Ethyl Ketone and cotton swabs.

WARNING:
MEK is flammable and toxic.
Use with adequate ventilation
and avoid open flame.

3.4.2 Remove new nameplate (1004260-29f) from retrofit kit and install it to the same location using adhesive MIL-A-5092, Type II.

4. Retest Procedure. Retest to the following JDCs:

1) 05451 Rev B
2) 05143 Rev B
3) 05144 Rev C
4) 05172 Rev A
5) 05153 Rev D
6) 05154 Rev D
7) 05155 Rev C
8) 05156 Rev C
9) 05160 Rev D
10) 05161 Rev E
11) 05162 Rev C
12) 05450 Rev B
13) 05453 Rev D

VIII. MODIFICATION DESIGNATION:

1. Remove from kit 8104238 nameplate, part no. 1004260-287, and, using stencil provided in kit, stencil serial number with black ink and brush or air-operated equipment.

NOTE: Same serial number as removed nameplate.

2. Using button head drive screws, part no. AN 535-4-4, supplied in kit 8104238, secure the nameplate to the Computer Test Set in the same location as nameplate removed in step 2.1.

IX. DISPOSITION OF REMOVED PARTS:

Scrap all removed parts.

X. REPORT OF ACCOMPLISHMENT:

Complete AC Form 1 (page 31a of this RIB) and Raytheon Form 53-9208 and return to applicable addressees.

NOTE TO [illegible]: Do not remove Attachment A. It is a contract requirement that Raytheon maintain an up-to-date record of equipment status and it is through the utilization of Raytheon Form 53-[illegible] that this requirement is fulfilled.

I. **PURPOSE:**

Retrofit instructions for the removal and replacement of the Alarm Indicator and the nineteen Engraved Caps contained within the AGC DSKY, part number 2003994-011, 2003950-011, and 2003985-051, in order to comply with the requirements of MSC-A-66-3, Revision A (dated 5 June 1967), under Catagory B, non-metallic materials. This RIB also contains instructions for the removal and replacement of the Cap Housing Assembly and its spring with a new and improved design.

II. **AUTHORITY:**

This retrofit is authorized by ECP 641 CCA 497-0500

III. **UNITS AFFECTED:**

Name	Part No.	Serial No.	New Part No.
AGC DSKY	2003994-011	D3, D4, D7-D43	2003994-021
AGC DSKY	2003950-011	RAY 28, RAY 30	2003950-031
AGC DSKY	2003985-051	RAY 13	2003985-061

IV. **PRIORITY CHANGES:**

None.

V. **RELATED CHANGES:**

None.

VI. **MATERIAL REQUIRED:**

1. One retrofit kit, part number 8104241, containg the following:

Item	Qty	Nomenclature	Part No.
a.	1	Retrofit Instruction Bulletin	0104126
b.	19	Cap, Nomenclature	1005022
c.	1	IL/Cover Assembly	2003899-011

Item	Qty	Nomenclature	Part No.
d.	1	Nameplate	1004260-20
e.	19	"O" Ring	1006369
f.	38	Set Screw	AN565DC4H3
g.	1	Front Cover	2004739-[illegible]
h.	19	Cap Housing Assembly	2004738-011
i.	4	Screw, pan head, cross recessed	MS35216-1
j.	38	Spring, Cap Retaining	2004944
k.	4 oz	Silicone Compound	MIL-S-8660

2. Material required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	A/R	Sealing Compound	MIL-S-22473, Grade HV
b.	A/R	Freon TF	N/A
c.	A/R	Silicone Compound	1006879
d.	1	Foam rubber pad (approx. 1" thick)	N/A
e.	A/R	Toothpicks	N/A
f.	A/R	Cotton Swabs	N/A

3. Tools required but not supplied in kit:

NOTE: The tools required as specified herein are necessary for the retrofit, i.e., "or equivalent" does not apply to this listing.

Item	Qty	Nomenclature	Part No.
a.	1	Assembly Tool	AT-EX-A-22378
b.	1	Torque Tool Adapter	AT-EX-A22419
c.	1	Torque Adapter	AT-EX-A-22174
d.	1	"Jomite 5A" Torque Wrench	AT-EX-A21560
e.	2	Left Hand Twist Drill	Size #49
f.	2	Left Hand Twist Drill	Size #50
g.	2	Left Hand Twist Drill	Size #51
h.	6	.050-inch Hex Broaches	N/A
i.	1	Starrett Pin Vise (to .080-inch)	#162-B
j.	3	Plastic Shim Stock (.005-inch thick by 2-inch long)	"Artus"
k.	1 box	.050-inch Hex Keys (Short Arm) SP6 "Unbrako"	33-2
l.	1	0-100 inch-ounce Torque Wrench	N/A
m.	1	0-38 (or) 0-50 inch-pound Torque Wrench	N/A
n.	1	Marking Press	"NBR-ALL"

4. Documents required but not supplied in kit:

Item	Nomenclature	Document No.
a.	Workmanship Standard	AC-STD-1(3Mar64)
b.	AGC DSKY Assembly Drawing	2003994
c.	Front Housing Assembly Drawing	2003949
d.	Pushbutton Switch Assembly Drawing	2003896
e.	Interconnection Diagram	2005954
f.	Procurement Specification	PS 2003994

Item	Nomenclature	Document No.
g.	Alarm Indicator Drawing	2003899
h.	Nomenclature Cap Assembly Drawing	1005022
i.	General Specifications, Marking	ND 1002019
j.	Serialization	ND 1002023
k.	Packing and Shipping	ND 1002214

VII. PROCEDURE:

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 Mar. 1964.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

1.5 Serial numbers of equipment affected by this retrofit are not changed by this retrofit.

2. Retrofit the AGC DSKY using retrofit kit 8104241 as follows:

NOTE: The following DSKY part Numbers are applicable:

2003994-011
2003950-011
2003985-051

2.1 Remove the AGC DSKY from the Handling Fixture, part no. 2001413, referencing Figure 1, according to the following procedure:

NOTE: White gloves or finger cots should be worn during retrofit for protection of equipment.

2.1.1 Remove the eight flat head screws (MS511960-66), eight flat washers (MS15795-808), eight lock washers (MS35650-104) which mount the Handling Fixture Panel (2014009) and remove the panel. Retain panel and hardware for reassembly.

2.1.2 Remove the eight pan head screws (MS351958-62), eight lock washers (MS35337-81), and eight flat washers (MS15795-808) located on the sides of the DSKY Cage (2014008) and remove the cage. Retain cage and hardware for reassembly.

2.1.3 Remove the eight pan head screws (MS51958-61) and eight flat washers (MS15795-808) that mount the DSKY Mounting Brackets (2014009) to the DSKY and remove the mounting brackets. Retain brackets and hardware for reassembly.

2.2 Insure that the Protective Cap (1006425) is in place on the J9 connector of the DSKY.

2.3 Place the DSKY face up (indicator lights side) on a foam rubber pad.

2.4 Reference Figure 2 and remove the eight socket head screws (1001489-59) and the eight flat washers (NAS-620C6), that mount the Front Cover (2004929-021) to the DSKY. Retain hardware for reassembly.

2.5 Remove the Front Cover from the DSKY by lifting up (slowly) while keeping the cover parallel to the front housing surfaces. Dispose of cover per paragraph IX of this RIB.

2.6 Clean the area of the pushbutton switch assemblies and the indicator assemblies to insure that the surfaces are free of dust and foreign matter. Use Freon TF and cotton swabs for cleaning. Do not touch IL/EL faces.

2.7 Study Figure 3 to familiarize yourself with the general construction and assembly of the pushbutton switch assemblies before proceeding.

2.8 Remove the Engraved Cap (1006353) from the pushbutton switch assembly by depressing the Cap R-taining Spring (2004944) with a toothpick inserted through the slot in the Housing Assembly (2003926) as illustrated in Figure 4. Repeat this procedure for each of the nineteen assemblies. Dispose of caps and springs per paragraph IX of this RIB.

2.9 Remove the two set screws (AN565DC4113), one Cap Housing Assembly (2003926-011), one Shaft Assembly, (2003975-011), and one Compression Spring (2004941) from each of the 19 pushbutton switch assemblies as follows:

CAUTION

Do not disturb or damage the actuating arm of the Sensitive Switches (1010901),

NOTE: The set screws must be removed sequentially due to limited accessibility. Figure 5A illustrates the sequence for removing set screws from all switch assemblies: Figure 5B illustrates the sequence for removing set screws from an individual switch assembly.

NOTE: Check to insure that the hex socket of each set screw is free of foreign matter prior to inserting wrench into socket.

2.9.1 Insert an .050-inch allen hex wrench (the style used will depend on the location of the set screw) into the hex socket of the set screw. Keep the wrench fully bottomed in the socket and carefully apply a counter-clockwise torque to remove the set screw.

TO REMOVE STBY USE THE SAME STEPS USED IN REMOVING NO.8

FIGURE 5B

CAUTION
Do not force the set screw.

2.9.2 Remove the second set screw in the same manner as step 2.9.1.

2.9.3 Discard all removed set screws per paragraph IX of this RIB.

2.9.4 Remove the cap housing assembly, shaft assembly, shaft assembly, "O" ring and compression spring by lifting gently upward while holding the cap housing assembly. Retain the shaft assembly (dispose of "O" Ring) and compression spring for reassembly. Dispose of cap housing assembly per paragraph IX of this RIB.

2.9.5 Visually inspect the shaft assembly and its component parts for wear or damage. Any parts found to be unsatisfactory shall be replaced with Class A parts obtained through the appropriate Field Site Supply area.

2.10 Reassemble each Pushbutton Switch Assembly as follows:

2.10.1 Remove from retrofit kit 8104241, new set screws (AN565DC4H3), for installation into the Mounting Housing Assembly (2003933).

2.10.2 Install all set screws three to five full turns and then back them out again to be sure that any residue "Locktite" has been removed and will not interfere with the proper seating of the shaft assembly.

2.10.3 Clean the thread of the set screws and the mounting housing with Freon TF and a cotton swab to insure that threads are free of any foreign matter.

2.10.4 Reinstall the two set screws into mounting housing of one key position approximately one or two turns.

2.10.5 Apply "Locktite" staking compound (MIL-S-22473, Type HV) to the threads of each of the two set screws using an artists brush or toothpick.

NOTE: Do not allow any staking compound to enter the hex socket portion.

2.10.6 Remove from retrofit kit new Cap Housing Assembly, part no. 2004738-01 and install to it the Shaft

Assembly (2003975). Repeat this procedure for the nineteen assemblies.

2.10.7 Install the Compression Spring, (2004941) (retained from step 2.9.4 as was the Shaft Assembly) and install it and "O" Ring (1006369) (provided in kit) to shaft.

2.10.8 Insert the entire assembly (Cap Housing, Shaft, and Spring) into the Mounting Housing Assembly (2003933)

NOTE: Ensure that the Shaft Assembly is fully bottomed in the Mounting Housing. Apply the necessary force by using the index finger with a finger cot on the face of the Shaft Assembly. More force may be necessary to fully seat the Shaft Assembly between the contact wires since this is an interference fit.

2.10.9 Using plastic shims and 093-inch plastic spacers as shown in Figure 6, align the Shaft Assembly and Cap Housing sub-assemblies.

2.10.10 Torque the two set screws of each mounting housing 2.5 to 2.8 inch-pounds after alignment requirements have been accomplished in step 2.10.9.

2.10.11 Repeat steps 2.10.7 through 2.10.10 until all 19 mounting housings have the shaft assembly, cap housing assembly and compression spring installed

2.11 Install the 19 Engraved Caps,(1005028.),provided in kit, to the cap housing assemblies as follows:

2.11.1 Insure that each Cap Retaining Spring, part no. 2004944, is in place in the slots at the top and bottom of each engraved cap.

2.11.2 Select the cap of the proper nomenclature for a given key position and insert the bottom cap retaining spring (bottom of engraved cap) into the matching slot of the cap housing. See Figure 6.

2.11.3 Depress the upper cap retaining spring with a toothpick while lowering the engraved cap to the housing assembly and release the cap retaining spring (see Figure 4).

2.11.4 Check the engraved cap to be sure that it is properly held in position and in the correct

FIGURE 6

position with the proper nomenclature right side up.

2.12 Actuate the pushbutton switch assemblies several times to insure that the travel characteristics are proper and smooth throughout the travel distance.

2.13 Clean the area of the pushbutton switches and indicators free of dust, etc., with Freon TF and cotton swabs.

NOTE: Do not clean face surfaces of indicators.

2.14 Remove the Indicator Alarm (1006387) from the AGC DSKY as follows: (see Figure 7)

2.14.1 Remove the four socket head screws (MS16995-20) and four flat washers (MA8620C8) mounting the Alarm Indicator to the Front Housing Assembly. Dispose of screws per Paragraph IX.

2.14.2 Jack the Alarm Indicator from the Front Housing Assembly by turning the two jacking screws counter-clockwise a quarter-turn at a time. Alternate between the two screws so as to lift the indicator in parallel to its mounting surface while supporting the top portion of the indicator by hand maintaining the parallelism. Dispose of removed indicator per paragraph IX of this RIB.

2.15 Remove from retrofit kit IL/Cover Assembly, part no. 2003899-011. Avoid handling face of panel.

2.16 Clean the mating surfaces and inserts of the Front Housing Assembly carefully with Freon TF and cotton swabs (sparingly). Inspect rubber gasket for cleanliness.

2.17 Apply a thin coating of Silicone Compound (1006879) to the mating surfaces of the Front Housing Assembly (do not get any on the gasket or in the tapped holes)

2.17.1 Fill Female Connectors on the Front Housing Assy. which mate with the I/L Assy. with Silicone Compound, MIL-S-8660.

2.18 Gently lower the Alarm Indicator into position on the dowel pins of the Front Housing Assembly with the Indicator placed approximately parallel to its mating surfaces. See Figure 7.

2.19 Turn the six jacking screws (do not force) a quarter-turn at a time, alternating between each screw (criss-cross method) until the Indicator and Cover has been jacked down to the height of the bonded rubber gasket. See Figure 8.

NOTE: If any noticeable resistance is offered by the Indicator in the step above, stop immediately and remove the Indicator and inspect the screws, inserts, and contact pins prior to reinstalling.

2.20 Continue tightening the jacking screws a quarter-turn at a time (still alternating in a criss-cross manner) until a mounting torque of 8.5 to 9.5 inch-pounds has been achieved. See Figure 8 for sequencing.

CAUTION:

Torque down carefully to avoid putting any undue strain on any portion of the IL/Cover Assembly. and carefully avoid contact with face plate.

2.21 Clean the area of the pushbutton switches and indicators to insure that they are free of dust, silicone compound, etc., using Freon TF and cotton swabs.

NOTE: Do not clean face surface of indicators unless absolutely necessary (then use spray "Bon-Ami").

2.22 Assemble the Front Cover (2004739) provided in retrofit kit, to the Front Housing Assembly with eight socket head screws and flat washers (retained from step 2.4) by first lowering the Front Cover carefully into place on the Front Housing and then installing the screws and washers (reference Figure 9).

FIGURE 8

NOTE: Ensure that dowel pins
are properly aligned.

2.23 Torque the eight socket head screws 8 to 9 inch-pounds starting with the center screw and working outward around the perimeter of the cover.

2.24 Turn the AGC DSKY over carefully so that it is in a face down position on the pad. PAD MUST BE CLEAN.

2.25 Remove the four pan head cross recessed screws (MS35216-1) which mount the nameplate (1004260-20) to the rear cover of the DSKY and remove the nameplate. Dispose of nameplate and screws in accordance with Paragraph IX of this RIB.

2.26 Remove from retrofit kit, the new nameplate and its corresponding new screws (4) (MS35216-1) and proceed as follows:

2.26.1 Using stamping set stamp the [illegible] the applicable serial number and Part Nos. as follows:
if reworking 2003994-011 DSKY Part Nos will be 2003994-021,
if reworking 2003950-011 DSKY Part Nos will be 2003950-031
and if reworking 2003985-051 Part Nos will be 2003985-061.
Characters to be .08/.10 inches high per ND 1002019 and ND 1002023.

2.26.2 Clean the area of the rear cover where the nameplate is to be mounted. Use Freon TF and cotton swabs.

2.26.3 Place the nameplate in its proper location and install the four screws one to two turns only.

2.26.4 Apply Sealing Compound (MIL-S-22473, Grade HV) to the threads of the four screws.

2.26.5 Resume tightening the screws down until they are flush with the nameplate and then torque them 2.0 to 2.5 inch-pounds. Clean away any excess sealing compound that might have been squeezed out.

2.27 Reassemble the DSKY to its Handling Fixture as follows:

2.27.1 Assemble the two DSKY Mounting Brackets (2014009) to the DSKY. Make sure they are right side up and secure with eight pan head screws (MS51958-61, eight flat washers (MS15795-808) hardware retained from step 2.1.3. Torque the screws 25 ± 2 inch-pounds.

2.27.2 Assemble the DSKY Cage (2014008) to the DSKY Mounting Brackets using eight pan head screws, flat washers, and lock washers retained from step 2.1.2.

2.27.3 Assemble the Handling Fixture Panel (2014012) to the DSKY Mounting Brackets using eight flat head screws, flat washers, lock washers, and hex nuts retained from step 2.1.1.

3. Retest procedures:

3.1 Remove the Protective Cap (1006425) from the J9 connector of the DSKY.

3.2 Connect a variable 115 VAC 400 cps power supply to pins number 38 and 40 of the J9 DSKY connector (only) using an Adapter Cable (AC-EX-A-22379 or equivalent - female Deustch Connector or female connector pins) and a power source.

NOTE: The power supply used for testing may be one of the following: (a) a DSKY Test Station(Ray./Wal); (b) an AGC Computer/CTS combination, or (c) a black box suitable for the purpose intended having obtained prior approval for its use from applicable inspection agency.

3.3 Energise the power source increasing voltage to 75 VAC maximum at the DSKY.

3.4 Verify that the nineteen Shaft Assemblies of the Pushbutton Switch Assemblies are illuminated.

3.5 For IL retest in the sub-system configuration, retest per JDC 05783 using mylar tape per 05784.

NOTE: Set-up porcedures are listed in ND 1021042, Figure 7-8, page 7-31/7-32.
Also: Program ALLEREST is acceptable for testing of Indicator Lights.

VIII. MODIFICATION DESIGNATION:

Not Applicable. Re-identification was performed in step 2.26 of this RIB.

IX. DISPOSITION OF REMOVED PARTS:

All removed parts (IL Panel) (etc.), excluding miscellaneous screws and washers, are to be returned to Raytheon, Waltham, for disposition. Proper packing methods will be followed for all shipments, per ND 1002214.

X. REPORT OF ACCOMPLISHMENT:

For the purposes of records and logistics, it is requested that [illegible] forms, AC Form 1 and Raytheon Form 53-9208, be completed and returned to applicable addressees.

1. One retrofit kit, part number 8104241, containg the following:

Item	Qty	Nomenclature	Part No.
a.	1	Retrofit Instruction Bulletin	0104126
b.	19	Cap, Nomenclature	1005022
—c.	1	IL/Cover Assembly	2003899-011

Item	Qty	Nomenclature	Part No.
d.	1	Nameplate	1004260-20
e.	19	"O" Ring	1006369
f.	38	Set Screw	AN565DC4H3
—g.	1	Front Cover	2004739-[illegible]
h.	19	Cap Housing Assembly	2004738-011
i.	4	Screw, pan head, cross recessed	MS35216-1
j.	38	Spring, Cap Retaining	2004944
—k.	4 oz	Silicone Compound	MIL-S-8660

2. Material required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	A/R	Sealing Compound	MIL-S-22473, Grade HV
b.	A/R	Freon TF	N/A
c.	A/R	Silicone Compound	1006879
d.	1	Foam rubber pad (approx. 1" thick)	N/A
e.	A/R	Toothpicks	N/A
f.	A/R	Cotton Swabs	N/A

3. Tools required but not supplied in kit:

NOTE: The tools required as specified herein are necessary for the retrofit, i.e., "or equivalent" does not apply to this listing.

Item	Qty	Nomenclature	Part No.
a.	1	Assembly Tool	AT-EX-A-222378
b.	1	Torque Tool Adapter	AT-EX-A22419
c.	1	Torque Adapter	AT-EX-A-22174
d.	1	"Jomite 5A" Torque Wrench	AT-EX-A21560
e.	2	Left Hand Twist Drill	Size #49
f.	2	Left Hand Twist Drill	Size #50
g.	2	Left Hand Twist Drill	Size #51
h.	6	.050-inch Hex Broaches	N/A
i.	1	Starrett Pin Vise (to .080-inch)	#162-B
j.	3	Plastic Shim Stock (.005-inch thick by 2-inch long)	"Artus"
k.	1 box	.050-inch Hex Keys (Short Arm) SPS "Unbrako"	33-2
l.	1	0-100 inch-ounce Torque Wrench	N/A
m.	1	0-25 (or) 0-50 inch-ounce Torque Wrench	N/A
n.	1	Marking Press	"NBR-ALL"

4. Documents required but not supplied in kit:

Item	Nomenclature	Document No.
a.	Workmanship Standard	AC-STD-1(3Mar64)
b.	AGC DSKY Assembly Drawing	2003994
c.	Front Housing Assembly Drawing	2003949
d.	Pushbutton Switch Assembly Drawing	2003896
e.	Interconnection Diagram	2005954
f.	Procurement Specification	PS 2003994

Item	Nomenclature	Document No.
g.	Alarm Indicator Drawing	2003899
h.	Nomenclature Cap Assembly Drawing	1005022
i.	General Specifications, Marking	ND 1002019
j.	Serialization	ND 1002023
k.	Packing and Shipping	ND 1002214

VII. PROCEDURE:

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 Mar. 1964.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

1.5 Serial numbers of equipment affected by this retrofit are not changed by this retrofit.

2. Retrofit the Universal DSKY using retrofit kit 8104241 as follows:

NOTE: The following DSKY part Numbers are applicable:

2003994-011
2003950-011
2003985-051

2.1 Remove the Universal DSKY from the Handling Fixture, part no. 2001413, referencing Figure 1, according to the following procedure:

NOTE: White gloves or finger cots should be worn during retrofit for protection of equipment.

2.1.1 Remove the eight flat head screws (MS511960-66), eight flat washers (MS15795-808), eight lock washers (MS35650-104) which mount the Handling Fixture Panel (2014009) and remove the panel. Retain panel and hardware for reassembly.

2.1.2 Remove the eight pan head screws (MS351958-62), eight lock washers (MS35337-81), and eight flat washers (MS15795-808) located on the sides of the DSKY Cage (2014008) and remove the cage. Retain cage and hardware for reassembly.

2.1.3 Remove the eight pan head screws (MS51958-61) and eight flat washers (MS15795-808) that mount the DSKY Mounting Brackets (2014009) to the DSKY and remove the mounting brackets. Retain brackets and hardware for reassembly.

2.2 Insure that the Protective Cap (1006425-14) is in place on the J9 connector of the DSKY.

2.3 Place the DSKY face up (indicator lights side) on a foam rubber pad.

2.4 Reference Figure 2 and remove the eight socket head screws (1001489-59) and the eight flat washers (NAS-620C6), that mount the Front Cover (2004929-021) to the DSKY. Retain hardware for reassembly.

2.5 Remove the Front Cover from the DSKY by lifting up (slowly) while keeping the cover parallel to the front housing surfaces. Dispose of cover per paragraph IX of this RIB.

2.6 Clean the area of the pushbutton switch assemblies and the indicator assemblies to insure that the surfaces are free of dust and foreign matter. Use Freon TF and cotton swabs for cleaning. Do not touch IL/EL faces.

2.7 Study Figure 3 to familiarize yourself with the general construction and assembly of the pushbutton switch assemblies before proceeding.

2.8 Remove the Engraved Cap (1006353) from the pushbutton switch assembly by depressing the Cap Retaining Spring (2004944) with a toothpick inserted through the slot in the Housing Assembly (2003926) as illustrated in Figure 4. Repeat this procedure for each of the nineteen assemblies. Dispose of caps and springs per paragraph IX of this RIB.

2.9 Remove the two set screws (AN565DC4113), one Cap Housing Assembly (2003926-011), one Shaft Assembly, (2003975-011), and one Compression Spring (2004941) from each of the 19 pushbutton switch assemblies as follows:

CAUTION

Do not disturb or damage the actuating arm of the Sensitive Switches (1010901),

NOTE: The set screws must be removed sequentially due to limited accessibility. Figure 5A illustrates the sequence for removing set screws from all switch assemblies: Figure 5B illustrates the sequence for removing set screws from an individual switch assembly.

NOTE: Check to insure that the hex socket of each set screw is free of foreign matter prior to inserting wrench into socket.

2.9.1 Insert an .050-inch allen hex wrench (the style used will depend on the location of the set screw) into the hex socket of the set screw. Keep the wrench fully bottomed in the socket and carefully apply a counter-clockwise torque to remove the set screw.

TO REMOVE STBY USE THE SAME STEPS USED IN REMOVING NO.8

FIGURE 5B

CAUTION
Do not force the set screw.

2.9.2 Remove the second set screw in the same manner as step 2.9.1.

2.9.3 Discard all removed set screws per paragraph IX of this RIB.

2.9.4 Remove the cap housing assembly, shaft assembly, shaft assembly, "O" ring and compression spring by lifting gently upward while holding the cap housing assembly. Retain the shaft assembly (dispose of "O" Ring) and compression spring for reassembly. Dispose of cap housing assembly per paragraph IX of this RIB.

2.9.5 Visually inspect the shaft assembly and its component parts for wear or damage. Any parts found to be unsatisfactory shall be replaced with Class A parts obtained through the appropriate Field Site Supply area.

2.10 Reassemble each Pushbutton Switch Assembly as follows:

2.10.1 Remove from retrofit kit 8104041, new set screws (AN565DC4H3), for installation into the Mounting Housing Assembly (2003933).

2.10.2 Install all set screws three to five full turns and then back them out again to be sure that any residue "Locktite" has been removed and will not interfere with the proper seating of the shaft assembly.

2.10.3 Clean the thread of the set screws and the mounting housing with Freon TF and a cotton swab to insure that threads are free of any foreign matter.

2.10.4 Reinstall the two set screws into mounting housing of one key position approximately one or two turns.

2.10.5 Apply "Locktite" staking compound (MIL-S-22473, Type HV) to the threads of each of the two set screws using an artists brush or toothpick.

NOTE: Do not allow any staking compound to enter the hex socket portion.

2.10.6 Remove from retrofit kit new Cap Housing Assembly, part no. 2004738-011 and install to it the Shaft

Assembly (2003975). Repeat this procedure for the nineteen assemblies.

2.10.7 Install the Compression Spring, (2004941) (retained from step 2.9.4 as was the Shaft Assembly) and install it and "O" Ring (1006369) (provided in kit) to shaft.

2.10.8 Insert the entire assembly (Cap Housing, Shaft, and Spring) into the Mounting Housing Assembly (2003933)

NOTE: Ensure that the Shaft Assembly is fully bottomed in the Mounting Housing. Apply the necessary force by using the index finger with a finger cot on the face of the Shaft Assembly. More force may be necessary to fully seat the Shaft Assembly between the contact wires since this is an interference fit.

2.10.9 Using plastic shims and 093-inch plastic spacers as shown in Figure 6, align the Shaft Assembly and Cap Housing sub-assemblies.

2.10.10 Torque the two set screws of each mounting housing 2.5 to 2.8 inch-pounds after alignment requirements have been accomplished in step 2.10.9.

2.10.11 Repeat steps 2.10.7 through 2.10.10 until all 19 mounting housings have the shaft assembly, cap housing assembly and compression spring installed

2.11 Install the 19 Engraved Caps, (1005022,), provided in kit, to the cap housing assemblies as follows:

2.11.1 Insure that each Cap Retaining Spring, part no. 2004944, is in place in the slots at the top and bottom of each engraved cap.

2.11.2 Select the cap of the proper nomenclature for a given key position and insert the bottom cap retaining spring (bottom of engraved cap) into the matching slot of the cap housing. See Figure 6.

2.11.3 Depress the upper cap retaining spring with a toothpick while lowering the engraved cap to the housing assembly and release the cap retaining spring (see Figure 4).

2.11.4 Check the engraved cap to be sure that it is properly held in position and in the correct

FIGURE 6

position with the proper nomenclature right side up.

2.12 Actuate the pushbutton switch assemblies several times to insure that the travel characteristics are proper and smooth throughout the travel distance.

2.13 Clean the area of the pushbutton switches and indicators free of dust, etc., with Freon TF and cotton swabs.

NOTE: Do not clean face surfaces of indicators.

2.14 Remove the Indicator Alarm (1006387) from the Universal DSKY as follows: (see Figure 7)

2.14.1 Remove the four socket head screws (MS16995-20) and four flat washers (MAS620C8) mounting the Alarm Indicator to the Front Housing Assembly. Dispose of screws per Paragraph IX.

2.14.2 Jack the Alarm Indicator from the Front Housing Assembly by turning the two jacking screws counter-clockwise a quarter-turn at a time. Alternate between the two screws so as to lift the indicator in parallel to its mounting surface while supporting the top portion of the indicator by hand maintaining the parallelism. Dispose of removed indicator per paragraph IX of this RIB.

2.15 Remove from retrofit kit IL/Cover Assembly, part no. 2003899-011. Avoid handling face of panel.

2.16 Clean the mating surfaces and inserts of the Front Housing Assembly carefully with Freon TF and cotton swabs (sparingly). Inspect rubber gasket for cleanliness.

2.17 Apply a thin coating of Silicone Compound (1006879) to the mating surfaces of the Front Housing Assembly (do not get any on the gasket or in the tapped holes)

2.17.1 Fill Female Connectors on the Front Housing Assy. which mate with the I/L Assy. with Silicone Compound, MIL-S-8660.

2.18 Gently lower the Alarm Indicator into position on the dowel pins of the Front Housing Assembly with the Indicator placed approximately parallel to its mating Surfaces. See Figure 7.

2.19 Turn the six jacking screws (do not force) a quarter-turn at a time, alternating between each screw (criss-cross method) until the Indicator and Cover has been jacked down to the height of the bonded rubber gasket. See Figure 8.

NOTE: If any noticeable resistance is offered by the Indicator in the step above, stop immediately and remove the Indicator and inspect the screws, inserts, and contact pins prior to reinstalling.

2.20 Continue tightening the jacking screws a quarter-turn at a time (still alternating in a criss-cross manner) until a mounting torque of 8.5 to 9.5 inch-pounds has been achieved. See Figure 8 for sequencing.

CAUTION:

Torque down carefully to avoid putting any undue strain on any portion of the IL/Cover Assembly. and carefully avoid contact with face plate.

2.21 Clean the area of the pushbutton switches and indicators to insure that they are free of dust, silicone compound, etc., using Freon TF and cotton swabs.

NOTE: Do not clean face surface of indicators unless absolutely necessary (then use spray "Bon-Ami").

2.22 Assemble the Front Cover (2004739) provided in retrofit kit, to the Front Housing Assembly with eight socket head screws and flat washers (retained from step 2.4) by first lowering the Front Cover carefully into place on the Front Housing and then installing the screws and washers (reference Figure 2).

FIGURE 8

NOTE: Ensure that dowel pins are properly aligned.

2.23 Torque the eight socket head screws 8 to 9 inch-pounds starting with the center screw and working outward around the perimeter of the cover.

2.24 Turn the Universal DSKY over carefully so that it is in a face down position on the pad. PAD MUST BE CLEAN.

2.25 Remove the four pan head cross recessed screws (MS35216-1) which mount the nameplate (1004260-20) to the rear cover of the DSKY and remove the nameplate. Dispose of nameplate and screws in accordance with Paragraph IX of this RIB.

2.26 Remove from retrofit kit, the new nameplate and its corresponding new screws (4) (MS35216-1) and proceed as follows:

2.26.1 Using stamping set stamp "Universal DSKY", the applicable serial number and Part Nos. as follows:
if reworking 2003994-011 DSKY Part Nos will be 2003994-021,
if reworking 2003950-011 DSKY Part Nos will be 2003950-031
and if reworking 2003985-051 Part Nos will be 2003985-061.
Characters to be .08/.10 inches high per ND 1002019 and ND 1002023.

2.26.2 Clean the area of the rear cover where the nameplate is to be mounted. Use Freon TF and cotton swabs.

2.26.3 Place the nameplate in its proper location and install the four screws one to two turns only.

2.26.4 Apply Sealing Compound (MIL-S-22473, Grade HV) to the threads of the four screws.

2.26.5 Resume tightening the screws down until they are flush with the nameplate and then torque them 2.0 to 2.5 inch-pounds. Clean away any excess sealing compound that might have been squeezed out.

2.27 Reassemble the DSKY to its Handling Fixture as follows:

2.27.1 Assemble the two DSKY Mounting Brackets (2014009) to the DSKY. Make sure they are right side up and secure with eight pan head screws (MS51958-61, eight flat washers (MS15795-808) hardware retained from step 2.1.3. Torque the screws 25 ± 2 inch-pounds.

2.27.2 Assemble the DSKY Cage (2014008) to the DSKY Mounting Brackets using eight pan head screws, flat washers, and lock washers retained from step 2.1.2.

2.27.3 Assemble the Handling Fixture Panel (2014012) to the DSKY Mounting Brackets using eight flat head screws, flat washers, lock washers, and hex nuts retained from step 2.1.1.

3. Retest procedures:

3.1 Remove the Protective Cap (1006425) from the J9 connector of the DSKY.

3.2 Connect a variable 115 VAC 400 cps power supply to pins number 38 and 40 of the J9 DSKY connector (only) using an Adapter Cable (AC-EX-A-22379 or equivalent - female Deustch Connector or female connector pins) and a power source.

NOTE: The power supply used for testing may be one of the following: (a) a DSKY Test Station (Ray./Wal); (b) an AGC Computer/CTS combination, or (c) a black box suitable for the purpose intended having obtained prior approval for its use from applicable inspection agency.

3.3 Energize the power source increasing voltage to 75 VAC maximum at the DSKY.

3.4 Verify that the nineteen Shaft Assemblies of the Pushbutton Switch Assemblies are illuminated.

3.5 For IL retest in the sub-system configuration, retest per JDC 05783 using mylar tape per 05784.

NOTE: Set-up porcedures are listed in ND 1021042, Figure 7-8, page 7-31/7-32. Also: Program ALLEREST is acceptable for testing of Indicator Lights.

VIII. MODIFICATION DESIGNATION:

Not Applicable. Re-identification was performed in step 2.26 of this RIB.

IX. DISPOSITION OF REMOVED PARTS:

All removed parts (IL Panel) (etc.), excluding miscellaneous screws and washers, are to be returned to Raytheon, Waltham, for disposition. Proper packing methods will be followed for all shipments, per ND 1002214.

X. REPORT OF ACCOMPLISHMENT:

For the purposes of records and logistics, it is requested that [illegible] forms, AC Form 1 and Raytheon Form 53-9208, be completed and returned to applicable addressees.

I. **PURPOSE:**

Retrofit of the G&N Failure Detect Module, part no. 1003220-011, located in the Main DSKY, to reduce excessive noise on the input circuit. thereby eliminating erroneous alarm signals.

II. **AUTHORITY:**

This retrofit is authorized by ECP-ACSK-642
CCA-497-0482

III. **UNITS AFFECTED:**

Name	Part No.	Retrofit S/N	New Part No.
AGC Main DSKY (100 Series)	1003563-081	G&N 122 & 123	1003563-071
G&N Failure Detect Module	1003220-011	RAY 15-18	1003220-021

IV. **PRIORITY CHANGES:**

None.

V. **RELATED CHANGES:**

None.

VI. **MATERIAL REQUIRED:**

1. One retrofit kit, part number 8104243, containing the following:

Item	Qty	Nomenclature	Part No.
a.	1	Retrofit Instruction Bulletin	0104127
b.	1	Capacitor, .01 mf	1006777-31

VII. **PROCEDURE:**

NOTE: This Retrofit Instruction Bulletin is presented in four parts, viz:

1. General Instructions - applicable to all retrofit personnel.
2. Removal and Replacement of Failure Detect Module in DSKY - applicable to Field Site personnel.
3. Retrofit of Failure Detect Module - applicable to personnel at Raytheon, Waltham.
4. Retest Procedures - applicable to all retrofit personnel.

1. General Instructions·

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any parts unless so directed. No deviation should be made from any procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) (Field only) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 March 19 4.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

1.5 Serial numbers of equipment affected by this retrofit are not changed by this retrofit.

2. Removal and Replacement of G&N Failure Detect Module, part no. 1003220-011, in Block I, 100 Series AGC Main DSKY, part no. 10035 3-051, using retrofit kit 8104240:

2.1 Remove the hardware securing the DSKY to the handling fixture, or spacecraft, whichever is applicable and remove the DSKY. Retain hardware for reassembly.

2.2 Loosen the four screws marked "A" on the side of the relay tray housing.

2.3 Jack out the four relay modules by means of the four jacking screws on the relay module wirewrap plate.

2.4 Remove the four relay modules and record the thickness and location of shims (if any) on each of the modules stop pins. Retain for reassembly.

2.5 Remove the eight pan head screws securing the two stiffeners to the relay tray housing. Retain for reassembly.

2.6 Remove the two button head screws, two socket head screws and four flat washers securing the failure detect assembly to the relay tray housing. Back off the assembly from the connector by means of the assembly jacking screw. Retain hardware for reassembly.

2.7 Dispose of removed G&N Failure Detect Module part no. 1003220-011, by returning to stores for disposition as required in paragraph IX of this RIB.

2.8 Remove from retrofit kit 8104240 retrofitted G&N Failure Detect Module, part no. 1003220-021.

2.9 Assemble module to DSKY and reassemble DSKY by reversing the procedures in steps 2.1 through 2.6. Torque hardware per notes in drawing 1003563.

2.10 Locate "-051" stenciled on DSKY and remove with Chem-Stripper and cotton swabs.

2.11 Using white ink and stencil provided in kit, stencil "-071" in the same location per ND 1002019.

2.12 Reassemble DSKY to handling fixture or spacecraft, whichever is applicable.

2.13 Retest DSKY per step 4.1 of this RIB.

3. Retrofit of G&N Failure Detect Module, part no. 1003220-011, using retrofit kit 8104243:

3.1 Reference Figure 1 of this RIB and locate and drill .117/.123-inch diameter hole and countersink 82 degrees to .23/.24 diameter in the housing as shown in Figure 1.

3.2 Apply chromate to all raw metal surfaces per ND 1002040 except do not epoxy coat.

3.3 Remove cover, part no. 1004316 by removing phillips head screws five places. Retain for reassembly.

NOTE: Inspect interior of module and clean out any metal particles that may have resulted from drilling/countersinking.

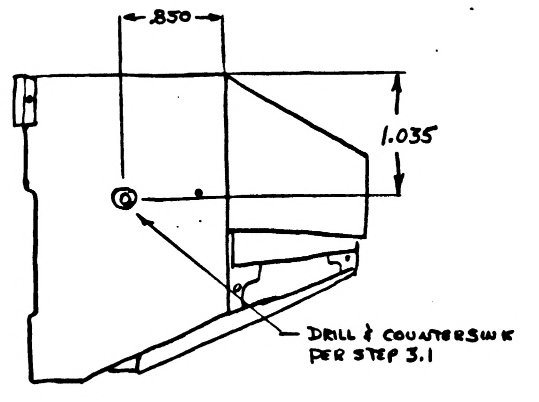

Figure 1. Dimensions for drilling housing.

3.4 Install capacitor (1006777-31), supplied in kit, into component block by inserting midway into block with leads extending both sides.

3.5 Solder leads of capacitor and two wires (1010789 yellow) to terminals of component block per ND 1002071.

NOTE: If component block is not supplied with terminals (1006708) already installed, install them by hand gently but firmly since their installation is a semi-interference fit.

3.6 Encapsulate component block/capacitor as shown in Figure 2 of this RIB using resin, curing agent, and thinner, supplied in kit, per Method F of ND 1002009.

3.7 Depot and remove pins 182 and 209 from Connector (05A9J1) as shown in Figure 3 of this RIB.

NOTE: Pin locations may be conclusively ascertained by removing connector gasket which will reveal pin numbers embossed on connector. A magnifying glass would assist in accurate reading.

3.8 Strip and install leads from component block into new pins (1010738-9), supplied in kit, per detail A and notes 4 and 5 of G&N Failure Detect Cable Assembly Drawing 1005731.

3.9 Install component block into G&N Failure Detect Assembly using screw (MS 51959-13), supplied in kit, and bond per ND 1002004, Type V. Torque screw 5-7 inch-pounds.

3.10 Install pins 182 and 209 back into connector and encapsulate depotted area per ND 1002009, Method E.

NOTE: Before proceeding to step 3.11, retest per step 4.2.

3.11 Locate "-011" stenciled on side of G&N Failure Detect Module and remove with Chem-Stripper and cotton swabs.

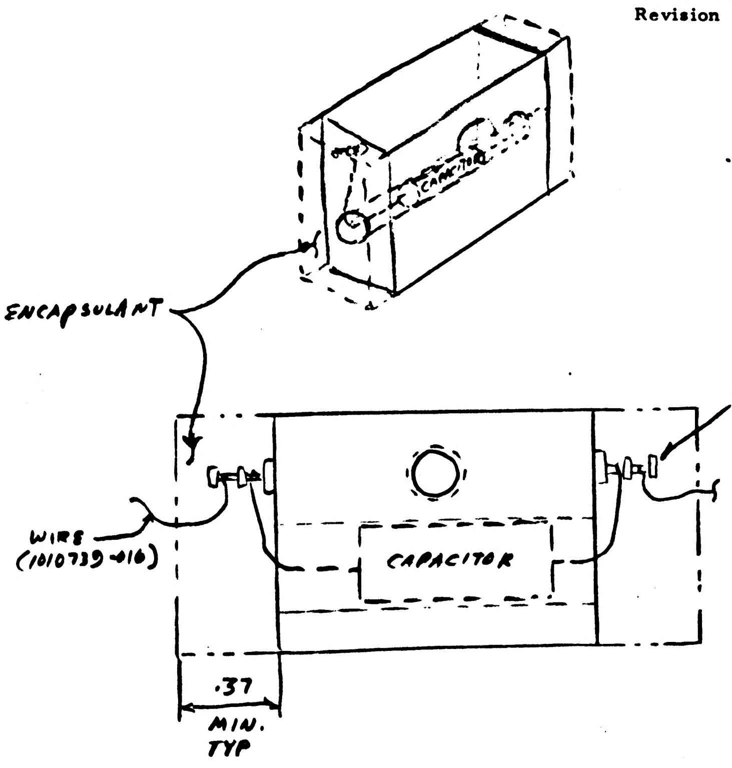

Figure 2. Encapsulation of Component Block and Capacitor.

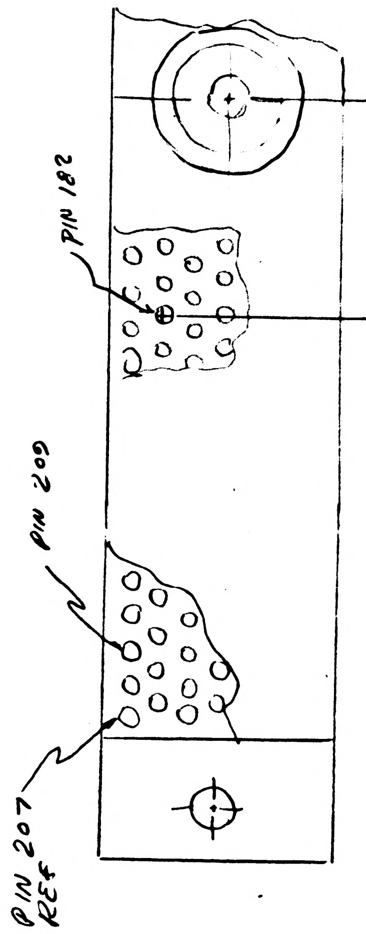

Figure 3. Location of Connector Pins 182 and 209.

3.12 Using black ink, brush or air-operated equipment, stencil "-021" per ND 1002019 using stencil provided in kit.

4. Retest procedures. Step 4.1 applies to field retrofit, step 4.2 applies to retrofit at Raytheon, Waltham.

4.1 Retest Block I, 100 Series Main DSKY in accordance with applicable JDC's in CSS Checkout Flowgrams of ND 1021041, Volume II.

4.2 Retest module as follows:

4.2.1 Retest to FTM 1003220 and the following JDC's: 05090, 05091, 05092, 05093 (see step 4.2.2) and 04310 (test for Night Watchman only).

4.2.2 Step 30 of "B. Procedure," of JDC 05093 is to be performed as shown in Figure 4 of this RIB for the purposes of this retrofit only.

VIII. MODIFICATION DESIGNATION:

Not Applicable. The reidentification of the DSKY was accomplished in steps 2.10 and 2.11 of this RIB.

IX. DISPOSITION OF REMOVED PARTS:

If retrofit is performed in field and Failure Detect Module is replaced, return removed module to stores for disposition.

X. REPORT OF ACCOMPLISHMENT:

Complete Raytheon Form 53-9208 and return to addressee.

Complete AC Form 1 (Page 12A of this RIB) and return to addressee.

---

30. Monitor oscilloscope and measure the following pulse parameters as indicated in Figure 1A and Figure 1B.

NOTE: Use Internal Trigger of oscilloscope.

Figure 1A Requirements

A.	Level (Hi)	0.6 ± 0.1 VDC
B.	Level (Lo)	NMT 0.2 VDC
C.	Pulse Width	6.0 ±0.6 usec
D.	Period Time	2.0 ±0.2 sec
E.	Rise Time	NMT 300 nsec
F.	Fall Time	NMT 300 nsec

Figure 1B Requirements

A.	Level (Hi)	1.2 ± 0.4 VDC below B+
B.	Level (Lo)	NMT 0.1 VDC below B+
C.	T Rise	NLT 3.5 usec NMT 5.0 usec

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ____________ Date: ____________ G & N # ________

The following information must be submitted to Apollo Integrated Logistics Support, Dept. 38-05, AC Electronics, Milwaukee, upon the completion of any retrofit performed on Apollo GFP equipment or repair of Apollo Airborne GFP.

In Part I below, list all Apollo airborne GFP components that are repaired and all A/B and GSE MD symbols or P/N changes affecting subassembly and higher levels of equipment. List highest-to-lowest level of assembly order. All parts/assemblies added to or removed from airborne equipment shall be listed in Part II using the Part I Indent No. of the assembly affected as a cross reference.

PART I: A/B GSE BLACK BOXES/REPARABLE SUB-ASSEMBLIES AFFECTED

I. PURPOSE:

Retrofit instructions to install shatterproof glass covering the I/L and E/L lights of the AGC DSKY, part number 2003994-021, to afford fire proofing and avoid the possibility of broken glass within the spacecraft under the requirements of MSC-A66-3, Revision A.

II. AUTHORITY:

This retrofit is authorized by ECP 785 - CCA - 497 - 0588

III. UNITS AFFECTED:

Name	Part No.	Serial No.	New Part No.
AGC DSKY	2003994-021	RAY 50, RAY 64, 51, 48, 58	2003994-031

IV. PRIORITY CHANGES:

None.

V. RELATED CHANGES:

None

VI. MATERIAL REQUIRED:

1. One retrofit kit, part number 8104250, containing the following:

Item	Qty	Nomenclature	Part No.
a.	1	Retrofit Instruction Bulletin	0104134
b.	1	(I/L) Cover Assembly	2003897-021
c.	1	(E/L) Cover Assembly	2003897-031
d.	1	Front Cover	2004739-001
e.	1	Nameplate	1004260-20
f.	2 oz.	Silicone Compound	MIL-S-8660
g.	4	Screws	MS 35216-1
h.	48	Flat Washers	NAS620C6
i.	12	Socket Hd Cap Screws	1001489-26
~~j.~~		~~[illegible] (glass installed)~~	~~[illegible]~~
k.	12	"O" Rings	

2. Material required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	A/R	Sealing Compound	MIL-S-22473, Grade HV
b.	A/R	Freon TF	N/A
c.	A/R	Silicone Compound	1006879
d.	1	Foam rubber pad (approx. 1" thick)	N/A
e.	A/R	Cotton Swabs	N/A

3. Tools required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	1	0-30 or 0-50 inch-pound Torque Wrench	N/A
b.	1	Marking Press	"NBR-ALL"

---

4. Documents required but not supplied in kit:

Item	Document	Document No.
a.	Workmanship Standard	AC-STD-1 (3 Mar 64)
b.	AGC DSKY Assembly Drawing	2003994
c.	Front Housing Assembly Drawing	2003949
~~d.~~	~~Procurement Specification~~	~~2003994~~
e.	I/L and Cover Assembly	2003899
f.	General Specifications, Marking	ND 1002019
g.	Serialization	ND 1002023
h.	Packing and Shipping	ND 1002214

VII. PROCEDURE:

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any part unless so directed. No deviation should be made from any procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 March 1964.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

1.5 Serial numbers of equipment affected by this retrofit are not changed by this retrofit.

---

2. Retrofit the AGC DSKY using retrofit kit 8104250 as follows:

2.1 Remove the AGC DSKY from the Handling Fixture, part no. 2001413, according to the following procedure:

NOTE: Omit steps 2.1 through 2.3 if DSKY is already installed in the space craft.

2.1.1 Remove the eight flat head screws (MS51960-66), eight flat washers (MS15795-808), eight lock washers (MS35650-104) which mount the Handling Fixture Panel (2014009) and remove the panel. Retain panel and hardware for reassembly.

2.1.2 Remove the eight pan head screws (MS57968-62), eight lock washers (MS35337-81), and eight flat washers (MS15795-808) located on the sides of the DSKY Cage (2014008) and remove the cage. Retain cage and hardware for reassembly.

2.1.3 Remove the eight pan head screws (MS51958-61) and eight flat washers (MS15795-808) that mount the DSKY Mounting Brackets (2014009) to the DSKY and remove the brackets. Retain all items for reassembly.

2.2 Insure that the Protective Cap (1006425-14) is in place on the J9 connector of the DSKY.

2.3 Place the DSKY face up (indicator lights side) on a foam rubber pad.

2.4 Remove the eight socket head screws (1001489-59) and the eight flat washers (NAS-620C6) that mount the Front Cover (2004739-000) to the DSKY. Retain hardware for reassembly.

2.5 Remove the Front Cover from the DSKY by lifting it away slowly while keeping the cover parallel to the front housing surfaces. Dispose of Front Cover per paragraph IX of this RIB.

2.6 Remove the I/L and Cover Assembly (2003899-011) from the AGC DSKY as follows:

NOTE: The original I/L Cover was added to the I/L Assembly per RIB No. 0104126.

2.6.1 Jack the I/L and Cover Assembly from the Front Housing by turning the six jacking screws counterclockwise a quarter-turn at a time. Alternate between the six screws in a criss-cross manner so as to lift the assembly in parallel to its mounting surface.

2.7 Remove the I/L Cover from the I/L Assembly by removing the jacking screws from the cover by disengaging E Rings from the jacking screws and pulling the jacking screws free. Carefully separate the cover from the I/L. Dispose of the cover and hardware per paragraph IX of this RIB.

2.8 Clean the I/L Assembly with Freon and cotton swabs, using it sparingly, and insure that rubber gasket is clean.

CAUTION:

Do not clean acrylic face of I/L with Freon TF or allow any to come into contact with acrylic face.

2.9 Apply a thin coating of silicone compound (1006879) to the mating surfaces of the Front Housing Assembly. Be careful not to get any on the gasket or in the tapped holes.

2.10 Fill female connectors on the Front Housing Assembly which mate with the I/L Assembly with silicone compound (MIL-S-8660).

NOTE: Steps 2.9 and 2.10 utilize two different types of silicone compound.

2.11 Remove from retrofit kit new I/L Cover Assembly, part no. 2003897-021, and install it to the I/L Assembly as follows:

2.11.1 Remove from retrofit kit six flat washers (NAS620C6), and six socket head cap screws (1001489-26). Install a washer to each screw and insert the screws into the I/L Cover Assembly.

2.11.2 Remove from retrofit kit 18 flat washers (NAS620C6), divide them into groups of three, and place three washers over each screw thread where it protrudes through the I/L Cover Assembly.

2.11.3 Carefully lower the I/L Assembly over the cover so that the screws now protrude through the I/L Assembly as well as the cover, and the three washers on each screw act as shims providing a small gap between the I/L Cover and the I/L Assembly.

2.11.4 Remove from the retrofit kit six "O" Rings and slip a ring over each screw thread protruding through the I/L and Cover Assembly. The "O" Rings function to make the screws temporarily "captive" screws.

2.12 Return the I/L and Cover Assembly to the DSKY and alternately tighten down screws a quarter of a turn at a time until a mounting torque of 8.5 to 9.5 inch-pounds is achieved. The "O" Rings will "walk" up the screw threads to allow mating of surfaces.

CAUTION:

Insure that mating surfaces of DSKY and and I/L and Cover Assembly are correctly aligned and retrofit correctly performed before torquing down.

NOTE: THIS PAGE APPLIES IF E/L COVER ASSEMBLY - PART NO. 2003897-031 IS TO BE UTILIZED.

2.13 Remove from retrofit kit new E/L Cover Assembly, part no. 2003897-031, and install it to the E/L Assembly as follows:

2.13.1 Remove the E/L Assembly from the DSKY by removing four jacking screws (2004932-001), two socket head cap screws (MS16995), and their associated E rings and flat washers. Dispose of hardware per paragraph IX of this RIB.

2.13.2 Clean the E/L Assembly with Freon TF and cotton swabs (sparingly) and then apply a thin coating of silicone compound (1006879) to the mating surfaces.

CAUTION:

Do not clean acrylic face of E/L with Freon TF or allow any to come into contact with acrylic face.

2.13.3 Fill female connectors with silicone compound (MIL-S-8660).

NOTE: Steps 2.13.2 and 2.13.3 utilize two different types of silicone compound.

2.13.4 Reference steps 2.11 and 2.12 and perform the same procedure for the E/L Cover and Assembly, that is: installing socket head cap screws with washers, then inserting into cover, then adding three washers to each screw as shims, then placing cover onto E/L Assembly and adding "O" rings to make screws temporarily "captive."

CAUTION:

Insure that mating surfaces of DSKY and E/L and Cover Assembly are correctly aligned and retrofit correctly performed before torquing down.

2.14 Return the E/L and Cover Assembly to the DSKY and alternately tighten down screws a quarter turn at a time until a mounting torque of 8.5 to 9.5 inch-pounds is achieved.

2.15 Remove from retrofit kit new Front Cover, part no. 2004739-001, and carefully position it over the Front Housing Assembly to check clearances throughout.

2.16 Assemble the Front Cover to the DSKY using hardware retained from step 2.4. Tighten screws alternately.

2.17 Torque hardware to mounting torque of 8.5 to 9.5 inch-pounds.

3. Retest procedures:

Field site personnel will perform tests as necessary to assure that I/L and E/L lights correctly energize after completion of this retrofit.

VIII. **MODIFICATION DESIGNATION:**

1. Remove from retrofit kit the new nameplate and its corresponding new (4) screws (MS35216-1).
2. Using stamping set, stamp "AGC DSKY", the applicable S/N and the part numbers:

   2003994-031

3. Characters and digits are to be .08/.10 inches high per ND 1002019 and ND 1002023.
4. Remove existing nameplate and clean the area with Freon TF and cotton swabs. Dispose of removed nameplate per paragraph IX.
5. Place the new nameplate in the same location and install the four screws a few turns. Apply Sealing Compound (MIL-S-22473, Grade HV) to the threads and torque screws down 2.0 to 2.5 inch-pounds. Clean away any excess compound that might have been squeezed out.

IX. **DISPOSITION OF REMOVED PARTS:**

All removed parts, excluding miscellaneous screws and washers, are to be returned to Raytheon, Waltham. Pack for shipment per ND 1002214.

X. **REPORT OF ACCOMPLISHMENT:**

Complete forms (AC Form 1 and Raytheon Form 53-9208) and forward to addressees.

VII. **PROCEDURE:**

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any part unless so directed. No deviation should be made from any procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 March 1964.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

1.5 Serial numbers of equipment affected by this retrofit are not changed by this retrofit.

2. Retrofit the AGC DSKY using retrofit kit 8104252 as follows:

2.1 Remove the AGC DSKY from the Handling Fixture, part no. 2001413, according to the following procedure:

NOTE: Omit steps 2.1 through 2.3 if DSKY is already installed in the space craft or subsystem.

2.1.1 Remove the eight flat head screws (MS51960-66), eight flat washers (MS15795-808), eight lock washers (MS35650-104) which mount the Handling Fixture Panel (2014012) and remove the panel. Retain panel and hardware for reassembly.

2.1.2 Remove the eight pan head screws (MS57958-62) eight lock washers (MS35337-81), and eight flat washers (MS15795-808) located on the sides of the DSKY Cage (2014008) and remove the cage. Retain cage and hardware for reassembly.

2.1.3 Remove the eight pan head screws (MS51958-61) and eight flat washers (MS15795-808) that mount the DSKY Mounting Brackets (2014009) to the DSKY and remove the brackets. Retain all items for reassembly.

2.2 Insure that the Protective Cap (1006425-14) is in place on the J9 connector of the DSKY.

2.3 Place the DSKY face up (indicator light side) on a foam rubber pad.

NOTE: The instructions that follow are universal for all DSKYs which have been retrofitted per RIB No. 0104135, excluding DSKY part no. 2003985-041. Disregard references to the new I/L cover for this configuration.

2.4 Remove the eight socket head screws (1001489-59) and the eight flat washers (NAS-620C6) that mount the Front Cover to the DSKY. Retain hardware for reassembly.

2.5 Remove the Front Cover from the DSKY by lifting it away slowly while keeping the cover parallel to the front housing surfaces. Retain Front Cover for reassembly.

2.6 Remove the I/L Cover Assembly from the Front Housing Assembly by turning the six screws a quarter-turn at a time.

NOTE: Alternate between the screws so as to lift the indicator evenly, support the top portion by hand to insure even removal.

NOTE: Reference Figure 1 for steps 2.6 through 2.12.

2.7 Remove the I/L Cover from the I/L Assembly by disengaging the "E" Rings from the Jacking Screws and carefully separate the cover from the I/L and dispose of the I/L Assembly, jacking screws, and "E" Rings per paragraph IX of this RIB. Retain flat washers and Cover Assembly.

2.8 Remove from retrofit kit new I/L Assembly which is now identified as Indicator, Status/Caution, part no. 1005025, and clean this assembly with an optical cleaning kit. Insure that rubber gasket is clean.

CAUTION: Do not clean acrylic face of Status/Caution Indicator with Freon TF or allow any to come into contact with acrylic face.

2.9 Install the I/L Cover to the Status/Caution Indicator using retained flatwashers (1004546-4) and new hardware from retrofit kit as follows:

2.9.1 Install a flat washer (retained) to the head of each jacking screw (2004932-004) and insert the screws into the Status/Caution Indicator Cover.

2.9.2 Place two flat washers over each screw thread where it protrudes through the Status/Caution Indicator Cover (these washers act as shims between the cover and the indicator).

2.9.3 Carefully place the Cover over the Status/Caution Indicator so that the screws now protrude through both the cover and the indicator and the two washers on each screw act as shims.

2.9.4 Remove from retrofit kit six Retaining Rings ("E") (MS16633-4041) and place a flat washer over each screw protruding through the Status/Caution Indicator and Cover Assembly. Install a retaining ring to each screw over the flat washer thereby making the screws captive.

2.10 Apply a thin coating of silicone compound (1006879), supplied in kit, to the mating surfaces of the Status/Caution Indicator and the Front Housing Assembly of the DSKY. Do not get any on the gasket or in the tapped holes.

2.11 Fill female connectors on the Front Housing Assembly, which mate with the Status/Caution Indicator, with silicone compound (1008954), supplied in kit (note that this is a different compound than used in step 2.10).

2.12 Assemble the Status/Caution Indicator and Cover Assembly to the DSKY by positioning it in place and alternately tightening down the screws a quarter-of-a-turn at a time. Continue in this manner until a mounting torque of 8.5 to 9.5 inch-pounds is attained.

NOTE: Use criss-cross method.

2.13 Install the Front Cover Assembly "eggcrate" (retained with hardware from step 2.5) to the DSKY by placing it in position and alternately tightening down the screws a quarter-of-a-turn at a time until a mounting torque of 8.0 to 9.0 inch-pounds is achieved.

NOTE: Insure that clearances are correct throughout before torqueing down.

3. Install the DSKY to the Handling Fixture (if applicable) using hardware retained from step 2.1 as follows:

3.1 Assemble the two DSKY Mounting Brackets (2014009) to the DSKY. Insure that they are right side up and secure with eight pan head screws (MS51958-61), and eight flat washers (MS15795-808), and eight lock washers (MS35650-104), and then continue in reverse of steps 2.1.1, 2.1.2.

4. Retest Procedures:

Field site personnel will perform tests as necessary to insure that all legends on Status/Caution Indicator energize correctly after completion of this retrofit.

VIII. MODIFICATION DESIGNATION:

1. Remove from retrofit kit the new nameplate (1004260-20) and four screws (MS35216-1).

2. Using a stamping set, stamp "AGC DSKY", the applicable serial numbers, and the part numbers as follows:

2003994-041 and -051 become -061 and -071 respectively.
2003950-051 becomes -071
2003985-041 becomes -091

NOTE: Characters and digits are to be .08/.10 inches high per ND 1002019 and ND 1002023.

3. Remove existing nameplate and clean the area with Freon TF and cotton swabs. Dispose of removed nameplate per Paragraph IX of this RIB.

4. Install the new nameplate in the same location and insert the four screws with a few turns. Apply sealing compound (1008953-004) provided in kit, to the threads and torque screws down 2.0 to 2.5 inch-pounds. Clean away any excess compound that might have been squeezed out.

IX. DISPOSITION OF REMOVED PARTS:

All removed parts, excluding miscellaneous screws and washers, retaining rings, are to be returned to Raytheon, Waltham. Pack for shipment per ND 1002214.

X. REPORT OF ACCOMPLISHMENT:

Complete the following forms and forward to addressee:

1. AC Form 1 (page 10 of this RIB.)

2. Raytheon Form 53-9204.

Revision

I. PURPOSE:

To update the LEM Installation Kit, part no. 6004000-021, to the -051 configuration by removal of the brackets and their associated hardware.

II. AUTHORITY:

This RIB is authorized by ECP ACSK-0743, CCA 497-0590

III. UNITS AFFECTED:

Name	Part No.	Ray S/N	New Part No.
Installation Kit, Computer Group, LEM	6004000-021	—	6004000-051

IV. PRIORITY CHANGES:

None.

V. RELATED CHANGES:

None.

VI. MATERIAL REQUIRED:

1. One retrofit kit, part number 8104253, containing the following:

Item	Qty	Nomenclature	Part No.
a.	1	Retrofit Instruction Bulletin	0104137

2. Material required but not supplied in kit:

None.

3. Tools required but not supplied in kit:

None.

Sheet 3 of 5
RIB No. 0104137
Date
TDRR No.
Revision

4. Documents required but not supplied in kit:

Item	Document	Document No.
a.	General Specifications, Marking	ND 1002019
b.	Packing and Shipping	ND 1002214
c.	Workmanship Standard	AC-STD-1 (3 Mar 64)

VII. PROCEDURE:

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any part unless so directed. No deviation should be made from any procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 March 1964.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

1.5 Serial numbers of equipment affected by this retrofit are not changed by this retrofit.

2. Retrofit the LEM Installation Kit, part no. 6004000-021, using retrofit kit 8104253 as follows:

2.1 Remove from the LEM Installation Kit the following items:

2.1.1 Fourteen (14) Screw Retainer Brackets, part no. 2004149-004.

2.1.2 Twenty-eight (28) Mounting Screw Brackets, part no. 1001489-3.

Sheet 4 of 5
RIB No. 0104137
Date
TDRR No.
Revision

2.2 Dispose of items removed in step 2.1 per paragraph IX of this RIB.

3. Retest Procedures:

Not Applicable.

VIII. MODIFICATION DESIGNATION:

1. Reference ND 1002019 and reidentify tag (LEM Installation Kit is a "bag and tag" item) from 6004000-021 to 6004000-051.

XI. DISPOSITION OF REMOVED PARTS:

Removed items are to be returned to Raytheon, Waltham. Pack for shipment per ND 1002214.

X. REPORT OF ACCOMPLISHMENT:

1. Complete AC Form 1 (page 5 of this RIB) and return to addressee.

2. Complete Raytheon Form 53-9208 and return to addressee.

I. PURPOSE:

Retrofit instructions to replace the (LEM) AGC DSKY E/L Indicator and Cover Assembly with an E/L Indicator and Cover Assembly which has safety glass bonded over the entire surface of the Indicator glass. The additional bonded glass is provided to reduce the stress from thermal/vacuum environments.

II. AUTHORITY:

This retrofit is authorized by ECP 0768, CCA 497-0614

III. UNITS AFFECTED:

Name	Part No.	RAY S/N	New Part No.
AGC DSKY	2003994-061		2003994-081
AGC DSKY	2003994-071		2003994-091
AGC DSKY	2003994-041		2003994-111
AGC DSKY	2003994-051		2003994-121

IV. PRIORITY CHANGES:

1. RIB No. 0104135, RKA 8104251 ([illegible])
2. RIB No. 0104136 ,RKA 8104252

V. RELATED CHANGES:

None.

VI. MATERIAL REQUIRED:

1. One retrofit kit, part number 8104254, containing the following:

Item	Qty	Nomenclature	Part No.
a.	* 2 oz.	Sealing Compound (LOCKTITE)	1008953-003
b.	* 2 oz.	Silicone Compound (DC-4)	1008954
c.	* 5 oz.	Silicone Compound (DC-340)	1006879
d.	4	Screw, pan head, cross recessed	MS35216-1

* Denotes approx quantities.

Item	Qty	Nomenclature	Part No.
e.	1	Nameplate	1004260-20
f.	1	Retrofit Instruction Bulletin	0104138
g.	1	E/L and Cover Assembly	2003988-011, or 021

2. Material required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	A/R	Cotton Swabs	N/A
b.	A/R	Freon TF	N/A
c.	1	Foam rubber pad (approx. 1" thick and 12" x 12" approx.)	N/A

3. Tools required but not supplied in kit:

Item	Qty	Nomenclature	Part No.
a.	1	0-30 or 0-50 inch-pound torque Wrench	N/A
b.	1	Marking Press	"NBR-ALL"

4. Documents required but not supplied in kit:

Item	Document	Document No.
a.	Workmanship Standard	AC-STD-1 (3 March 64)
b.	AGC DSKY Assembly Drawing	2003994
c.	Front Housing Assembly Drawing	2003949
d.	General Specifications, Marking	ND 1002019

---

4. Documents required but not supplied in kit (cont):

Item	Document	Document No.
e.	Serialization	ND 1002023
f.	Packing and Shipping	ND 1002214
g.	E/L & Cover Assy Dwg	2003988

VII. PROCEDURE:

1. General Instructions:

1.1 Read and understand complete procedure prior to attempting retrofit. Do not discard any part unless so directed. No deviation should be made from any procedure outlined herein.

1.2 Update the Post Acceptance Data Package (PADP) as progress is made through the RIB.

1.3 All workmanship shall meet standards as defined in Workmanship Standard, AC-STD-1, dated 3 March 1964.

1.4 Refer to documents listed in paragraph VI, part 4, for applicable ND specifications.

1.5 Serial numbers of equipment affected by this retrofit are not changed by this retrofit.

2. Retrofit the AGC DSKY using retrofit kit 8104254 as follows:

2.1 Remove the AGC DSKY from the Handling Fixture, part no. 2014013 according to the following procedure:

NOTE: Omit steps 2.1 through 2.3 if DSKY is already installed in the space craft or subsystem.

2.1.1 Remove the eight flat head screws (MS51960-66), eight flat washers (MS15795-808), eight lock washers (MS 35650-104) which mount the Handling Fixture Panel (2014012) and remove the panel. Retain Panel and hardware for reassembly.

2.1.2 Remove the eight pan head screws (MS57958-62), eight lock washers (MS35337-81), and eight flat washers (MS157795-808) located on the sides of the DSKY Cage (2014008) and remove the cage. Retain cage and hardware for reassembly.

2.1.3 Remove the eight pan head screws (MS51958-61) and eight flat washers (MS15795-808) that mount the DSKY Mounting Brackets (2014009) to the DSKY and remove the brackets. Retain all items for reassembly.

2.2 Insure that the Protective Cap (1006425-14) is in place on the J9 connector of the DSKY.

2.3 Place the DSKY face up (indicator light side) on a foam rubber pad.

2.4 Remove the eight socket head screws (1001489-59) and the eight flat washers (NAS-620C6) that mount the Front Cover (2004739-001)to the DSKY. Retain hardware for reassembly.

2.5 Remove the Front Cover from the DSKY by lifting it away slowly insuring that it is lifted parallel to the front housing surfaces to avoid damage to the pushbuttons etc. Retain Cover for reassembly.

2.6 Jack the E/L and Cover Assembly from the Front Housing Assembly by turning the six jacking screws a quarter-turn at a time. Alternate between the screws (from side to side etc., criss-cross) so as to lift the indicator in parallel to its mounting surface.

NOTE: Support the top portion of the indicator by hand to maintain the parallelism.

2.7 Dispose of the removed E/L and Cover Assembly per paragraph IX of this RIB.

2.8 Clean the mating surfaces of the Front Housing Assembly with Freon TF and cotton swabs .

2.9 Remove from the retrofit kit, the new E/L and Cover Assembly, part no. 2003988-011,or 021 and clean it using Oprycal cleaning kit or equivalent.

CAUTION:

Do not clean glass face of E/L with Freon TF or allow any to come into contact with this surface.

2.10 Apply a thin coating of silicone compound (1006879), supplied in kit, to the mating surfaces of the Front Housing Assembly (Gasket Plate) being careful not to get any on the gasket or in the tapped holes.

2.11 Fill female connectors on the Front Housing Assembly, which mate with the E/L Assembly, with silicone compound (1008954), supplied in kit. Note that this is not the same silicone compound as used in step 2.10 (DC-4 used here, DC-340 used in step 2.10).

2.12 Carefully lower the new E/L and Cover Assembly into position on the dowel pins of the Front Housing Assembly approximately parallel to the mating surfaces.

2.13 Turn the six jacking screws (do not force) a quarter-turn at a time, alternating between each screw in a criss-cross manner.

CAUTION:

If any noticeable resistance is offered by the E/L and Cover Assembly during step 2.13, stop immediately and remove the Assembly. Inspect the screws, inserts, and contact pins prior to reinstalling.

2.14 Continue tightening the jacking screws a quarter-turn at a time (still alternating in a criss-cross manner) until a mounting torque of 8.5 to 9.5 inch-pounds has been attained. Note: Before reaching final torque, insure that there is an approx. uniform clearance between outer frame and bevel portion of glass.

2.15 Clean the area of the pushbutton switches and indicators to insure that they are free of dust, silicone compound, and any foreign matter. Use Freon TF and cotton swabs.

2.16 Assemble the Front Cover Assembly (retained from step 2.5) to the Front Housing with eight socket head screws and flat washers (retained from step 2.4) by first lowering the Front Cover carefully into place on the Front Housing and then installing the screws and washers.

CAUTION:

Ensure that dowel pins are properly aligned before proceding.

2.17 Torque the eight socket head screws 8 to 9 inch-pounds starting with the center screw and working around the perimeter of the cover until all screws are torqued down.

3. Install the DSKY to the Handling Fixture (if applicable) using hardware retained from 2.1 and reversing the procedure in that step.

4. Retest Procedures:

Field site personnel will perform such tests as necessary to insure that all figures and digits on the E/L Indicator energize correctly after completion of this retrofit.

VIII. MODIFICATION DESIGNATION:

1. Remove from retrofit kit the new nameplate (1004260-20) and four screws (MS35216-1).

2. Using a stamping set, stamp "AGC DSKY," the applicable serial numbers (reference step 1.5), and the part numbers as follows:

2003994-061 becomes 2003994-081
2003994-071 becomes 2003994-091
2003994-041 " " -111
2003994-051 " " -121

NOTE: Characters and digits are to be .08/.10 inches high per ND 1002019 and ND 1002023.

3. Remove existing nameplate and clean the area with Freon TF and cotton swabs. Dispose of removed nameplate per Paragraph IX of this RIB.

4. Install the new nameplate in the same location and insert the four screws with a few turns. Apply sealing compound (LOCKTITE), part no. 1008953-003, provided in kit, to the threads and then torque the screws down 2.0 to 2.5 inch-pounds. Clean away any excess compound that might have been squeezed out.

IX. DISPOSITION OF REMOVED PARTS:

1. Removed E/L and Cover Assembly, and its attached hardware is to be shipped to Raytheon, Waltham. Pack for shipment per ND 1002214.

2. Removed nameplate and its associated screws is to be scrapped.

X. REPORT OF ACCOMPLISHMENT:

Complete the following forms and forward to addressees:

1. AC Form 1 (revised), page 9 of this RIB.

2. Raytheon Form 53-9208 (Attachment A of this RIB).

ACC Form 1 (Revised)

REV. A

I. PURPOSE

This RIB provides retrofit instructions for Azimuth Reference Fixture, NASA part number 1017382. The retrofit will increase reliability in the equipment by prevention of possible deterioriation in alignment after check out due to vibration and handling shock.

II. AUTHORITY

This retrofit is authorized by Contract & CCB Action

III. UNITS AFFECTED

NAME	PART NUMBER	RETROFIT SERIAL NUMBERS	NEW PART NO. OR MD MARK
Azimuth Ref. Fix.	1017382	1, 2, and 3	1017382-011

5.	1	Punch, drift, steel, 1/8" dia.	N/A
6.	1	Hammer, 16 oz.	N/A
7.	1	Vacuum Cleaner-Portable	N/A

VII. PROCEDURE

A. General

1. Check SIDL for latest revision of this RIB.
2. Read and understand complete procedure prior to attempting retrofit. No deviation should be made from procedure outlined herein.
3. All workmanship shall meet standards defined in "Workmanship Standard" AC-STD-1 dated 15 January 1965.

B. Perform the following step by step tasks to remove the Mounting Bracket, NASA P/N 1019228 (with components still assembled, unless otherwise noted below) from the mounting Plate, NASA P/N 1019229 of the Mount Assembly (Porro Prism) NASA P/N 1019761, located on the Azimuth Reference Fixture, NASA P/N 1017382.

1. Remove Dust Cover, NASA P/N 1019231 by removing three (3) Cap, Hex, Soc. Screws, NASA P/N 1017418-18 and three (3) Lockwashers P/N MS 35338-80.
2. Loosen the two (2) Plunger, Quick Release Screws, NASA P/N 1017419-3.
3. Rotate Prism Housing, NASA P/N 1019230 so that face of Porro Prism is facing up, and remove the three (3) Clamps, P/N 1019232 by removing six (6) Cap, Hex. Soc. Screws NASA P/N 1017418-8 and six (6) Lockwashers P/N MS 35338-80.

TDRR NO. 20035
REV. A

[illegible] Remove [illegible], NASA P/N 1019237 from Prism Housing, [illegible] and prepare Porro Prism for shipment.

[illegible] Replace [illegible] clamps, six (6) screws and washers removed in [illegible] "V" Block, NASA P/N 1019233 in Prism Housing, [illegible] by wrapping with lens tissue and friction tape [illegible].

[illegible] Using the drift pin, remove two (2) Dowel Pins, NASA P/N 1019384-1 from the underside of Mounting Plate, NASA P/N 1019229; then remove [illegible] (2) Cap, Hex. Soc. Screws, NASA P/N 1017418-35 and two (2) Lockwashers P/N MS 35338-82. Prepare this partial assembly for shipment.

C. Perform the following step by step tasks to install Porro Prism Sub-Assembly, [illegible]-011 on Mounting Plate, NASA P N 1019229, of Azimuth Reference [illegible] NASA P N [illegible]-011.

1. Perform visual inspection of kit.

2. Mount Porro Prism Sub-Assembly, NASA P/N 1022930-011 (less Porro Prism and "V" Block) contained in this kit, on Mounting Plate, NASA P/N 1019229; align the two screw holes and the two dowel holes by eye and secure subassembly with two (2) Cap, Hex., Soc. Screws, NASA P/N 1017418-35 as shown in Mount Assembly, NASA P/N 1019761-011.

NOTE: Do not use oil for the next operation.

3. Transfer drill and ream two holes thru the Mounting Bracket, NASA P N [illegible] and the Mounting Plate, NASA P/N 1019229, with drill and reamer provided in kit.

4. Vacuum clean all chips. Press fit two (2) Dowel Pins NASA P/N [illegible]-3 into Mounting Plate and Mounting Bracket to dimension shown in Dwg. No. 1019761-011.

Rev. —

I. PURPOSE

This RIB provides retrofit instructions for Azimuth Reference Fixture, NASA part number 1017382-011. The retrofit will increase reliability in the equipment by prevention of possible deterioration in alignment after check out due to vibration and handling shock.

II. AUTHORITY

This retrofit is authorized by Contract & CCB Action

III. UNITS AFFECTED

8106002	Retrofit Kit Dwg. for Azimuth Reference Fixture 1017382-011

VI. MATERIAL REQUIRED

A. One retrofit kin P/N 1022931 consisting of the following:

ITEM	QUANTITY	NOMENCLATURE	PART NUMBER
1.	2	Pin, Straight Headless-Oversize	1019384-3
2.	1	Porro Prism Sub-Assembly	1022930-011
3.	1 Pack	Lens Tissue	N/A
4.	1 Roll	Electric Friction Tape	N/A
5.	4 oz.	Isopropyl Alcohol	N/A
6.	1	Stamp, metal 1/8" high, numeral one (1)	N/A
7.	1	Stamp, metal 1/8" high, numeral zero (0)	N/A
8.	1	Stamp, metal, dash (-)	N/A
9.	1	Retrofit Instruction Bulletin	0106001

B. Special Tools required but not supplied in kit:

RIB NO. 0106001
Date 25 May 1965
TDRR NO. 20035
Rev. —

ITEM	QUANTITY	NOMENCLATURE	PART NUMBER
1.	1	Drill, hand, power 1/4" dia.	N/A
2.	1	Bit, drill .218 dia.	N/A
3.	1	Reamer .2194 $^{+0005}_{-0000}$ dia.	N/A
4.	1	Wrench, Allen, 3/16 soc.	N/A
5.	1	Punch, drift, steel, 1/8" dia.	N/A
6.	1	Hammer, 16 oz.	N/A
7.	1	Vacuum Cleaner-Portable	N/A

VII. PROCEDURE

A. General

1. Check SIDL for latest revision of this RIB.
2. Read and understand complete procedure prior to attempting retrofit. No deviation should be made from procedure outlined herein.
3. All workmanship shall meet standards defined in "Workmanship Standard" AC-STD-1 dated 15 January 1965.

B. Perform the following step by step tasks to remove the Mounting Bracket, NASA P/N 1019228 (with components still assembled, unless otherwise noted below) from the mounting Plate, NASA P/N 1019229 of the Mount Assembly (Porro Prism) NASA P/N 1019761, located on the Azimuth Reference Fixture, NASA P/N 1017382.

1. Remove Dust Cover, NASA P/N 1019231 by removing three (3) Cap, Hex, Soc. Screws, NASA P/N 1017418-18 and three (3) Lockwashers P/N MS 35338-80.
2. Loosen the two (2) Plunger, Quick Release Screws, NASA P/N 1017419-3.
3. Rotate Prism Housing, NASA P/N 1019230 so that face of Porro Prism is facing up, and remove the three (3) Clamps, P/N 1019232 by removing six (6) Cap, Hex. Soc. Screws NASA P/N 1017418-18 and six (6) Lockwashers P/N MS 35338-80.

4. Remove Porro Prisms, NASA P/N 1019227 from Prism Housing, NASA P/N 1019230 and prepare Porro Prism for shipment.

5. Replace three (3) clamps, six (6) screws and washers removed in Step 3, and secure "V" Block, NASA P/N 1019233 in Prism Housing, NASA P/N 1019230, by wrapping with lens tissue and friction tape provided in kit.

6. Using the drift pin, remove two (2) Dowel Pins, NASA P/N 1019384-1 from the underside of Mounting Plate, NASA P/N 1019229; then remove two (2) Cap, Hex. Soc. Screws, NASA P/N 1017418-35 and two (2) Lockwashers P/N MS 35338-82. Prepare this partial assembly for shipment.

C. Perform the following step by step tasks to install Porro Prism Sub-Assembly, NASA P/N 1022930-011 on Mounting Plate, NASA P/N 1019229, of Azimuth Reference Fixture, NASA P/N 1017382-011.

1. Perform visual inspection of kit.

2. Mount Porro Prism Sub-Assembly, NASA P/N 1022930-011 (less Porro Prism and "V" Block) contained in this kit, on Mounting Plate, NASA P/N 1019229; align the two screw holes and the two dowel holes by eye and secure sub-assembly with two (2) Cap, Hex., Soc. Screws, NASA P/N 1017418-35 as shown in Mount Assembly, NASA P/N 1019761-011.

NOTE: Do not use oil for the next operation.

3. Transfer drill and ream two holes thru the Mounting Bracket, NASA P/N 1019228 and the Mounting Plate, NASA P/N 1019229, with drill and reamer provided in kit.

4. Vacuum clean all chips. Press fit two (2) Dowel Pins NASA P/N 1019384-3 into Mounting Plate and Mounting Bracket to dimension shown in Dwg. No. 1019761-011.

5. Remove three (3) Clamps, NASA P/N 1019232 from Prism Housing, NASA P/N 1019230-011 by removing six (6) Cap, Hex. Soc. Screws, NASA P/N 1017418-18 and six (6) Lockwashers P/N MS 35338-80

6. Carefully insert "V" Block, NASA P/N 1019233-011 in groove of Prism Housing, NASA P/N 1019230-011, install Porro Prism supplied with the kit and secure in place by replacing clamps, screws and washers removed in Step C-5 Above.

7. Tighten two (2) Plunger, Quick Release Screws, NASA P/N 1017419-3 so that the plunger spring load is bearing against "V" Block.

8. Clean Porro Prism with isopropyl alcohol and lens tissues.

9. Complete certification and alignment in accordance with FTM 1017382.

D. Perform the following procedure to retrofit Identification Plate, NASA P/N 1019262-011 on Azimuth Reference Fixture, NASA P/N 1017382 to 1017382-011

1. Metal Stamp the characters -011 after part number 1017382 on Identification Plate NASA P/N 1019262

VIII. MODIFICATION DESIGNATION

P/N on Name Plate changes from 1017382 to 1017382-011

IX. DISPOSITION OF PARTS REMOVED

Package and return to KIC Assembly Parts to rework and install on another serial number.

VI. MATERIAL REQUIRED

A. One Retrofit Kit P/N 8106003 consisting of the following:

ITEM	QUANTITY	NOMENCLATURE	PART NUMBER
1.	1	Alignment Certification Fixture	1017387-011
2.	1	Theodolite Stand Assy.	1022831-011
3.	1	Retrofit Instruction Bulletin (RIB)	0106002
4.	1	Autocollimator and Telescope Zero	JDC 02839
5.	1	Test-Vertical Position with Theodolite	JDC 02840
6.	1	Azimuth Monitor Mirror Assy	1022953-011

VII. PROCEDURE

A. General

1. Check SIDL for latest revision of this RIB.
2. Read and understand complete procedure prior to attempting retrofit. No deviation should be made from procedure outlined herein.
3. All workmanship shall meet standards defined in Workmanship Standard AC-STD-1 dated 15 January 1965.
4. Perform visual inspection of all parts in kit.

B. Perform the following step by step tasks to accomplish retrofit of Alignment Certification Fixture P/N 1017387-011 utilizing Kit P/N 8106003.

1. Remove Alignment Certification Fixture P/N 1017387 from its installed position. Package and pack in accordance with JDC 03191 for shipment to KIC.

VII. PROCEDURE

B. (Continued)

2. Unpack modified Alignment Certification Fixture P/N 1017387-011, and place upon suitable stable surface.
3. Unpack Azimuth Monitor Mirror Assembly P/N 1022953-011 and mount upon Alignment Certification Fixture, P/N 1017387-011, utilizing eccentric stud, P/N 1022503 and furnished hardware (2 each clamp screws; 3 each bolts; 5 each washers).
4. Unpack Theodolite Stand Assembly P/N 1022831-011 and place adjacent to Alignment Certification Fixture as indicated in JDC 02840.
5. Verify proper operation of modified Alignment Certification Fixture by performing certification of AMA P/N 1016951 in accordance with JDC's 02839 and 02840.

Note: Theodolite Stand Assembly NASA P/N 1022831-011 is required for performance of JDC 02840.

VIII. MODIFICATION DESIGNATION

P/N on Nameplate changes from 1017387 to 1017387-011.

IX. DISPOSITION OF PARTS REMOVED

Return to KIC for rework.

3. Rotate Prism Housing, NASA P/N 1019230 so that face of Porro Prism is facing up, and remove the three (3) Clamps, P/N 1019232 by removing six (6) Cap, Hex. Soc. Screws NASA P/N 1017418-18 and six (6) Lockwashers P/N MS 35338-80.
4. Remove Porro Prisms, NASA P/N 1019227 from Prism Housing, NASA P/N 1019230 and prepare Porro Prism for shipment.
5. Replace three (3) clamps, six (6) screws and washers removed in Step 3, and secure "V" Block, NASA P/N 1019233 in Prism Housing, NASA P/N 1019230, by wrapping with lens tissue and friction tape provided in kit.
6. Using the drift pin, remove two (2) Dowel Pins, NASA P/N 1019384-1 from the underside of Mounting Plate, NASA P/N 1019229; then remove two (2) Cap, Hex. Soc. Screws, NASA P/N 1017418-35 and two (2) Lockwashers P/N MS 35338-82. Prepare this partial assembly for shipment.

C. Perform the following step by step tasks to install Porro Prism Sub-Assembly, NASA P/N 1022930-011 on Mounting Plate, NASA P/N 1019229, of G&N Installation Qualification Fixture, NASA P/N 1017383-011.
   1. Perform visual inspection of kit.

RIB NO. 0106005
DATE June 15, 1965
TDRR NO. 20913
REV. ---

2. Mount Porro Prism Sub-Assembly, NASA P/N 1022930-011 (less Porro Prism and "V" Block) contained in this kit, on Mounting Plate, NASA P/N 1019229; align the two screw holes and the two dowel holes by eye and secure sub-assembly with two (2) Cap, Hex., Soc. Screws, NASA P/N 1017418-35 as shown in Mount Assembly, NASA P/N 1019761-011.

   NOTE: Do not use oil for the next operation.

3. Transfer drill and ream two holes thru the Mounting Bracket, NASA P/N 1019228 and the Mounting Plate, NASA P/N 1019229, with drill and reamer provided in kit.
4. Vacuum clean all chips. Press fit two (2) Dowel Pins NASA P/N 1019384-3 into Mounting Plate and Mounting Bracket to dimension shown in Dwg. No. 1019761-011.
5. Remove three (3) Clamps, NASA P/N 1019232 from Prism Housing, NASA P/N 1019230-011 by removing six (6) Cap, Hex. Soc. Screws, NASA P/N 1017418-18 and six (6) Lockwashers P/N MS 35338-80.
6. Carefully insert "V" Block, NASA P/N 1019233-011 in groove of Prism Housing, NASA P/N 1019230-011, install Porro Prism supplied with the kit and secure in place by replacing clamps, screws and washers removed in Step C-5 above.

RIB NO. 0106005

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) provides instructions for modifying the Optics-Navigation Base Shipping Container, NASA P/N 1019720. The changes consist of the following:

a. Stripping and refinishing various parts of the Shipping Container in order to obtain greater resistance to corrosion (some parts to be replaced).

b. Cutting and enameling a groove in the flanges of the Inner Container to assure that the Upper Container is assembled to the Lower Container in the proper position.

c. Machining the bores of the Bellows Retainer Plate to an increased diameter to allow for the addition of protective covers on the SCT and SXT.

d. Changing the Warning designation to a Caution designation to provide a better description of pressure release inside of the Inner Container required before removing the Upper Container from the Lower Container.

e. Providing storage space in the Inner Container for two (2) Guide Plates that are to be used to cover the openings in the OUA when the Eyepiece Assemblies are removed from the OUA.

II. AUTHORITY

This retrofit is authorized by ECP 293

VI. MATERIAL REQUIRED

A. One (1) Retrofit Kit P/N 8106034 ~~Rev. A~~

B. Special tools or equipment required but not supplied in kit:

1. Paint, Cashmere Blue per dwg no. 1016194.
2. Jig Borer.
3. White Enamel per TT-E-489, Color No. 17875 per Fed Std 595.
4. Adhesive per MIL-A-5092 Butadiene acrylonitrile (Buna N) rubber base, fuel resistant.

VII. PROCEDURE

A. General

1. Assemble all drawings listed or referenced before initiating retrofit. No deviation shall be made from the procedure specified in this RIB.

2. AC-STD-1, "General Workmanship", shall be applicable where such a requirement has not been placed by a drawing, ND, or equivalent KIC specification.

* Also listed in RIB No. 0106019 and /or 0106020

B. Rework Procedure

1. See RIB No. 0106020, Paragraph VII.B, steps 1 through 3. After completion of steps 1 through 3, perform step 2 of RIB No. 0106021.

   NOTE: Steps 2 through 7 of RIB No. 0106021 may be performed concurrently with steps 2 through 6 of RIB No. 0106020.

2. See dwg. 1019665, sheet 2, Section B-B. Disassemble Bellows Retainer Plate, item no. 5, from Lower Container, item no. 1, by removing four (4) each Screws, Flat Washers, and Lock Washers, item nos. 22, 66, and 23, respectively. Place Bellows Retainer Plate in plastic bag.

3. See dwg. 1019665, sheet 2, Details D-D and E-E. Remove thirty (30) Captive Screws, item no. 14, from Upper Container, item no. 2. Place parts in plastic bags.

4. See dwg. 1019665, sheet 1, right side view. Remove Humidity Indicator Plug, item no. 10 from Upper Container, item no. 2. Place part in plastic bag.

5. See dwg. 1019667, sheet 1, front view. Drill twelve (12) Clinch Nuts, item no. 11, to remove them from Upper Container. Use portable drill.

6. See dwg. 1019667, sheet 2, Partial Section A-A. Drill six (6) Clinch Nuts, item no. 12, to remove them from Upper Container. Use portable drill.

7. See dwg. 1019672. Remove four (4) Quick Release Self Locking Pins, item no. 3, and four (4) Nuts, item no. 8, from Support Frame, item no. 1. Place parts removed in plastic bags.

8. See RIB No. 0106020, Paragraph VII. B, steps 7 and 8. See dwg. 1019687, sheet 1. Remove Clamp and Screw, item nos. 5 and 6 from Cover. Drill eleven (11) Clinch Nuts, item no. 3, and one (1) Clinch Nut, item no. 4, to remove them from Cover. Place Clamp and Screw, items 5 and 6 in plastic bag.

9. See RIB No. 0106020, Paragraph VII. B, steps 7 and 8. See dwg. 1019685, sheet 2. Drill four (4) holes marked "A" (7/32 thru).

NOTE: These holes are in addition to one "A" hole already in cover.

Re-identify part, per Note 3 of dwg, as P/N 1019685-001.

10. See dwg. 1019665, sheet 3. File two (2) grooves in flange of Inner Container to 6.750 ±.125, .125/.156, and .062/.094. dimensions.

11. Remove burrs from filed grooves in accordance with ND 1002079. Clean with Freon TF.

12. Rework Bellows Retainer Plate, P/N 1019673 in accordance with dwg. 1019673-001. Machine bores "A" and "B", per Notes 4 and 5 of drawing. Clean with Freon TF. Repaint, as required, per Note 2 of drawing. Re-identify part, per Note 3 of drawing, as P/N 1019673-001. Place part in plastic bag.

---

13. See dwg. 1019667, sheet 1. Press and swage twelve (12) Clinch Nuts, item no. 11 (obtain Clinch Nuts from Retrofit Kit), to assemble them to the Support, item no. 6.

14. See dwg. 1019667, sheet 2, Partial Sections A-A and D-D. Press and swage six (6) Clinch Nuts, item no. 12 (obtain Clinch Nuts from Retrofit Kit) to assemble them to the Support.

15. See RIB No. 0106020, Paragraph VII. B, steps 7 and 8. See drawing 1019687, sheet 2. Press and swage eleven (11) Clinch Nuts, item No. 3, and one (1) Clinch Nut, item No. 4 (obtain Clinch Nuts from Retrofit Kit) to assemble them to Cover, item No. 1.

16. Paint assembly (step 15), as required per Note 3 of drawing. Re-identify assembly, per note 4 of drawing, as P/N 1019687-011.

17. See drawing 1019665, Sheet 4. Assemble thirty (30) Captive Screws, item #71 (reworked per drawing 1019689-001) to Upper Container, item No. 2.

18. See drawing 1019665, Sheet 3. Assemble Humidity Indicator, Item No. 10 (reworked per drawing 1019663-001) to Upper Container, item No. 2.

19. See drawing 1019665, sheet 1. Remove Identification Plate, item No. 45.

20. See drawing 1019665, sheet 3. Cement Identification Plate, item No. 70, (obtain Identification Plate from Retrofit Kit) to Upper Container, per Note 3 of drawing.

NOTE: Serialize per Note 4 of drawing.
Inner Container to be reidentified as P/N 1019665-011.

21. See RIB No. 0106020, Paragraph VII. B., steps 10 through 12. After completion of the above steps (10 through 12), assemble, in accordance with drawing 1019665, sheet 4, Plate Guides, item Nos. 80 and 87 to the Hinge and Cover Assembly, with four (4) each Screws, Nuts, and Washers, item Nos. 81, 82 and 83, respectively (obtain Plate Guides, Screws, Nuts, and Washers from Retrofit Kit). Assemble one (1) each Clamp and Screw, item Nos. 85 and 86, respectively, to Hinge and Cover Assembly (See Step 8.)

---

22. Perform step 13 of Paragraph VII. B. RIB No. 0106020.

23. Assemble Bellows Retainer Plate, item No. 72 of drawing 1019665, sheet 4, to Lower Container, item No. 1.

24. See drawing 1019665, sheet 4. Assemble Upper Container, item No. 2, to Lower Container, Item No. 1, with thirty (30) Captive Screws, Item No. 71.

25. See drawing 1019667, sheet 3. Stencil Upper Container " CAUTION" designation per ND 1002019. Reidentify Upper Container per Note 8 of drawing, as P/N 1019667-011.

26. See drawing 1019665, sheet 3. Fill grooves in Inner Container, per Note 5 of drawing.

NOTE: Grooves were cut in step 10.

27. See drawing 1019672. Assemble four (4) Screws, item No. 6 to Frame Support Assembly, with four (4) each Washers and Nuts, items Nos. 7 and 10, respectively. Obtain Nuts from Retrofit Kit.

28. See drawing 1019677. Assemble four (4) Cables item no. 4 to four (4) Quick Release Locking Pins, item no. 3.

29. See drawing 1019672. Assemble four (4) Quick Release Self Locking Pin Assemblies, item No. 3 (step 28) for Frame Support Assembly with four (4) Screws, item No. 5. Reidentify assembly, per note 2 of drawing, as P/N 1019672-011.

30. Perform steps 9 through 13, Paragraph VII. B. of RIB 0106019.

31. See drawing 1019720. Remove Identification Plate, item No. 10, and replace with Identification Plate, item No. 14.

NOTE: Shipping Container is to be reidentified as P/N 1019720-011.

32. Perform test per RIB No. 0106019, Paragraph VII. C.

VIII. MODIFICATION DESIGNATION

The Optics-Navigation Base Shipping Container is reidentified as P/N 1019720-011.

IX. DISPOSITION OF PARTS REMOVED

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) provides instructions for modifying the LEM-Alignment Optical Telescope Shipping Container, NASA P/N 6014000. This change incorporates the addition of a Shock Recorder to each shipping container. The recorder is required for measuring and recording the shock loads to which the shipping container is subjected during transit.

II. AUTHORITY

This retrofit is authorized by ECP 075.

III. UNIT AFFECTED

Name	Part No.	New Part No.	S/N	KIT P/N
LEM-Alignment Optical Telescope Shipping Container	6014000-000	6014000-011	1 ~~and 2~~	8106037

IV. PRIORITY CHANGES

None

V. RELATED CHANGES

None

VI. MATERIAL REQUIRED

a. One (1) Retrofit Kit P/N 8106037

b. Special tools or equipment required but not supplied in kits:

1. Spintite Nut Driver, 5/16 in.
2. Screw driver slotted, 1/4" width
3. Ham~~er~~mer, plastic head, 2 in. dia.

RIB NO. 0106023
DATE: February 8, 1966
TDRR NO. 26838
REV. -

Sheet 3 of 4

4. Plastic sheet, approximately 6 in. x 6 in. x 1/8 in. thick

VII PROCEDURE

A. General

1. Assemble all drawings listed or referenced before initiating retrofit. No deviation shall be made from the procedure specified in this RIB.
2. AC-STD-1 "General Workmanship" shall be applicable where such a requirement has not been placed by a drawing, ND, or equivalent KIC specification.

REVISED PARTS

Part No.	Nomenclature	Revised From	Revised To
6014000	LEM Alignment Optical Telescope Shipping Container	-000	-011
1004260-307	Nameplate	-000	-011

B. Rework Procedure

1. See drawing 6014000-011 sheets 1 and 4 for item number reference. Remove Bracket Assembly P/N 6014055-011 (item 24), Shock Recorder P/N 1897338-003 (item 22), and Nuts, Self-Locking, P/N 1016151-006 (item 23) from Retrofit Kit.
2. Using a screwdriver and Spintite Nut Driver, assemble the Shock Recorder to the Bracket Assembly. See drawing 6014000-011, sheet 4 for reference.
3. See drawing 6014000-011 sheets 1 and 4 for item number reference. Remove Screws - Hex Head P/N 1015836-332 (item 25) and Washers Flat P/N AN 960-C10L (item 26) from Retrofit Kit.
4. Using the Spintite Nut Driver, fasten Bracket Assembly (with Shock Recorder now mounted) to the AOT Mounting Plate P/N 6014000-3 (item 3). See drawing 6014000-011, sheets 1 and 4 for reference.

RIB NO. 0106023
DATE: February 8, 1966
TDRR NO. 26838
REV. -

Sheet 4 of 4

5. Test operation of the Shock Recorder in the following manner:
   - a. Using the plastic head hammer, strike the AOT Mounting Plate at one end with a sharp hammer blow. Observe the functioning of the Shock Recorder.
   - b. Repeat Step (a) with a sharp hammer blow at one side of the AOT Mounting Plate.
   - c. Repeat Step (a) with a sharp hammer blow at top of the AOT Mounting Plate.

   CAUTION: Protect finish of the AOT Mounting Plate by placing plastic sheet on area of hammer impact, steps a, b and c.
6. See drawing 6014000-000, sheet 3. Remove Identification Plate item 15 and replace with Identification Plate from Retrofit Kit, P/N 1004260-307.

C. Shipping Container Post-Retrofit Test

Perform visual and mechanical inspection in accordance with JDC's 03504 and JDC 03505.

VIII. MODIFICATION DESIGNATION

Reidentify the modified LEM-Alignment Optical Telescope Shipping Container as P/N 6014000-011.

I. PURPOSE

The purpose of this Retrofit Instruction Bulletin (RIB) is to replace the molded strain isolation pressure seal manufactured of vulcanized fluorosilicone rubber with a molded strain isolation pressure seal manufactured of thermoplastic urethane rubber. The new seal material is being changed to meet new strength and durability requirements. Its reliability is expected to be significantly greater.

II. AUTHORITY

This retrofit is authorized by ECP 353F, CCA 497-0237-R1.

III. UNITS AFFECTED

LEM Alignment Optical Telescope (AOT) 602, serial number 8, part number 6011000-011. The new part number upon completion of the RIB will be 6011000- 012.

IV. PRIORITY CHANGES

None

V. RELATED CHANGES

None

VI. MATERIAL REQUIRED

A. One (1) retrofit kit, P/N 8106046.

B. Special tools

Allen Wrench, No. 6
Micrometer, 1-inch
Camel hair paint brush
2 oz. can of paint per drawing 1012543-003

VII. PROCEDURE

A. General

1. Check SIDL for latest revision of RIB.
2. Assemble and read all drawings listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.
3. AC-STD-1, General Workmanship, shall be applicable where such a requirement has not been replaced by a drawing, ND, or equivalent KIC Specification.

B. Revised Parts

PART NO.	NOMENCLATURE	NEW P/N
6011096	Strain Isolation Pressure Seal	6011143

C. Disassembly Procedures

Remove Isolation Strain Pressure Seal, P/N 6011096, in accordance with drawing 6011000-011

PART NO.	PARTS DISPOSITION NOMENCLATURE	DISPOSITION
6011096	Strain Isolation Pressure Seal	See Para. IX

D. Assembly Procedures

Assemble Strain Isolation Pressure Seal, P/N 6011143, in accordance with drawing 6011000-012. After completion of assembly, touch up with paint in accordance with drawing 6011000-012.

VIII. MODIFICATION DESIGN

Reidentify the LEM Alignment Optical Telescope (AOT) as P/N 6011000-012 in accordance with ND 1002019. Metal stamp the characters on the new identification plate P/N 1004260-350 and assemble in accordance with 6011000-012.

IX. DISPOSITION OF PARTS REMOVED

All parts removed and replaced shall be packaged in accordance with ND 1002214.
Store packaged parts in the NASA approved bond room to await disposition.

X. REPORT OF ACCOMPLISHMENT

Complete ACC Form No. 1, Retrofit or Repair Compliance Report, dated 2/23/66, and forward through channels as instructed by the form.

c. Drawings and documents required

1) 8106049
2) 1019837
3) JDC 02820
4) MILP-19834

VII. PROCEDURE

A. General

1. Read and assemble all drawings listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.

2. AC-STD-1, General Workmanship shall be applicable where such a requirement has not been placed by a drawing or ND.

B. Rework Procedure

1. Disconnect the Electrical Power Supply Cord on the base of the Illuminator, PN 1001674, from the 115 volts, 60 cps power source.

2. Remove the Identification Plate, PN 1019307-001, in accordance with drawing 1019837-011, and dispose of the part in accordance with paragraph 1X of this RIB.

3. Clean the exposed surface of the glass diffuser on the light source of the Illuminator, PN 1001674, in accordance with JDC 02820.

NOTE: The required items of the optics cleaner kit, PN 1019984-011, or equivalent shall be used for the cleaning operation of paragraph VII.B.5.

Sheet 4 of 5

4. Assemble the SXT Eyepiece Adapter, PN 1022659 (from retrofit kit), to the mount assembly, PN 1019783, in accordance with drawing 1019837-021.

5. Assemble the Identification Plate, PN 1018307-002 (from retrofit kit), in accordance with drawing 1019837-021.

NOTE: Apply the Identification Plate to the Illuminator, PN 1001674, in accordance with MIL-P-19834.

6. Visually inspect the Portable Light Assembly for proper assembly of its various components.

7. Connect the Electrical Power Supply Cord of the base of the Illuminator, PN 1001674, to a 115 volts, 60 cps power source.

8. Turn the knob of the light intensity control on the base of the Illuminator, PN 1001674, from OFF to positions 1, 2, and 3. Verify that lamp lights and that light intensity varies.

9. Turn the knob (paragraph VII.B.11) to OFF. Disconnect the Electrical Power Supply Cord (paragraph VII.B.10).

VIII. MODIFICATION DESIGNATION

The retrofitted Portable Light Assemblies are reidentified as PN 1019837-021, SN's KIC 5 through KIC 9. The modification designations are accomplished in paragraph VII.B.7 by assembling an Identification Plate, PN 1019307-002 (from retrofit kits) to each Portable Light Assembly. Each Identification Plate is engraved with the required part number, serial number, and contract numbers.

IX. DISPOSITION OF PARTS REMOVED

1. Identification Plate, PN 1019307-001
    - removed in paragraph VII.B.4
    - one per Portable Light Assembly
    - Scrap

X. REPORT OF ACCOMPLISHMENT

Complete ACC Form No. 1 and 1A, Retrofit Compliance Report, dated 2-23-66, and distribute as specified on the form.

VII. PROCEDURE

A. General

1. Read and assemble all drawings listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.
2. AC-STD-1, General Workmanship shall be applicable unless otherwise specified by a NASA Document ND.

B. Rework Procedure

1. Disconnect the Electrical Power Supply Cord on the base of the Illuminator, PN 1001674, from the 115 volts, 60 cps power source.
2. Remove the Identification Plate, PN 1019307, in accordance with drawing 1019837-000 and dispose of the part in accordance with paragraph IX of this RIB.
3. Clean the exposed surface of the glass diffuser on the light source of the Illuminator, PN 1001674, in accordance with JDC 02820.

   NOTE: The required items of the optics cleaner kit, PN 1019984-011, or equivalent shall be used for the cleaning operation of paragraph VII.B.3.

4. Assemble the SXT Eyepiece Adapter, PN 1022659 (from retrofit kit), to mount assembly, PN 1019783, in accordance with drawing 1019837-031.
5. Assemble the Identification Plate, PN 1019307-003 (from retrofit kit), in accordance with drawing 1019837-001.

   NOTE: Apply the Identification Plate to the Illuminator, PN 1001674, in accordance with MIL-P-19834.

---

6. Visually inspect the Portable Light Assembly for proper assembly of its various components.
7. Connect the Electrical Power Supply Cord of the base of the Illuminator, PN 1001674, to a 115 volts, 60 cps power source.
8. Turn the knob of the light intensity control on the base of the Illuminator, PN 1001674, from OFF to positions 1, 2, and 3. Verify that lamp lights and that light intensity varies.
9. Turn the knob (paragraph VII.B.8) to OFF. Disconnect the Electrical Power Supply Cord (paragraph VII.B.7).

VIII. MODIFICATION DESIGNATION

The retrofitted Portable Light Assemblies are reidentified as PN 1019837-031, SN's KIC 1 through KIC 4. The modification designations are accomplished in paragraph VII.B.5 by assembling an Identification Plate, PN 1019307-003, which is engraved with the required part number, serial number, and contract number.

IX. DISPOSITION OF PARTS REMOVED

1. Identification Plate, PN 1019307
   - removed in paragraph VII.B.2
   - one per Portable Light Assembly
   - scrap

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) contains instructions for modifying the Alignment Optical Telescopes (AOT) listed in paragraph III. A Lamp Assembly Protective Cover, 6011230, and Protective Heater Cover, 6011231 is added to the Alignment Optical Telescope (AOT). The addition of the protective covers to the AOT will prevent damage to heater blanket and add a flame resistant barrier over the reticle lamp assembly.

II. AUTHORITY

This retrofit is authorized by ECP-633.

III. UNITS AFFECTED

Name	LEM	SN	Pre-Retrofit PN	Post-Retrofit PN	Retrofit Kit PN
AOT	612	018	6011000-071	6011000-072	8106073

IV. PRIORITY CHANGES

None.

V. RELATED CHANGES

None.

VI. MATERIAL REQUIRED

A. One retrofit kit, PN 8106073
B. Special tools or equipment required but not supplied in the retrofit kit:
1. Freon TF, E.I. DuPont DeNemour Company or equivalent
2. Plastic gloves
3. Balance scale, ± 1% accuracy for full range of scale
4. Mixing containers for paint-glass, aluminum, or corrosion-resisting steel
5. Mixing spatulas-glass, aluminum, or corrosion-resisting steel
6. Paint brush, camel hair
7. Rubber stamp, numbers .187 inches high.

1. Drawing 6011000	4. Drawing 6011239
2. Drawing 6011230	5. ND 1002019
3. Drawing 6011231	6. ND1002345

VII. PROCEDURE

A. General
1. Assemble and read all drawings and documents listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.
2. AC STD-1, General Workmanship, shall be applicable where such a requirement has not been placed by a drawing or ND.

B. Rework Procedure
1. Using freon clean area of nameplate in area of configuration dash number.
2. Prepare a quantity of paint sufficient for painting over the configuration dash number by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-010 and 1 (one) gram catalyst, 1012546. Using camel hair brush paint over configuration dash number. Allow ink to air dry one half hour minimum. Proceed with following steps while ink dries.

CAUTION: The ink and catalyst listed above shall have a shelf life of 12 months minimum for ink or 6 months minimum for catalyst when stored in a clean tightly closed container at room temperature. Pot life (catalyzed) 4 hours.

3. Remove the five hex head cap screws securing the plate and lamp assembly to mirror housing and window assembly (see figure 1). Place hex head cap screws in box for later installation.

3a. Obtain from retrofit kit, cable washer, PN 6011248. Remove existing cable washer (PN 1011918-1) and install new cable washer in its place. (see Figure 1) Dispose of old cable washer in accordance with paragraph IX.

4. Obtain from retrofit kit lamp assembly protective cover, 6011230. Install protective cover over plate and lamp assembly. Align protective cover holes with holes in plate and lamp assembly. Install the five hex head cap screws 1011625-28, removed in paragraph B.3. Torque the hex head cap screws to 6.4 ± 0.5 inch-pounds.

5. Obtain from retrofit kit heater protective cover, 6011231 and grommet, 6011239. Loosen clamping screw and slide protective cover over AOT worm housing and heater assembly. Install grommet over heater wires. Align the two aft holes of the protective cover with lamp assembly protective cover. (See figure 1)

6. Obtain from retrofit kit two pan hd. cap screws (self-locking) NAS 1190CO4P4L. Install screws in holes on each side of heater protective cover. Torque the pan. hd. screws to 6.4 ± 0.5 inch-pound.

7. Torque the soc. hd. cap located on ring of heater protective cover to 6.4 ± 0.5 inch-pounds.

C. Identification Plate Marking

1. Prepare a quantity of ink sufficient for rubber stamping the configuration dash number listed in paragraph III. Thoroughly mix paint in the ratio of 8.5 grams ink, 1012545-001 and one (1) gram catalyst 1012546-001. Using rubber stamp, stamp the configuration dash number over the area where white ink was applied to nameplate. Allow to air dry one half hour minimum.

2. Visually inspect AOT for proper performance of retrofit.

VIII MODIFICATION DESIGNATION

The retrofitted AOT's are reidentified with new part numbers in accordance with paragraph III. The modification designation is accomplished in paragraphs VII by marking Identification Plate, PN 1004260-350. With new configuration dash number.

IX. DISPOSITION OF PART REMOVED

1. Cable Washer, 1011918-1
   -remove in paragraph VII B.3a
   -one per AOT
   -see Note 1

   NOTE: All parts removed and replaced shall be packaged in accordance with Federal Specification, PPP-B-601. Store packaged parts in a NASA approved bond room to await disposition as directed

X. REPORT OF ACCOMPLISHMENT

Complete ACC form 1 (Revised) Retrofit or Repair Compliance Report, dated 10/10/66, in accordance with ND 1002345.

XI. QUALITY ASSURANCE

The work accomplished by this RIB shall be inspected during and upon completion by a quality assurance representative to assure that the workmanship is commensurate with factory quality standards as a minimum.

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) contains instructions for modifying the Alignment Optical Telescope's (AOT's) listed in paragraph III. The retrofit consists of adding a Lamp Assembly Protective Cover, 6011230, and Protective Heater Cover, 6011231 is added to the AOT in place of thermal blankets. The retrofit also consists of adding a Pressure Seal, Flameguard Bellows Assembly, 6011869, around the AOT pressure seal. The bellows shall not be installed until such time as the AOT is being installed on the LM vehicle.

II. AUTHORITY

This retrofit is authorized by ECP-633.

III. UNITS AFFECTED

Page 4 of 10

3. Remove all AOT mounting screws for AOT pressure seal mounting flange except screws marked with "A". Observe relation of index mark to screws removed. (See figure 1.) Place screws in plastic box for later installation of bellows.
4. Obtain from retrofit kit, bellows assembly, 6011869. Slide bellow assembly over AOT outer tube seal flange from prism end.
5. Slide bellows assembly down over pressure seal and align index line on bellows assembly with existing index line on pressure seal. (See figure 1)
6. Obtain from retrofit kit split ring, 6011227 (-1 and -2), and six soc. hd. cap screws NAS 1352C02 LL3. Install split ring on lower portion of bellows assembly using the six soc. hd. cap screws. Torque screws to 1.8 ± 0.1 inch-pounds.
7. Install and secure AOT to spacecraft. Secure upper seal flange in accordance with "Grumman Aircraft Company's" prescribed installation procedure LID 280-10004 and ICD LIS 420-10004.
8. Wrap two (2) continuous layers of aluminum tape, 1008937-003, from retrofit kit around the upper exposed periphery of the pressure seal flange and adjacent spacecraft interfaced in accordance with GAEC ICD LID 420-10004.
9. Mount bellows assembly to AOT using the eight screws removed in step B.3. Torque all (12) twelve screws to 13.5 ± 0.5 inch-pounds using the tightening sequences as shown on drawing 6011000.

C. Rework Procedure (Protective Covers)

1. Remove the five hex head cap screws securing the plate and lamp assembly to mirror housing and window assembly (see figure 1). Place hex head cap screws in box for later installation.
2. Obtain from retrofit kit lamp assembly protective cover, 6011230. Install protective cover over plate and lamp assembly. Align protective cover holes with holes in plate and lamp assembly. Install the five hex head cap screws 1011625-28, removed in paragraph C.1. Torque the hex head cap screws to 6.4 ± 0.5 inch-pounds.
3. Obtain from retrofit kit heater protective cover, 6011231. Loosen clamping screw and slide protective cover over AOT worm housing and heater assembly. Align the two aft holes of the protective cover with lamp assembly protective cover. (See figure 2)
4. Obtain from retrofit kit two pan hd. cap screws (self-locking) NAS 1190C04P4L. Install screws in holes on each side of heater protective cover. Torque the pan. hd. screws to 6.4 ± 0.5 inch-pound.
5. Torque the soc. hd. cap located on ring of heater protective cover to 6.4 ± 0.5 inch-pounds.

D. Identification Plate Marking

1. Prepare a quanity of ink sufficient for rubber stamping the configuration dash number listed in paragraph III. Thoroughly mix paint in the ratio of 8.5 grams ink, 1012545-001. and one (1) gram catalyst 1012546. Using rubber stamp, stamp, the configuration dash number over the area where white ink was applied to nameplate. Allow to air dry one half hour minimum.
2. Visually inspect AOT for proper performance of retrofit.

VIII. MODIFICATION DESIGNATION

The retrofitted AOT's are reidentified with new part numbers in accordance with paragraph III. The modification designation is accomplished in paragraphs VII by marking Identification Plate, PN 1004260-350 with new configuration dash number.

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ________ Date: ________ G & N # 610

The following information must be submitted to Apollo Integrated Logistics Support, Dept. 38-05, AC Electronics, Milwaukee, upon the completion of any retrofit performed on Apollo GFP equipment or repair of Apollo Airborne GFP.

In Part I below, list all Apollo airborne GFP components that are repaired and all A/B and GSE MD symbols or P/N changes affecting subassembly and higher levels of equipment. List highest-to-lowest level of assembly order. All parts/assemblies added to or removed from airborne equipment shall be listed in Part II using the Part I Indent No. of the assembly affected as a cross reference.

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) contains instructions for modifying the Alignment Optical Telescopes (AOT) listed in paragraph III. The retrofit consists of removing Prism Shield, 6011163 and Prism Shield Spacer, 6011058 from the AOT and adding Sunshade and Radar Shield Assembly, 6011876 in place of Prism Shield and adding new Detent Calibration Plate, 6011252. The function of the Sunshade is to eliminate the effects of light scattering of the LM vehicle so star sightings can be made using the AOT. The function of the new detent calibration plate is to show calculated elevation and azimuth angle data for six (6) detent positions instead of three (3). This retrofit is to be accomplished after AOT is installed in LM vehicle.

II. AUTHORITY

This retrofit is authorized by ECP- 657 / CCA 497-0514

III. UNITS AFFECTED

Name	G&N	SN	Pre-Retrofit PN	Post-Retrofit PN	Retrofit Kit PN

IV. PRIORITY CHANGES

None

V. RELATED CHANGES

None

VI. MATERIAL REQUIRED

A. One retrofit kit, PN 8106076 & PN 8106086

B. Special tools or equipment required but not supplied in the retrofit kit.

1. Freon TF, E.I. DuPont DeNemour Company or equivalent
2. Balance scale, ±1% accuracy for full range of scale
3. Mixing containers for paint-glass, aluminum, or corrosion-resisting steel
4. Mixing spatulas-glass, aluminum, or corrosion-resisting steel
5. Paint brush, camel hair
6. Rubber stamp, numbers .125 inches high approx.
7. Razor blade
8. Tool kit consisting of the following items as a minimum,
    a. Torque screw driver 0-5 inch pounds minimum
    b. Allen head set with attachments to screw driver
    c. Feeler gauge in tenths and hundredths
9. AOT Sunshade Alignment Fixture, 6014064
10. Emery paper, zero grade.
11. Lint free cloth
12. Methyl Alcohol
13. Dust Cover Protective, Sunshade, 6014324
14. Paint roller, hard surface

C. Drawings and documents required:

1. Drawing 6011000
2. Drawing 6011876
3. ND 1002019
4. ND 1002219

VII. PROCEDURE

A. General

1. Assemble and read all drawings and documents listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.
2. AC STD-1, General Workmanship, shall be applicable where such a requirement has not been placed by a drawing or ND.

B. Rework Procedure

1. Remove AOT Protective Dust Cover 6014322. Using freon, clean area of AOT nameplate in area of configuration dash number.
2. Prepare a quantity of paint sufficient for painting over the configuration dash number by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-010 and 1 (one) gram catalyst, 1012546-001. Using camel hair brush paint over configuration dash number. Allow ink to air dry one half hour minimum. Proceed with following steps while ink dries.

    CAUTION: The ink and catalyst listed above shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tightly closed container at room temperature. Pot life (catalyzed) 4 hours.

3. Obtain new detent calibration plate, 6011252, from retrofit kit. Verify that the AZ and ELEV. values for F, L, R are the exact values as on old detent calibration plate on AOT.
4. Using tape, lint-free cloth, plastic gloves, and Freon TF per paragraph VI.B, mask and wipe the area of AOT, to which detent calibration plate, PN 6011252, will be cemented, in accordance with ND 1002219.

CAUTION: It shall be determined that the shelf life of 6 months has hot been exceeded before mixing the Base Resin "B" PN 1011541-1 and the Hardener Accelerator "A" PN 1011541-2.

5. Prepare a quantity of adhesive sufficient for cementing the detent plate, by thoroughly mixing in the ratio 100 parts, of Base Resin "B" and 140 parts Hardener Accelerator "A".

CAUTION: The mixing and application of cement shall be completed before the 2 hour pot life.

6. Using emery paper scuff up the back of detent plate prior to applying adhesive. Apply the adhesive, uniformly to the surfaces of the AOT and detent plate. Assemble the detent plate to the AOT (figure 1) and gently press them together to achieve an uninterrupted glue line. Remove excess adhesive with methyl alcohol.

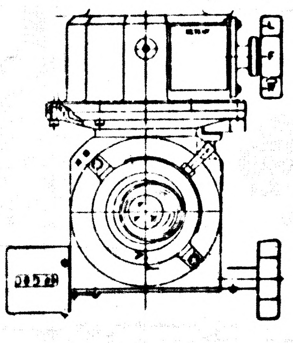

Figure 1. Detent Calibration Plate Location on AOT

7. Cure the bonded parts at room temperature for a minimum of 24 hours.

C. Identification Plate Marking

1. Prepare a quantity of ink sufficient for rubber stamping the configuration dash number listed in paragraph III. Thoroughly mix paint in the ratio of 8.5 grams ink, 1012545-001 and one (1) gram catalyst 1012546-001. Using rubber stamp, stamp the configuration dash number over the area where white ink was applied to nameplate. Allow to air dry one half hour minimum.

D. Sunshade Rework Procedure (RFK 8106076)

1. Using a screwdriver with allen head attachment remove the two (2) soc head cap screws securing the prism shield to the outer tube. Remove prism shield, 6011163 and prism shield spacer, 6011058, from AOT. Dispose of old prism shield, radar shield, soc head cap screws and spacer in accordance with paragraph IX.

2. Using a screwdriver with an allen head attachment remove the two (2). soc head cap screws marked with an "X" from the prism housing (See figure 2). Dispose of the two soc head cap screws in accordance with paragraph IX.

3. Obtain from retrofit kit sunshade and radar shield assembly, 6011876. Install sunshade over prism housing as shown in figure 3.

4. Obtain from retrofit kit two soc head cap screws, NAS 1352CO4LL8. Install soc head cap screws in sunshade as shown in figure 3. Do not torque screws at this operation.

5. Obtain from retrofit kit two clamps 6011248, two shims, 6011251, four washers, AN 960PD3L, and four screws NAS 1352CO2LL3.

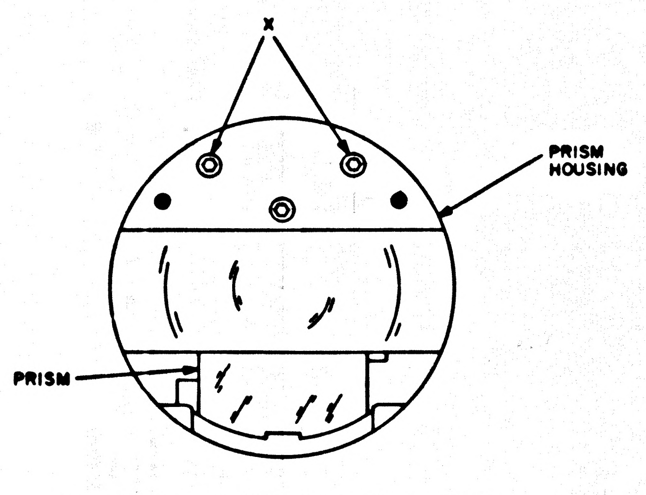

Figure 2. Location of Two Soc Head Cap Screws on Prism Housing (Top View)

NOTE: Shims, 6011251, shall only be used if clearances between clamps, 6011248, and bosses of sunshade, 6011876, exceed .010 inches on each side. (Use feeler gauge)

6. Install the two clamps, two shims if required to the sunshade using four screws NAS 1352CO2LL3 and four washers AN960PD3L as shown in figure 3. Do not torque screws at this operation.

7. Obtain from retrofit kit two screws NAS 1352CO2LL4. Install screws through sunshade holes as shown in figure 3. Do not torque screws at this operation.

8. Install sunshade alignment fixture over exposed end of sunshade. Secure fixture to sunshade using two retaining screws.

9. Prior to torquing all the mounting screws a visual observation shall be made through the AOT eyepiece as follows:
   a. Rotate AOT focus control for optimum focus on AOT reticle.
   b. Rotate the reticle control knob so AOT counter reads 0.00 degrees.
   c. Observe scribe line on sunshade alignment fixture. Rotate sunshade until scribe line is superimposed on center of AOT reticle.

10. When sunshade is centered torque the mounting screws in the following sequence:
    a. Torque two screws, NAS1352CO4LL8 shown in figure 3 to 4.8 + .20 - .10 inch-pounds

c. Torque four screws, NAS1352C02LL3 shown in figure 3 to 2.3 + .20 - .10 inch-pounds

11. Verify sunshade has remained centered on AOT reticle.
12. Remove AOT sunshade alignment fixture from sunshade.
13. Install sunshade protective cover, 6014324 on sunshade.
14. Visually inspect AOT for proper performance of retrofit.
15. Replace AOT Protective Dust Cover

E. Reidentification of Prime Parts to GSE Parts

1. Verify that radar shield, 6011165 has been removed from prism shield, 6011163.

~~2. Prepare a quanity of ink sufficient for painting over the part number on prism shield, 6011163, and prism shield spacer, 6011058 by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-001 (black) and one (1) gram catalyst, 1012546-001. Using a camel hair brush, paint over the part number on prism shield and prism shield spacer. Allow ink to air dry one half hour minimum. CAUTION: The ink and catalyst listed above shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tight closed container at room temperature. Pot life (catalyzed) 4 hours.~~

Page 11 of 15

~~3. Prepare a quantity of ink sufficient for rubber stamping the part number 6014328 on prism shield and 6014327 on prism shield spacer. Thoroughly mix ink in the ratio of 8.5 grams ink, 1012545-010 and one (1) gram catalyst 1012546-001. Using rubber stamp, stamp the new part number over the area where black ink was applied to prism shield and prism shield spacer. Allow to air dry one half hour minimum.~~

2. ~~4.~~ Bag and tag two soc. hd. cap screws, 6011083. ~~Reidentify bag to part number, 6014326.~~

3. ~~5.~~ Obtain from RFK 8106086 LEM-AOT Transparent Prism and Head Protective Cover, 6014035-011.

4. Assemble the GSE parts in steps 2,3, ~~PN 6011163~~ and PN 6011058 Bag and tag the parts as the AOT prism Protective Cover, PN6014329-011, per ND 1002019.

5. Visually inspect the GSE parts, for proper performance of retrofit and then place parts in NASA bond room.

Note: AOT Prism Protective Cover, PN6014329, shall be installed when shipping AOT and whenever sunshade is removed from AOT.

VIII MODIFICATION DESIGNATION

The retrofitted AOT's are reidentified with new part numbers in accordance with paragraph III. The modification designation is accomplished in paragraphs VII by marking Identification Plate, PN 1004260-350 with new configuration dash number.

IX. DISPOSITION OF PART REMOVED

1. Prism Shield, 6011163
   - removed in paragraph VII D.1
   - one per AOT
   - Part becomes GSE.
2. Prism Shield Spacer, 6011058
   - removed in paragraph VII D.1
   - one per AOT
   - Part becomes GSE.
3. Radar Shield, 6011165
   - removed in paragraph VII. D.1
   - one per AOT
   - see note 1
4. Soc. Hd. Cap Screw, 6011083
   - removed in paragraph VII d.1
   - two per AOT
   - part becomes GSE.

IV. PRIORITY CHANGES

None

V. RELATED CHANGES

None

VI. MATERIAL REQUIRED

A. One retrofit kit, PN 8106076

B. Special tools or equipment required but not supplied in the retrofit kit.

1. Freon TF, E.I. DuPont DeNemour Company or equivalent
2. Balance scale, ±1% accuracy for full range of scale
3. Mixing containers for paint-glass, aluminum, or corrosion-resisting steel
4. Mixing spatulas-glass, aluminum, or corrosion-resisting steel
5. Paint brush, camel hair
6. Rubber stamp, numbers .125 inches high approx.
7. Razor blade
8. Tool kit consisting of the following items as a minimum,
    a. Torque screw driver 0-5 inch pounds minimum
    b. Allen head set with attachments to screw driver
    c. Feeler gauge in tenths and hundredths
9. AOT Sunshade Alignment Fixture, 6014064
10. Emery paper, zero grade.
11. Lint free cloth
12. Methyl Alcohol
13. Dust Cover Protective, Sunshade, 6014324
14. Paint roller, hard surface

C. Drawings and documents required:

1. Drawing 6011000
2. Drawing 6011876
3. ND 1002019
4. ND 1002219

VII. PROCEDURE

A. General

1. Assemble and read all drawings and documents listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.
2. AC STD-1, General Workmanship, shall be applicable where such a requirement has not been placed by a drawing or ND.

B. Rework Procedure

1. Remove AOT Protective Dust Cover 6014322. Using freon, clean area of AOT nameplate in area of configuration dash number.
2. Prepare a quantity of paint sufficient for painting over the configuration dash number by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-010 and 1 (one) gram catalyst, 1012546-001. Using camel hair brush paint over configuration dash number. Allow ink to air dry one half hour minimum. Proceed with following steps while ink dries.

    CAUTION: The ink and catalyst listed above shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tightly closed container at room temperature. Pot life (catalyzed) 4 hours.

3. Obtain new detent calibration plate, 6011252, from retrofit kit. Verify that the AZ and ELEV. values for F, L, R are the exact values as on old detent calibration plate on AOT.
4. Using tape, lint-free cloth, plastic gloves, and Freon TF per paragraph VI.B, mask and wipe the area of AOT, to which detent calibration plate, PN 6011252, will be cemented, in accordance with ND 1002219.

CAUTION: It shall be determined that the shelf life of 6 months has not been exceeded before mixing the Base Resin "B" PN 1011541-1 and the Hardener Accelerator "A" PN 1011541-2.

5. Prepare a quantity of adhesive sufficient for cementing the detent plate, by thoroughly mixing in the ratio 100 parts, of Base Resin "B" and 140 parts Hardener Accelerator "A".

CAUTION: The mixing and application of cement shall be completed before the 2 hour pot life.

6. Using emery paper scuff up the back of detent plate prior to applying adhesive. Apply the adhesive, uniformly to the surfaces of the AOT and detent plate. Assemble the detent plate to the AOT (figure 1) and gently press them together to achieve an uninterrupted glue line. Remove excess adhesive with methyl alcohol.

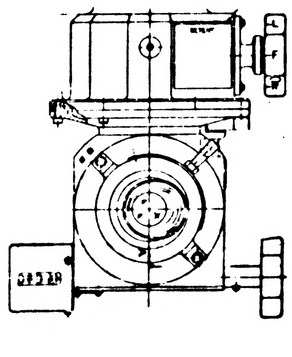

Figure 1. Detent Calibration Plate Location on AOT

---

7. Cure the bonded parts at room temperature for a minimum of 24 hours.

C. Identification Plate Marking

1. Prepare a quantity of ink sufficient for rubber stamping the configuration dash number listed in paragraph III. Thoroughly mix paint in the ratio of 8.5 grams ink, 1012545-001 and one (1) gram catalyst 1012546-001. Using rubber stamp, stamp the configuration dash number over the area where white ink was applied to nameplate. Allow to air dry one half hour minimum.

D. Sunshade Rework Procedure

1. Using a screwdriver with allen head attachment remove the two (2) soc head cap screws securing the prism shield to the outer tube. Remove prism shield, 6011163 and prism shield spacer, 6011058, from AOT. Dispose of old prism shield, radar shield, soc head cap screws and spacer in accordance with paragraph IX.

2. Using a screwdriver with an allen head attachment remove the two (2) soc head cap screws marked with an "X" from the prism housing (See figure 2). Dispose of the two soc head cap screws in accordance with paragraph IX.

3. Obtain from retrofit kit sunshade and radar shield assembly, 6011876. Install sunshade over prism housing as shown in figure 3.

4. Obtain from retrofit kit two soc head cap screws, NAS 1352C04LL8. Install soc head cap screws in sunshade as shown in figure 3. Do not torque screws at this operation.

5. Obtain from retrofit kit two clamps 6011246, two shims, 6011251, four washers, AN 960PD3L, and four screws NAS 1352C02LL3.

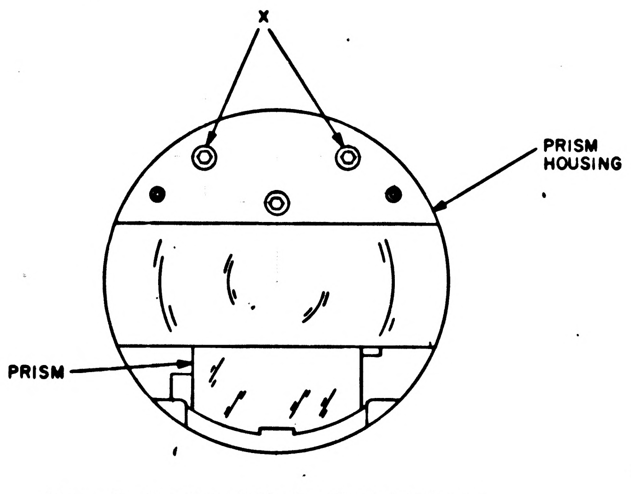

Figure 2. Location of Two Soc Head Cap Screws on Prism Housing (Top View)

NOTE: Shims, 6011251, shall only be used if clearances between clamps, 6011248, and bosses of sunshade, 6011876, exceed .010 inches on each side. (Use feeler gauge)

6. Install the two clamps, two shims if required to the sunshade using four screws NAS 1352C02LL3 and four washers AN960PD3L as shown in figure 3. Do not torque screws at this operation.

7. Obtain from retrofit kit two screws NAS 1352C02LL4. Install screws through sunshade holes as shown in figure 3. Do not torque screws at this operation.

8. Install sunshade alignment fixture over exposed end of sunshade. Secure fixture to sunshade using two retaining screws.

9. Prior to torquing all the mounting screws a visual observation shall be made through the AOT eyepiece as follows:
   a. Rotate AOT focus control for optimum focus on AOT reticle.
   b. Rotate the reticle control knob so AOT counter reads 0.00 degrees.
   c. Observe scribe line on sunshade alignment fixture. Rotate sunshade until scribe line is superimposed on center of AOT reticle.

10. When sunshade is centered torque the mounting screws in the following sequence:
   a. Torque two screws, NAS1352C04LL8 shown in figure 3 to 4.8 + .20 - .10 inch-pounds

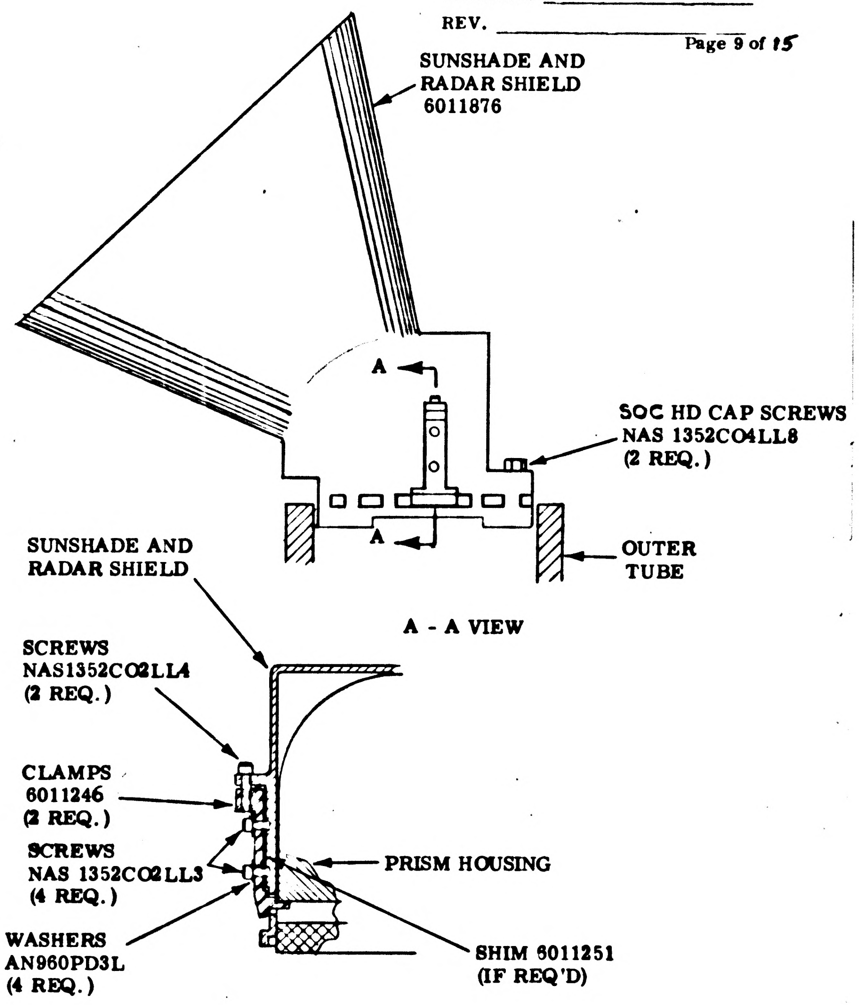

Figure 3. Installation of Sunshade on AOT

---

b. Torque two screws, NAS1352C02LL4 shown in figure 3 to 1.5 + .20 - .10 inch-pounds.

c. Torque four screws, NAS1352C02LL3 shown in figure 3 to 2.3 + .20 - .10 inch-pounds

11. Verify sunshade has remained centered on AOT reticle.
12. Remove AOT sunshade alignment fixture from sunshade.
13. Install sunshade protective cover, 6014324 on sunshade.
14. Visually inspect AOT for proper performance of retrofit.
15. Replace AOT Protective Dust Cover

E. Reidentification of Prime Parts to GSE Parts

1. Verify that radar shield, 6011165 has been removed from prism shield, 6011163.

~~2. Prepare a quanity of ink sufficient for painting over the part number on prism shield, 6011163, and prism shield spacer, 6011058 by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-001 (black) and one (1) gram catalyst, 1012546-001. Using a camel hair brush, paint over the part number on prism shield and prism shield spacer. Allow ink to air dry one half hour minimum. CAUTION: The ink and catalyst listed above shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tight closed container at room temperature. Pot life (catalyzed) 4 hours.~~

~~3. Prepare a quantity of ink sufficient for rubber stamping the part number 6014326 on prism shield and 6014327 on prism shield spacer. Thoroughly mix ink in the ratio of 8.5 grams ink, 1012545-010 and one (1) gram catalyst 1012546-001. Using rubber stamp, stamp the new part number over the area where black ink was applied to prism shield and prism shield spacer. Allow to air dry one half hour minimum.~~

2. Bag and tag two soc. hd. cap screws, 6011083. ~~Reidentify bag to part number, 6014326.~~

3. Obtain from NASA bond room LEM-AOT Transparent Prism and Head Protective Cover, 6014035-011.

4. Assemble the GSE parts in steps 2,3, PN 6011163 and PN 6011058 Bag and tag the parts as the AOT prism Protective Cover, PN6014329, per FED-STD-PPP-B-601.

5. Visually inspect the GSE parts, for proper performance of retrofit and then place parts in NASA bond room.

Note: AOT Prism Protective Cover, PN6014329, shall be installed when shipping AOT and whenever sunshade is removed from AOT.

VIII MODIFICATION DESIGNATION

The retrofitted AOT's are reidentified with new part numbers in accordance with paragraph III. The modification designation is accomplished in paragraphs VII by marking Identification Plate, PN 1004260-350 with new configuration dash number.

IX. DISPOSITION OF PART REMOVED

1. Prism Shield, 6011163
   - removed in paragraph VII D.1
   - one per AOT
   - Part becomes GSE.
2. Prism Shield Spacer, 6011058
   - removed in paragraph VII D.1
   - one per AOT
   - Part becomes GSE.
3. Radar Shield, 6011165
   - removed in paragraph VII. D.1
   - one per AOT
   - see note 1
4. Soc. Hd. Cap Screw, 6011083
   - removed in paragraph VII d.1
   - two per AOT
   - part becomes GSE.

RIB NO. 0106050
DATE
TDRR NO.
REV.

Page 13 of 15

5. Soc. Hd. Cap Screw, 1011625-30
   - removed in paragraph VII.
   - two per AOT
   - see note 1

NOTE 1: All parts removed and replaced shall be packaged in accordance with ND 1002214. Store packaged parts in a NASA approved bond room to await disposition as directed.

X. REPORT OF ACCOMPLISHMENT

VARIABLE DEVIATION WEDGE - 1017376-011
Serial Number 1 through 9

DATE	REV. LET.	TDRR NO.	PAGES REVISED	APPROVAL	
				MIT	NASA

PREPARED BY W. Lawrence DATE 12-18-68
I.C. ENG. APPROVAL DATE 1-20-69
DRB APPROVAL DATE 2/1/69
MIT/IL APPROVAL W. Stamerin DATE 4 Feb 69
NASA APPROVAL DATE 2/4/69

PART NUMBER
SERIAL NUMBER
RETROFIT KIT P/N 8106091 11
RETROFIT KIT S/N

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) contains instructions for modifying the Variable Deviation Wedge listed in paragraph III. The modification consists of applying a plus or minus correction sign to determine correction factor for direction of wedge deviation.

II. AUTHORITY

This retrofit is authorized by ECP 749 and CCA

III. UNITS AFFECTED

Name	Units	Pre-Retrofit PN	Post-Retrofit PN	Retrofit Kit PN
Variable Deviation Wedge	1-9	1017376-000	1017376-011	8106091

IV. PRIORITY CHANGES

None

V. RELATED CHANGES

None

VI. MATERIAL REQUIRED

A. One retrofit kit, 8106091.

B. Special tools or equipment required but not supplied in retrofit kit.

1. Epoxy adhesive, EC826 per MIL-A-5092, Type III
2. Epoxy ink, 1012545-001. (Black) 1012545-001
3. Catalyst 1012546-001.
4. Razor blade
5. Lint-free cloth
6. Balance scale, ±1% accuracy for full range of scale
7. Mixing containers for ink-glass, aluminum, or corrosion-resisting steel
8. Freon TF, E.I. DuPont De Nemour Company or equiv.
9. Surface plate, 5 x 4 feet nominal
10. Theodolite, DKM-3, 1017444 or equiv.
11. Front surface mirror, 3 inch diameter min. 1/2 wave or better
12. Camel hair brush
13. Masking tape.
14. Hard rubber roller

C. Drawings and documents required.

1. Drawing 1017376
2. MIL-A-5092
3. ND1002345

VII. PROCEDURE

A. General

1. Assemble and read all drawings and documents listed or referenced before initating retrofit. No deviation shall be made from the procedure outlined herein.

2. AC-STD-1, General Workmanship, shall be applicable where such a requirement has not been placed by a drawing or ND.

B. Rework Procedure

Test to Determine Correction Factor for Direction of Wedge Deviation.

1. Setup theodolite and front surface mirror on surface plate to obtain autocollimation.

2. Set variable deviation wedge micrometer to zero degrees. Place wedge between theodolite & front surface mirror so the wedge aperture is approximately centered about the collimated light beam.

3. Rotate the wedge slightly in azimuth until autocollimated image indicates minimum deviation.

4. Set wedge micrometer to 350 degrees. Adjust theodolite to superimpose image. Note direction of theodolite azimuth scale reading to point of superimposition.

B. Rework Procedure (Cont.)

5. If theodolite azimuth scale reading increases (wedge scale reading decreasing) the wedge reading for decreasing scale reading (from 360°) will indicate a negative (-) angle in seconds.
6. If theodolite azimuth scale reading decreases, (wedge scale reading increasing) the wedge reading for decreasing scale reading (from 360°) indicates a positive (+) angle in seconds.

NOTE: The wedge reading for increasing scale reading (from 360°) will have opposite angle indications from that in steps 5 and 6.

7. Record correction sign here, positive or negative.

Installation of Identification and Instruction Plate

8. If sign is negative (-), instruction plate, 1022677, from retrofit kit, already has a negative marked on it and no further marking is required and proceed to step 10. Step 10.

If sign is positive (+) proceed to step 9 to cross the negative sign on instruction plate to make it positive (+).

CAUTION

The ink and catalyst listed below shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tightly closed container at room temperature. Pot life (catalyzed) 4 hours.

---

9. Prepare a quantity of ink sufficient for crossing the negative (-) sign on instruction plate, by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-001 (black) and one (1) grain catalyst, 1012546-001. Using a camel hair brush, paint a line crossing the negative (-) sign. Allow the ink to air dry one half hour minimum.
10. Using masking tape, mask the perimeter of the identification plate and instruction plate. See Figure 1.
11. Using freon and lint free cloth, wipe the area of the identification plate and area where instruction plate is to be installed.
12. Obtain from retrofit kit identification plate, 1019175-001 and instruction plate, 1022677.
13. Apply epoxy adhesive, EC826, to both surfaces to be bonded. Allow to air dry three (3) to five (5) minutes or until tacky.
14. Orient both plates as shown in Figure 1 and using a hard roller, roll out all air and bumps to form a good bond between variable deviation wedge and plates.
15. Remove masking tape from around identification plate and instruction plate. Using lint free cloth or razor blade remove any excess adhesive.
16. Cure the bonded parts at room temperature for a minimum of four hours.

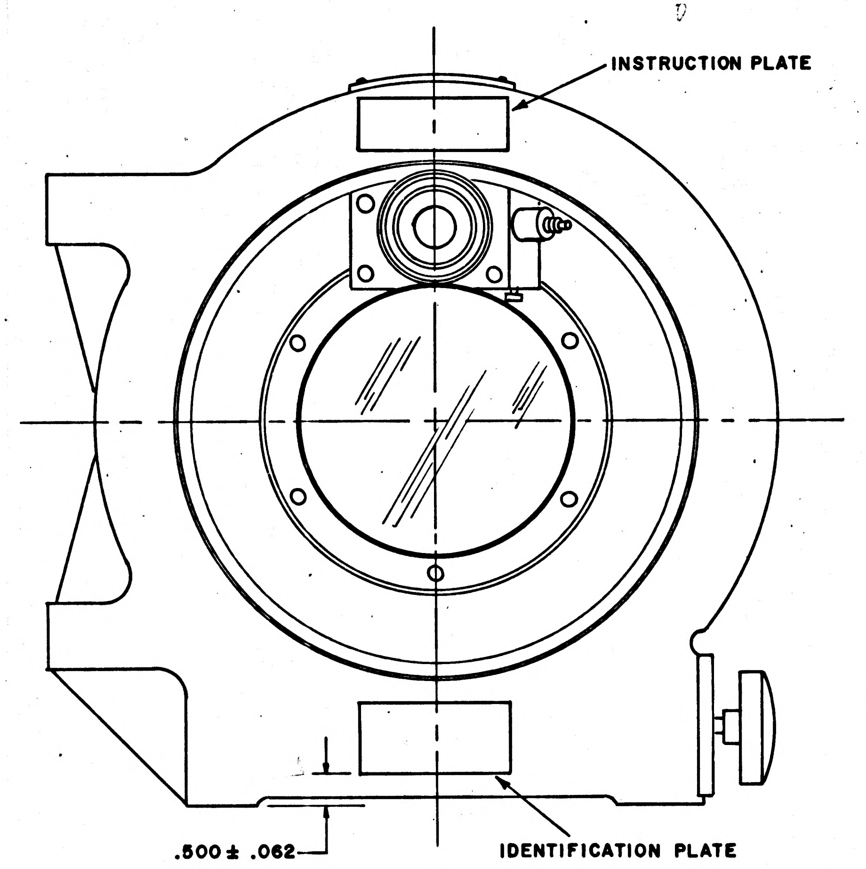

Figure 1

Figure 1. Instruction and Identification Plate Location on Variable Deviation Wedge

---

17. Visually inspect the variable deviation wedge for proper performance of retrofit.

VIII. MODIFICATION DESIGNATION

The retrofitted variable deviation wedge's are reidentified with new part numbers in accordance with paragraph III. The modification designation is accomplished in paragraph VII by cementing identification plate, PN 1019175-001 to each variable deviation wedge.

IX. DISPOSITION OF PARTS REMOVED

None

X. REPORT OF ACCOMPLISHMENT

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) contains instructions for modifying the SCT Standard (Adjustable) Eyepiece Assembly listed in paragraph III. The retrofit consists of adding a locking ring, 2012825, to the SCT eyepiece to reduce the possibility of SCT Eyeguard Assembly backing off during weightlessness.

II. AUTHORITY

This retrofit is authorized by ECP 795, CCA 497-0632

VII. PROCEDURE

A. General

1. Assemble and read all drawings and documents listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.

RIB NO. 0106058
DATE 5-26-69
TDRR NO.
REV.

2. AC-STD-1, General Workmanship, shall be applicable where such a requirement has not been replaced by a drawing or ND.

B. Rework Procedure

CAUTION

Care shall be exercised when cleaning with Freon TF to avoid spattering on the rubber eyeguard of the SCT Standard Eyepiece.

1. Remove the SCT Eyeguard Assembly P/N 2011965 from the SCT Standard Eyepiece Assembly.

CAUTION

Care shall be exercised when handling the SCT Eyeguard Assembly to prevent rubber eyeguard from becoming uncemented during ~~disassembly~~.

2. Prepare a swab(lens paper wrapped on shaped rod, both obtained from Optics Cleaner Kit P/N 1019984). Moistened in Freon TF.

3. Clean threads of SCT Standard Eyepiece Assembly with Freon TF.

4. Apply Dry Lubricant Powder (MIL-M-7866) to threads of SCT Eyepiece Assembly with a lint free cloth or chamois. Remove all loose particles.

5. Install locking ring P/N 2012825 (obtained from Retrofit Kit 8106094). Position it three quarters of the threaded distance from eye end of Eyepiece. (Ref. Figure 1).

6. Replace the SCT Eyeguard Assembly (P/N 2011965) on the SCT Eyepiece, until it shoulders against locking ring.

7. Hold SCT Eyeguard Assembly in one hand and bring installed Locking Ring (2012825) firmly against eyeguard assembly.

8. Using Freon TF, clean off area where P/N is marked.

9. Prepare a quantity of ink sufficient for painting over the configuration dash number by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-001 (black) and one (1) gram catalyst, 1012546-001. Using camel hair bruxh, paint over configuration dash number. Allow ink to air dry one half hour minimum.

CAUTION

The ink and catalyst listed above shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tightly closed container at room temperature. Pot life (catalyzed) 4 hours.

RIB NO. 0106058
DATE 5-26-69
TDRR NO.
REV.

10. 10. Prepare a quantity of ink sufficient for rubber stamping the configuration dash number listed in paragraph III. Thoroughly mix ink in the ratio of 8.5 grams ink, 1012545-010 (white) and one (1) gram catalyst 1012546-001. Using rubber stamp, stamp the configuration dash number over the area where black ink was applied. Allow to air dry one half hour minimum.

11. Visually inspect the SCT Standard (Adjustable) Eyepiece for proper performance of retrofit.

VIII MODIFICATION DESIGNATION

The retrofitted SCT Eyepieces are re0identified with new part numbers in accordance with paragraph III. The modification designation is accomplished in paragraph VII by marking the SCT Eyepiece with the new configuration dash number.

IX DISPOSITION OF PARTS REMOVED.

None. [illegible]

X REPORT OF ACCOMPLISHMENT

I. PURPOSE

This Retrofit Instruction Bulletin (RIB) contains instructions for modifying the Sextant Eyepiece Assembly listed in paragraph III. The retrofit consists of adding a locking ring, 2012826, to the SXT Eyepiece to reduce the possibility of SXT Eyeguard Assembly from backing off during weightlessness.

II. AUTHORITY

This retrofit ia authorized by ECP 795, CCA 497-0632.

III. UNITS AFFECTED

5. Rubber stamp, number 1/8 inch high approx.
6. Lint free cloth.
7. Lubricant, Dry Power per (MIL-M_7866)
8. Ink (1012545-001) black.
9. Catalyst (1012546-001)
10. Ink (1012545-010) white

C. Drawings and Documents Required

1. Drawing 8106095
2. Drawing 2012700-011
3. MIL-M-7866
4. ND 1002345
5. ND 1002019

VII. PROCEDURE

A. General

1. Assemble and read all drawings and documents listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.

RIB NO. 0106059
DATE 5-27-69
TDRR NO.
REV.

2. AC-STD-1, General Workmanship, shall be applicable where such a requirement has not been replaced by a drawing or N.D.

B. Rework Procedure

CAUTION

Care shall be exercised when cleaning with Freon TF to avoid spattering on the rubber eyeguard of the SXT Eyeguard Assembly.

1. Remove the SXT Eyeguard Assembly P/N 2012609-000 from the Sextant Eyepiece Assembly.

CAUTION

Care shall be exercised when handling the SXT Eyeguard Assembly to prevent rubber eyeguard from becoming uncemented during disassembly.

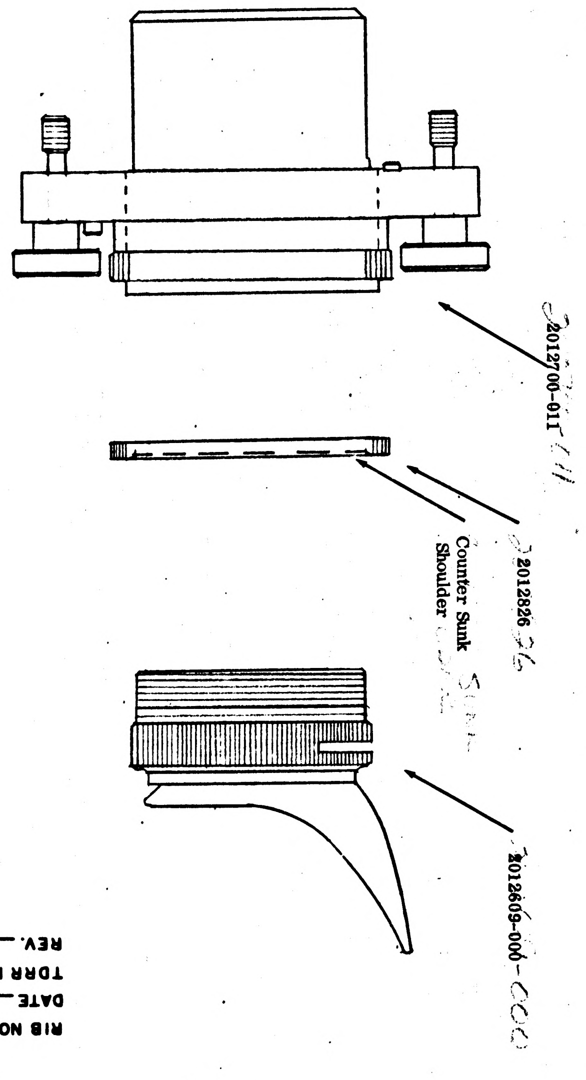
2. Prepare a swab (lens paper wrapped on shaped rod, both obtained from Optics Cleaner Kit P/N 1019984). Moistened in Freon TF.

3. Clean threads of SXT Eyeguard Assembly with Freon TF.

4. Apply Dry Lubricant Powder (MIL-M-7866) to threads of SXT Eyeguard Assembly with a lint free cloth or chamois. Remove all loose particles.

5. Install locking ring P/N 2012826 (obtained from Retrofit Kit 8106095). Position the ring with counter sunk shoulder towards eye end of SXT Eyeguard Assembly. (Ref. Fig. 1)

6. Run locking ring on threaded area of SXT Eyeguard Assembly until it mates with shoulder of 2012609 assembly.



Installation of SXT Locking Ring Fig 1

Figure 1. Installation of SXT Locking Ring

---

7. Replace the SXT Eyeguard Assembly (P/N 2012609-000) on the SXT Eyepiece, until locking ring shoulders against mating component of 2012700-011 assembly.

8. Hold SXT Eyeguard Assembly in one hand and bring installed Locking Ring (2012826) firmly against eyepiece assembly.

9. Using Freon TF, clean off area where P/N (2012700-011) is marked.

10. Prepare a quantity of ink sufficient for painting over the configuration dash number by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-001 (black) and one (1) gram catalyst, 1012546-001. Using camel hair brush, paint over configuration dash number. Allow ink to air dry one half hour minimum.

CAUTION

The ink and catalyst listed above shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tightly closed container at room temperature. Pot life (catalyzed) 4 hours.

11. Prepare a quantity of ink sufficient for rubber stamping the configuration dash number listed in paragraph III. Thoroughly mix ink in the ratio of 8.5 grams ink, 1012545-010 (white) and one (1) gram catalyst 1012546-001. Using rubber stamp, stamp the configuration dash number over the area where black ink was applied. Allow to air dry one half hour minimum.

12. Visually inspect the Sextant Eyepiece for proper performance of retrofit.

VIII. MODIFICATION DESIGNATION

The retrofitted SXT Eyepieces are reidentified with new part numbers in accordance with paragraph III. The modification designation is accomplished in paragraph VII by marking the SXT Eyepiece with the new configuration dash number.

IX. DISPOSITION OF PARTS REMOVED

None.

X. REPORT OF ACCOMPLISHMENT

Complete ACC form 1 (Revised) Retrofit or Repair Compliance Report, dated 10/10/66, in accordance with ND 1002345.

I PURPOSE

This Retrofit Instruction Bulletin (RIB) contains instructions for modifying the SXT Mirror Housing Assembly listed in paragraph III. The retrofit consists of adding a field stop, 2012830 to the SXT Mirror Housing. The function of this field stop is to eliminate the halo formed around the SXT reticle.

II AUTHORITY

This retrofit is authorized by NAS 9-10356 (ECP ACSK-1007)

III UNITS AFFECTED

1. Drawing 8106096
2. Drawing 2012791
3. ND1002019
4. ND1002219

VII PROCEDURE

A. General

1. Assemble and read all drawings and documents listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.
2. AC-STD-1, General Workmanship, shall be applicable where such a requirement has not been placed by a drawing or ND.

B. Rework Procedure

Caution: Care shall be exercised when cleaning with Freon TF or MEK to avoid spattering on the optics inside the SXT Mirror Housing. Care shall be exercised during the application and curing of the adhesive to prevent the adhesive from bleeding or flowing.

1. Prior to bonding the field stop to the SXT mirror housing. Clean the inside surfaces of the mirror housing with Freon TF or MEK using swab (lens paper wrapped on shaped rod) obtained from Optics Cleaner Kit. Remove all traces of oil, grease, dirt or other contamination which might adversely effect adhesion in the area to be bonded.
2. Clean the field stop, 2012830, obtained from the retrofit with Freon TF or MEK.

   Caution: The shelf life of six (6) months shall be observed before mixing the Base Resin "B", P/N 1011541-1, and the Hardner Accelerator "A" P/N 1011541-2.

3. Prepare a quantity of adhesive sufficient for cementing the field stop, by thoroughly mixing in the ratio, 100 parts of Base Resin "B" and 140 parts Hardner Accelerator "A".

RIB NO. 0106060
DATE 6-29-70
TDRR NO. 38175
REV. A

Caution: Pot life of two hours for the adhesive shall be observed during the cementing operation.

4. Apply a thin film of adhesive to the inside of the mirror housing as shown in figure 1.
5. Mount field stop, 2012830 on Field Stop Holding Fixture by turning clamps on holding fixture towards center of fixture. (Directional arrows on thumb screws facing towards center of fixture)*. Once field stop is in place, turn clamps outward 180 degrees (directional arrows pointing out). Tighten lower thumb nuts to secure field stop.

   *Refer to Figure 1 for chamfer orientation of field stop on fixture.

6. Assemble fixture into SXT mirror housing as shown in figure 2. Fasten fixture to SXT mirror housing with two (2) hex head cap screws. Check axial location of field stop with depth gage 1.276 ±.020 inch, as shown in Figure 1.
7. Apply a bead of adhesive as required on the outer perimeter of the field stop and wall of the SXT mirror housing (refer to figure 1) if the area can be reached with the fixture in place.
8. Cure the SXT mirror housing for 24 hours minimum at room temperature (25° ± 5°C). (Fixture mounting flange facing downward)
9. After adhesive has cured. Remove fixture by loosening lower thumb nuts and turning upper thumb screws half turn (180°) so that directional is facing toward center of fixture. When clamps are in this position, tighten lower thumb nuts. Remove two (2) hex head cap screws holding fixture down and gently remove fixture.
10. After fixture has been removed, add additional adhesive to outer perimeter of field stop to areas that did not receive adhesive while fixture was in place.

    Caution: Do not apply adhesive to area noted in figure 1. (.500 ± .062 inch dimension shown on end view of mirror housing)

C. Identification Marking

1. Using Freon TF or MEK clean off the area where P/N is marked.
2. Prepare a quantity of ink sufficient for painting over the configuration dash number by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-001(black) and one (1) gram catalyst, 1012546-001. Using camel hair brush, paint over configuration dash number. Allow ink to air dry for one half hour minimum.

   Caution: The ink and catalyst listed above shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tightly closed container at room temperature. Pot life (catalyzed) 4 hours.
3. Prepare a quantity of ink sufficient for rubber stamping the configuration dash number listed in paragraph III. Thoroughly mix ink in the ratio of 8.5 grams ink, 1012545-010 (white) and one (1) gram catalyst, 1012546-001. Using rubber stamp, stamp the configuration dash number over the area where black ink was applied. Allow to air dry one half hour minumum.
4. Visually inspect the SXT mirror housing for proper performance of retrofit. Install SXT Standard Eyepiece, 2012700, and check for no interference. A thin film of adhesive may bleed beyond the adhesive bead at the field stop, however, this is acceptable if it does not interfere with the proper performance of the eyepiece.

VIII MODIFICATION DESIGNATION

The retrofitted SXT mirror housings are re-identified with part numbers in accordance with paragraph III. The modification designation is accomplished in paragraph VII by marking the SXT mirror housing with the new configuration dash number.

VII PROCEDURE

A. General
1. Assemble and read all drawings and documents listed or referenced before initiating retrofit. No deviation shall be made from the procedure outlined herein.
2. AC-STD-1, General Workmanship, shall be applicable where such a requirement has not been placed by a drawing or ND.

B. Rework Procedure

Caution: Care shall be exercised when cleaning with FREON TF OR MEK ~~acetone~~ to avoid spattering on the optics inside the SXT Mirror Housing.

1. Prior to bonding the field stop to the SXT mirror housing. Clean the inside surfaces of the mirror housing with FREON TF OR MEK ~~acetone~~ using swab (lens paper wrapped on shaped rod) obtained from Optics Cleaner Kit. Remove all traces of oil, grease, dirt or other contamination which might adversely effect adhesion in the area to be bonded.
2. Clean the field stop, 2012830, obtained from the retrofit with ~~acetone~~ FREON TF OR MEK.

Caution: The shelf life of six (6) months shall be observed before mixing the Base Resin "B", P/N 1011541-1, and the Hardner Accelerator "A" P/N 1011541-2.

3. Prepare a quantity of adhesive sufficient for cementing the field stop, by thoroughly mixing in the ratio, 100 parts of Base Resin "B" and 140 parts Hardner Accelerator "A".

Caution: Pot life of two hours for the adhesive shall be observed during the cementing operation.

4. Apply a thin film of adhesive to the inside of the mirror housing as shown in figure 1.
5. Mount field stop, 2012830 on Field Stop Holding Fixture ~~[illegible]~~, by turning clamps on holding fixture towards center of fixture. (Directional arrows on thumb screws facing towards center of fixture)* Once field stop is in place, turn clamps outward 180 degrees (Directional arrows pointing out). Tighten lower thumb nuts to secure field stop.

   *Refer to Figure 1 for chamfer orientation of field stop on fixture.

6. Assemble fixture into SXT mirror housing as shown in figure 2. Fasten fixture to SXT mirror housing with two (2) hex head cap screws. Check axial location of field stop with depth gage 1.276 ±.~~010~~ .020 inch, as shown in Figure 1.
7. Apply a bead of adhesive on the outer perimeter of the field stop and wall of the SXT mirror housing (Refer to figure 1) to area which can be reached with fixture in place.
8. Cure the SXT mirror housing for 24 hours minimum at room temperature (25° ± 5°C). (Fixture mounting flange facing downward)
9. After adhesive has cured. Remove fixture by loosening lower thumb nuts and turning upper thumb screws half turn (180°) so that directional is facing toward center of fixture. When clamps are in this position, tighten lower thumb nuts. Remove two (2) hex head cap screws holding fixture down and gently remove fixture.
10. After fixture has been removed, add additional adhesive to outer perimeter of field stop to areas that did not receive adhesive while fixture was in place.

Caution: Do not apply adhesive to area noted in figure 1. (.500 ± .002 inch dimension shown on end view of mirror housing)

C. Identification Marking

1. Using ~~acetone~~ FREON TF OR MEK clean off the area where P/N is marked.
2. Prepare a quantity of ink sufficient for painting over the configuration dash number by thoroughly mixing in the ratio of 8.5 grams ink, 1012545-001 (black) and one (1) gram catalyst, 1012546-001. Using camel hair brush, paint over configuration dash number. Allow ink to air dry for one half hour minimum.

   Caution: The ink and catalyst listed above shall have a shelf life of 12 months maximum for ink or 6 months maximum for catalyst when stored in a clean tightly closed container at room temperature. Pot life (catalyzed) 4 hours.
3. Prepare a quantity of ink sufficient for rubber stamping the configuration dash number listed in paragraph III. Thoroughly mix ink in the ratio of 8.5 grams ink, 1012545-010 (white) and one (1) gram catalyst, 1012546-001. Using rubber stamp, stamp the configuration dash number over the area where black ink was applied. Allow to air dry one half hour minumum.
4. Visually inspect the SXT mirror housing for proper performance of retrofit. Install SXT Standard Eyepiece, 2012700, and check for no interference.

VIII MODIFICATION DESIGNATION

The retrofitted SXT mirror housings are re-identified with part numbers in accordance with paragraph III. The modification designation is accomplished in paragraph VII by marking the SXT mirror housing with the new configuration dash number.

IX DISPOSITION OF PARTS REMOVED

None

X REPORT OF ACCOMPLISHMENT

Complete ACC form 1 (Revised) Retrofit or Repair Compliance Report, dated 10/10/66, in accordance with ND 1002345.

RETROFIT OR REPAIR COMPLIANCE REPORT

Reporting Facility: ________ Date: ________ G & N # ________

The following information must be submitted to Apollo Integrated Logistics Support, Dept. 38-05, AC Electronics, Milwaukee, upon the completion of any retrofit performed on Apollo GFP equipment or repair of Apollo Airborne GFP.

In Part I below, list all Apollo airborne GFP components that are repaired and all A/B and GSE MD symbols or P/N changes affecting subassembly and higher levels of equipment. List highest-to-lowest level of assembly order. All parts/assemblies added to or removed from airborne equipment shall be listed in Part II using the Part I Indent No. of the assembly affected as a cross reference.

PART I: A/B GSE BLACK BOXES/REPARABLE SUB-ASSEMBLIES AFFECTED

In-dent	Equipment Name	Equip. P/N Prior to Repair/Retro	Equip. S/N	Retrofit Installed			Equip. P/N or MD Sym. After Retro	Additional Information
				ECP No.	Kit P/N	Kit S/N		
1	SXT Mirror

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. ASSEMBLE AND TEST PER REQUIREMENTS OF ATP 1000001
3. SCREW TORQUE REQUIREMENTS ± 7 %
   - A. 5.0 IN. LB
   - B. 3.5 IN. LB
   - C. 2.0 IN. LB AT FINAL SEATING, NOT TO EXCEED 1.0 IN LB WHILE ENGAGING PINS
   - D. INSTALL FINGER TIGHT
4. MARK CHARACTERS $\frac{.10}{.14}$ HIGH COLOR BLACK PER NO. 1002019 AT LOCATION SHOWN
5. RESISTORS TO BE SELECTED FROM SELECTION CHART PER ATP 1000001
6. SOLDER PER MIL-STD-440 USING (16) : WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS

Ⓡ ~~7. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER IN. MIN.~~

8. MARK THE PIP CONNECTORS WITH THE FOLLOWING DESIGNATIONS AS SHOWN,
   A1 - P18 A2 - P19 A3 - P20
9. USE DRAWING NO. 1000017 WIRING DIAGRAM FOR REFERENCE

Ⓨ Ⓥ 10. APPLY A THIN FILM OF SILICONE COMPOUND, ITEM (47), TO CONTACT SURFACE BETWEEN STABLE MEMBER, ITEM (1) AND ITEMS (2), (4), (5), (11), (13) & (17) AND BETWEEN ITEM (3) AND ITEM (4) AND BETWEEN ITEM (2) AND ITEM (3)

Ⓨ 11. INERTIAL COMPONENTS, GYRO PRE-ALIGNED ASSY. NASA DWG. NO. 1000012 AND PIP PREALIGNED ASSY NASA DWG NO. 1000013, TO BE ASSEMBLED TO STABLE MEMBER. CALIBRATION MODULES, GYRO CALIB. ASSY. & PIP CALIB. ASSY AS SPECIFIED ON NASA DWGS. 1001599 AND 1001598. TO BE MAINTAINED IN CONJUCTION WITH THIS ASSY.

12. TAPE (66) SHALL BE USED AS REQUIRED TO RESTRICT MOVEMENT OF THE HARNESS IN THE CABLE CLAMPS.

Ⓡ TWISTING TO CONSIST OF THE FOLLOWING NUMBER OF TURNS PER INCH

NO. OF LEADS	NO. OF FULL TURNS MIN	NO. OF FULL TURNS MAX

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. ASSEMBLE AND TEST PER REQUIREMENTS OF ATP 1000001
3. SCREW TORQUE REQUIREMENTS ± 7 %
   - A. 5.0 IN. LB
   - B. 3.5 IN. LB
   - C. 1.0 IN. LB AT FINAL SEATING, NOT TO EXCEED 1.0 IN LB WHILE ENGAGING PINS
   - D. INSTALL FINGER TIGHT
4. MARK CHARACTERS $\frac{.10}{.14}$ HIGH COLOR BLACK PER NO. 1002019 AT LOCATION SHOWN
5. RESISTORS TO BE SELECTED FROM SELECTION CHART PER ATP 1000001
6. SOLDER PER MIL-STD-440 USING .16 : WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS

Ⓡ ~~7. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER IN. MIN.~~

8. MARK THE PIP CONNECTORS WITH THE FOLLOWING DESIGNATIONS AS SHOWN, A1 - P18 A2 - P19 A3 - P20
9. USE DRAWING NO. 1000017 WIRING DIAGRAM FOR REFERENCE

Ⓨ Ⓥ 10. APPLY A THIN FILM OF SILICONE COMPOUND, ITEM (47), TO CONTACT SURFACE BETWEEN STABLE MEMBER, ITEM (1) AND ITEMS (2), (4), (5), (11), (13) & (17) AND BETWEEN ITEM (3) AND ITEM (4) AND BETWEEN ITEM (2) AND ITEM (3)

Ⓨ 11. INERTIAL COMPONENTS, GYRO PRE-ALIGNED ASSY. NASA DWG. NO. 1000012 AND PIP PREALIGNED ASSY NASA DWG NO. 1000013, TO BE ASSEMBLED TO STABLE MEMBER. CALIBRATION MODULES, GYRO CALIB. ASSY. & PIP CALIB. ASSY AS SPECIFIED ON NASA DWGS 1001599 AND 1001598. TO BE MAINTAINED IN CONJUCTION WITH THIS ASSY.

12. TAPE (66) SHALL BE USED AS REQUIRED TO RESTRICT MOVEMENT OF THE HARNESS IN THE CABLE CLAMPS.

Ⓡ TWISTING TO CONSIST OF THE FOLLOWING NUMBER OF TURNS PER INCH

NO. OF LEADS	NO. OF FULL TURNS MIN	NO. OF FULL TURNS MAX

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. ASSEMBLE AND TEST PER REQUIREMENTS OF ATP 1000001
3. SCREW TORQUE REQUIREMENTS ± 7 %
   - A. 5.0 IN.LB
   - B. 3.5 IN.LB
   - C 1.0 IN.LB AT FINAL SEATING, NOT TO EXCEED 1.0 IN LB WHILE ENGAGING PINS
   - D. INSTALL FINGER TIGHT
4. MARK CHARACTERS .10/.14 HIGH COLOR BLACK PER NO. 1002019 AT LOCATION SHOWN
5. RESISTORS TO BE SELECTED FROM SELECTION CHART PER ATP 1000001
6. SOLDER PER MIL-STD-440 USING (16) : WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS

Ⓡ ~~7. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER IN. MIN.~~

8. MARK THE PIP CONNECTORS WITH THE FOLLOWING DESIGNATIONS AS SHOWN,
   A1 - P18 A2 - P19 A3 - P20
9. USE DRAWING NO. 1000017 WIRING DIAGRAM FOR REFERENCE

Ⓨ Ⓥ 10. APPLY A THIN FILM OF SILICONE COMPOUND, ITEM (47), TO CONTACT SURFACE BETWEEN STABLE MEMBER, ITEM (1) AND ITEMS (2), (4), (5), (11), (13), (17), (56), (57), (58), (67) THRU (71) AS APPLICABLE; AND BETWEEN ITEM (3) AND ITEM (4); AND BETWEEN ITEMS (2), (5), (56), (57), (58), (67) THRU (71) AND ITEM (3).

Ⓨ 11. INERTIAL COMPONENTS, GYRO PRE-ALIGNED ASSY. NASA DWG. NO. 1000012 AND PIP PREALIGNED ASSY NASA DWG NO. 1000013, TO BE ASSEMBLED TO STABLE MEMBER. CALIBRATION MODULES, GYRO CALIB. ASSY. & PIP CALIB. ASSY AS SPECIFIED ON NASA DWGS 1001599 AND 1001598. TO BE MAINTAINED IN CONJUCTION WITH THIS ASSY.

12. TAPE (66) SHALL BE USED AS REQUIRED TO RESTRICT MOVEMENT OF THE HARNESS IN THE CABLE CLAMPS.

TWISTING TO CONSIST OF THE FOLLOWING NUMBER OF TURNS PER INCH

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL D-70327
2. ASSEMBLE AND TEST PER REQUIREMENTS OF ATP 1000001
3. SCREW TORQUE REQUIREMENTS ± 7 %
   - A. 5.0 IN LB
   - B. 3.5 IN. LB
   - C. 1.0 IN. LB AT FINAL SEATING, NOT TO EXCEED 1.0 IN LB WHILE ENGAGING PINS
   - D. INSTALL FINGER TIGHT
4. MARK CHARACTERS $\frac{.0}{.14}$ HIGH COLOR BLACK PER NO. 1002019 AT LOCATION SHOWN
5. RESISTORS TO BE SELECTED FROM SELECTION CHART PER ATP 1000001
6. SOLDER PER MIL STD-440 USING 16 ; WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS

(R) ~~7. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER IN. MIN.~~

8. MARK THE PIP CONNECTORS WITH THE FOLLOWING DESIGNATIONS AS SHOWN,
   A1 - P18 A2 - P19 A3 - P20
9. USE DRAWING NO. 1000017 WIRING DIAGRAM FOR REFERENCE

(Y) (V) 10. APPLY A THIN FILM OF SILICONE COMPOUND, ITEM (47), TO CONTACT SURFACE BETWEEN STABLE MEMBER, ITEM (1) AND ITEMS (2), (4), (5), (11), (13), (17), (56), (57), (58), (67) THRU (71) AS APPLICABLE; AND BETWEEN ITEM (3) AND ITEM (4) ; AND BETWEEN ITEMS (2), (5), (56), (57), (58), (67) THRU (71) AND ITEM (3).

(Y) 11. INERTIAL COMPONENTS, GYRO PRE-ALIGNED ASSY. NASA DWG. NO. 1000012 AND PIP PREALIGNED ASSY NASA DWG NO. 1000013, TO BE ASSEMBLED TO STABLE MEMBER. CALIBRATION MODULES, GYRO CALIB. ASSY. & PIP CALIB. ASSY AS SPECIFIED ON NASA DWGS. 1001599 AND 1001598. TO BE MAINTAINED IN CONJUCTION WITH THIS ASSY.

12. TAPE (66) SHALL BE USED AS REQUIRED TO RESTRICT MOVEMENT OF THE HARNESS IN THE CABLE CLAMPS.

TWISTING TO CONSIST OF THE FOLLOWING NUMBER OF TURNS PER INCH

5. RESISTORS TO BE SELECTED FROM SELECTION CHART PER ATP 1000001.
6. SOLDER PER MIL-STD-440 USING ⑯ : WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.

8. MARK THE PIP CONNECTORS WITH THE FOLLOWING DESIGNATIONS AS SHOWN, A1-P18 A2-P19 A3-P20
9. USE DRAWING NO. 1000017 WIRING DIAGRAM FOR REFERENCE.
10. APPLY A THIN FILM OF SILICONE COMPOUND, ITEM ㊼, TO CONTACT SURFACE BETWEEN STABLE MEMBER, ITEM ① AND ITEMS ②, ④, ⑤, ⑪, ⑬, ⑰, (56), (57), (58), (69), (70), (71) AS APPLICABLE; AND BETWEEN ITEM ③, AND ITEM ④; AND BETWEEN ITEMS ②, ⑤, (56), (57), (58), (69), (70), (71) AND ITEM ③.
11. INERTIAL COMPONENTS, GYRO PRE-ALIGNED ASSY NASA DWG NO. 1000012 AND PIP PRE-ALIGNED ASSY NASA DWG NO. 1000013, TO BE ASSEMBLED TO STABLE MEMBER. CALIBRATION MODULES, GYRO CALIB. ASSY AND PIP CALIB. ASSY AS SPECIFIED ON NASA DWGS 1001599 AND 1001598, TO BE MAINTAINED IN CONJUNCTION WITH THIS ASSY.
12. TAPE (66) SHALL BE USED AS REQUIRED TO RESTRICT MOVEMENT OF THE HARNESS IN THE CABLE CLAMPS.

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. ASSEMBLE AND TEST PER REQUIREMENTS OF ATP 1000001
3. SCREW TORQUE REQUIREMENTS ± 7 %
   - A. 5.0 IN. LB
   - B. 3.5 IN. LB
   - C. 2.0 IN. LB AT FINAL SEATING, NOT TO EXCEED 1.0 IN LB WHILE ENGAGING PINS
   - D. INSTALL FINGER TIGHT
4. MARK CHARACTERS $\frac{.10}{.14}$ HIGH COLOR BLACK PER NO. 1002019 AT LOCATION SHOWN
5. RESISTORS TO BE SELECTED FROM SELECTION CHART PER ATP 1000001
6. SOLDER PER MIL-STD-440 USING (16) : WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS

Ⓡ ~~7. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER IN. MIN.~~

8. MARK THE PIP CONNECTORS WITH THE FOLLOWING DESIGNATIONS AS SHOWN,
   A1 - P18 A2 - P19 A3 - P20
9. USE DRAWING NO. 1000017 WIRING DIAGRAM FOR REFERENCE

Ⓨ Ⓥ 10. APPLY A THIN FILM OF SILICONE COMPOUND, ITEM (47), TO CONTACT SURFACE BETWEEN STABLE MEMBER, ITEM (1) AND ITEMS (2), (4), (5), (11), (13) & (17) AND BETWEEN ITEM (3) AND ITEM (4) AND BETWEEN ITEM (2) AND ITEM (3)

Ⓨ 11. INERTIAL COMPONENTS, GYRO PRE-ALIGNED ASSY. NASA DWG. NO. 1000012 AND PIP PREALIGNED ASSY NASA DWG. NO. 1000013, TO BE ASSEMBLED TO STABLE MEMBER. CALIBRATION MODULES, GYRO CALIB. ASSY. NASA DWG 1007021 & PIP CALIB. ASSY. NASA DWG NO. 1007009 TO BE MAINTAINED IN CONJUNCTION WITH THIS ASSY.

NOTES:

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS $\frac{.10}{.14}$ HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN
3. ECCENTRICITY MARKS ON BOTH RACES OF ⑧ TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW WHEN ① AND ② ARE IN THE POSITION SHOWN. APPLY THIN COAT OF (37) TO INSIDE DIAMETER OF ⑧ AND TO FAYING SURFACE OF ② BEFORE ASSEMBLY
4. APPLY (36) TO ② & ⑦ AFTER ASSEMBLY
5. IDENTIFY USING DRAWING NO., REVISION LETTER, MANUFACTURERS SYMBOL & SERIAL NO. ON ① & MATCHING SERIAL NO. ON ② AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ± 7%

⑦	100 IN. LB.
㉓	10.0 IN. LB.
② ㉒ ㉗ ㉘ ㉚	5.0 IN. LB.
⑱ ㉕ ㉖	3.5 IN. LB

7. SOLDER ALL LEADS FROM ③ & ④ TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING ㉞. SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR ⑪, ⑫ & ⑬ PER MIL-STD-440 USING ㉟. WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MIN.
9. CAUTION: DO NOT SEPARATE STUB SHAFT ② FROM HOUSING BEARING ① OR REMOVE TORQUE MOTOR ④ WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR ④.
10. MAXIMUM ALLOWABLE TORQUE 15 OZ.-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1000006.
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.

NOTES:

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS $^{.10}_{.14}$ HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN
3. ECCENTRICITY MARKS ON BOTH RACES OF ⑧ TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW WHEN ① AND ② ARE IN THE POSITION SHOWN. APPLY THIN COAT OF ㊲ TO INSIDE DIAMETER OF ⑧ AND TO FAYING SURFACE OF ② BEFORE ASSEMBLY
4. APPLY ㊱ TO ② & ⑦ AFTER ASSEMBLY
5. IDENTIFY USING DRAWING NO., REVISION LETTER, MANUFACTURERS SYMBOL & SERIAL NO. ON ① & MATCHING SERIAL NO. ON ② AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ± 7%

⑦	180 IN. LB.
㉓	10.0 IN. LB.
㉑ ㉒ ㉗ ㉘ ㉚	5.0 IN. LB.
⑱ ㉕ ㉖	3.5 IN. LB

7. SOLDER ALL LEADS FROM ③ & ④ TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING ㉞. SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR ⑪, ⑫ & ⑬ PER MIL-STD-440 USING ㉟. WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
Ⓚ 8. HEAT SHRINK SLEEVING ON ITEMS ㊼ & ㊽ AFTER ASSEMBLY
9. CAUTION: DO NOT SEPARATE STUB SHAFT ② FROM HOUSING BEARING ① OR REMOVE TORQUE MOTOR ④ WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR ④.
10. MAXIMUM ALLOWABLE TORQUE 15 OZ.-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1000006.
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
Ⓖ 13. PROTECTIVE CAP, NASA DWG NO 1001495, TO BE REMOVED ONLY AS NECESSARY FOR TEST & INSPECTION.

NOTES:

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS $\frac{.10}{.14}$ HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN
3. ECCENTRICITY MARKS ON BOTH RACES OF (8) TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW WHEN (1) AND (2) ARE IN THE POSITION SHOWN. APPLY THIN COAT OF 37) TO INSIDE DIAMETER OF 8 AND TO FAYING SURFACE OF (2) BEFORE ASSEMBLY.
4. APPLY 36 TO (2 & 7 AFTER ASSEMBLY.
5. IDENTIFY USING DRAWING NO., REVISION LETTER, MANUFACTURERS SYMBOL & SERIAL NO ON (1) & MATCHING SERIAL NO ON (2) AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ± 7%

(7)	100 IN. LB.
(23)	10.0 IN. LB.
(21) 22 (27) (28) (30)	5.0 IN. LB.
18 25 (26)	3.5 IN. LB

7. SOLDER ALL LEADS FROM 3 & (4) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (34). SOLDER ALL OTHER LEADS T EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR 11, 12 & 13 PER MIL-STD-440 USING (35). WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. Ⓚ HEAT SHRINK SLEEVING ON ITEMS (47) & (48) AFTER ASSEMBLY
9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM HOUSING BEARING (1) OR REMOVE TORQUE MOTOR (4) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (4).
10. MAXIMUM ALLOWABLE TORQUE 15 OZ-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1000006.
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
13. Ⓖ PROTECTIVE CAP, NASA DWG NO 1001495, TO BE REMOVED ONLY AS NECESSARY FOR TEST & INSPECTION

NOTES:

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS .10/.14 HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN
3. ECCENTRICITY MARKS ON BOTH RACES OF (8) TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW WHEN (1) AND (2) ARE IN THE POSITION SHOWN. APPLY THIN COAT OF (37) TO INSIDE DIAMETER OF (8) AND TO FAYING SURFACE OF (2) BEFORE ASSEMBLY.
4. APPLY 36 TO (2) & (7) AFTER ASSEMBLY.
5. IDENTIFY USING DRAWING NO., REVISION LETTER, MANUFACTURERS SYMBOL & SERIAL NO ON (1) & MATCHING SERIAL NO ON (2) AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ± 7%

(7)	100 IN. LB.
(23)	10.0 IN. LB.
(21) (22) (27) (28) (30)	5.0 IN. LB.
(18) (25) (26)	3.5 IN. LB

7. SOLDER ALL LEADS FROM (3) & (4) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (34). SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR (11), (12) & (13) PER MIL-STD-440 USING (35). WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
(K) 8. HEAT SHRINK SLEEVING ON ITEMS (47) & (48) AFTER ASSEMBLY
9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM HOUSING BEARING (1) OR REMOVE TORQUE MOTOR (4) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (4).
10. MAXIMUM ALLOWABLE TORQUE IS OZ-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1000006.
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
(G) 13. PROTECTIVE CAP, NASA DWG NO 1001495, TO BE REMOVED ONLY AS NECESSARY FOR TEST & INSPECTION.

(M) (K) TWISTING TO CONSIST OF THE FOLLOWING TURNS PER INCH

NO. OF LEADS	NO. OF FULL TURNS MIN	NO. OF FULL TURNS MAX
2 OR 3	2	4

NOTES:

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS $\frac{.10}{.14}$ HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN
3. ECCENTRICITY MARKS ON BOTH RACES OF (8) TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW WHEN (1) AND (2) ARE IN THE POSITION SHOWN. APPLY THIN COAT OF (37) TO INSIDE DIAMETER OF (8) AND TO FAYING SURFACE OF (2) BEFORE ASSEMBLY.
4. APPLY (36) TO (2) & (7) AFTER ASSEMBLY.
5. IDENTIFY USING DRAWING NO., REVISION LETTER, MANUFACTURERS SYMBOL & SERIAL NO. ON (1) & MATCHING SERIAL NO ON (2) AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ± 7%

(7)	100 IN. LB.
(23)	10.0 IN. LB.
(21) (22) (27) (28) (30)	5.0 IN. LB.
(18) (25) (26)	3.5 IN. LB

7. SOLDER ALL LEADS FROM (3) & (4) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (34). SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR (11), (12) & (13) PER MIL-STD-440 USING (35). WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. (K) HEAT SHRINK SLEEVING ON ITEMS (47) & (48) AFTER ASSEMBLY
9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM HOUSING BEARING (1) OR REMOVE TORQUE MOTOR (4) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (4).
10. MAXIMUM ALLOWABLE TORQUE 15 OZ-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1000006.
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
13. (G) PROTECTIVE CAP, NASA DWG NO 100495, TO BE REMOVED ONLY AS NECESSARY FOR TEST & INSPECTION.

(M) (K) TWISTING TO CONSIST OF THE FOLLOWING TURNS PER INCH

NOTES:

1. INTERPRET DWG IN ACCORDANCE WITH MIL-D-70327.
2. MARK CHARACTERS $\frac{.14}{.10}$ HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF (9) TO BE ALIGNED WITHIN 5° OF -C- ℄ IN DIRECTION OF THE ARROW WHEN (1) & (2) ARE IN THE POSITION SHOWN. APPLY THIN COAT OF (47) TO INSIDE DIA OF (9) AND FAYING SURFACE OF (2) BEFORE ASSEMBLY.
4. APPLY (35) TO (2) & (11) AFTER ASSEMBLY.
5. IDENTIFY USING DWG NO, REV LETTER, MANUFACTURERS SYMBOL & SERIAL NO, ON (1) & MATCHING SERIAL NO. ON (2) AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ±7%
   - (11) 100 IN-LB
   - (23) 10.0 IN-LB
   - (24)(26)(27)(28)(29) 5.0 IN-LB
   - (30)(31) 3.5 IN-LB
7. SOLDER ALL LEADS FROM (4) (5) & (6) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (20). SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR (13) & (14) PER MIL-STD-440 USING (21). WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM.
9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM BEARING HOUSING (1) OR REMOVE TORQUE MOTOR (6) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (6).
10. MAXIMUM ALLOWABLE TORQUE: 15 OZ-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1000008.
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. USE FIGURE EIGHT STITCH LACING IN AREAS INDICATED

NOTES:

1. INTERPRET DWG IN ACCORDANCE WITH MIL-D-70327.
2. MARK CHARACTERS .14/.10 HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF ⑨ TO BE ALIGNED WITHIN 5° OF -C- & IN DIRECTION OF THE ARROW WHEN ① & ② ARE IN THE POSITION SHOWN. APPLY THIN COAT OF ㊼ TO INSIDE DIA OF ⑨ AND FAYING SURFACE OF ② BEFORE ASSEMBLY.
4. APPLY ㉟ TO ② & ⑪ AFTER ASSEMBLY.
5. IDENTIFY USING DWG NO, REV LETTER, MANUFACTURERS SYMBOL & SERIAL NO, ON ① & MATCHING SERIAL NO. ON ② AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ±7%
   - ⑪ 100 IN-LB
   - ㉓ 10.0 IN-LB
   - ㉔ ㉖ ㉗ ㉘ ㉙ 5.0 IN-LB
   - (52) ㉚ ㉛ 3.5 IN-LB
7. Ⓜ SOLDER ALL LEADS FROM ④ ⑤ & ⑥ TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING ⑳. SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR ⑬ & ⑭ PER MIL-STD-440 USING ㉑. WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. ~~TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER IN. MINIMUM.~~
9. CAUTION: DO NOT SEPARATE STUB SHAFT ② FROM BEARING HOUSING ① OR REMOVE TORQUE MOTOR ⑥ WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR ⑥.
10. MAXIMUM ALLOWABLE TORQUE: 15 OZ-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1001508
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. USE FIGURE EIGHT STITCH LACING IN AREAS INDICATED
15. Ⓜ SELECT ITEM (51) TO MEET TORQUE REQUIREMENTS OF ATP 1000008
16. Ⓝ HEAT SHRINK SLEEVING ON ITEMS (53) & (54) AFTER ASSY

NOTES:

1. INTERPRET DWG IN ACCORDANCE WITH MIL-D-70327.
2. MARK CHARACTERS $\frac{.14}{.10}$ HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF (9) TO BE ALIGNED WITHIN 5° OF $\boxed{-C-}$ & IN DIRECTION OF THE ARROW WHEN (1) & (2) ARE IN THE POSITION SHOWN. APPLY THIN COAT OF (47) TO INSIDE DIA OF (9) AND FAYING SURFACE OF (2) BEFORE ASSEMBLY.
4. APPLY (35) TO (2) & (11) AFTER ASSEMBLY.
5. IDENTIFY USING DWG NO, REV LETTER, MANUFACTURERS SYMBOL & SERIAL NO, ON (1) & MATCHING SERIAL NO. ON (2) AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ±7%
   - (11) 100 IN-LB
   - (23) 10.0 IN-LB
   - (24)(26)(27)(28)(29) 5.0 IN-LB
   - (M) (52)(30)(31) 3.5 IN-LB
7. SOLDER ALL LEADS FROM (4) (5) & (6) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (20). SOLDER ALL OTHER LEADS TO EITHER ~~UPPER~~ SECTION OF APPROPRIATE TERMINAL OR (13) & (14) PER MIL-STD-440 USING (21). WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. ~~TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM.~~
9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM BEARING HOUSING (1) OR REMOVE TORQUE MOTOR (6) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (6).
10. MAXIMUM ALLOWABLE TORQUE: 15 OZ-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1001508
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. USE FIGURE EIGHT STITCH LACING IN AREAS INDICATED
15. (M) SELECT ITEM (51) TO MEET TORQUE REQUIREMENTS OF ATP 1000008
16. (N) HEAT SHRINK SLEEVING ON ITEMS (53) & (54) AFTER ASSY

(N)

NOTES:

1. INTERPRET DWG IN ACCORDANCE WITH MIL-D-70327.
2. MARK CHARACTERS $\frac{.14}{.10}$ HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF (9) TO BE ALIGNED WITHIN 5° OF $\boxed{-C-}$ & IN DIRECTION OF THE ARROW WHEN (1) & (2) ARE IN THE POSITION SHOWN. APPLY THIN COAT OF (47) TO INSIDE DIA OF (9) AND FAYING SURFACE OF (2) BEFORE ASSEMBLY.
4. APPLY (35) TO (2) & (11) AFTER ASSEMBLY.
5. IDENTIFY USING DWG NO, REV LETTER, MANUFACTURERS SYMBOL & SERIAL NO, ON (1) & MATCHING SERIAL NO. ON (2) AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ±7%
   - (11) 100 IN-LB
   - (23) 10.0 IN-LB
   - (24)(26)(27)(28)(29) 5.0 IN-LB
   - (52)(30)(31) 3.5 IN-LB
7. (M) SOLDER ALL LEADS FROM (4) (5) & (6) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (20). SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR (13) & (14) PER MIL-STD-440 USING (21). WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. ~~TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM.~~
9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM BEARING HOUSING (1) OR REMOVE TORQUE MOTOR (6) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (6).
10. MAXIMUM ALLOWABLE TORQUE: 15 OZ-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1001508
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. USE FIGURE EIGHT STITCH LACING IN AREAS INDICATED
15. (M) SELECT ITEM (51) TO MEET TORQUE REQUIREMENTS OF ATP 1000008
16. (N) HEAT SHRINK SLEEVING ON ITEMS (53) & (54) AFTER ASSY

NOTES:

1. INTERPRET DWG IN ACCORDANCE WITH MIL-D-70327.
2. MARK CHARACTERS $\frac{14}{10}$ HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF (9) TO BE ALIGNED WITHIN 5° OF [-C-] & IN DIRECTION OF THE ARROW WHEN (1) & (2) ARE IN THE POSITION SHOWN. APPLY THIN COAT OF (47) TO INSIDE DIA OF (9) AND FAYING SURFACE OF (2) BEFORE ASSEMBLY.
4. APPLY (35) TO (2) & (11) AFTER ASSEMBLY.
5. IDENTIFY USING DWG NO, REV LETTER MANUFACTURERS SYMBOL & SERIAL NO, ON (1) & MATCHING SERIAL NO. ON (2) AT THE INDICATED LOCATIONS PER NOTE 2.
6. SCREW TORQUE REQUIREMENTS ±7%
   - (11) 100 IN-LB
   - (23) 10.0 IN-LB
   - (24)(26)(27)(28)(29) 5.0 IN LB
   - (M) (52)(30)(31) 3.5 IN-LB
7. SOLDER ALL LEADS FROM (4) (5) & (6) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL STD-440 USING (20). SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR (13) & (14) PER MIL-STD-440 USING (21). WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. ~~TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM~~
9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM BEARING HOUSING (1) OR REMOVE TORQUE MOTOR (6) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (6).
10. MAXIMUM ALLOWABLE TORQUE 15 OZ-IN.
11. ASSEMBLE & TEST PER THE REQUIREMENTS OF ATP 1001508
12. USE CHICAGO STITCH LACING IN AREAS INDICATED.
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. USE FIGURE EIGHT STITCH LACING IN AREAS INDICATED
15. (M) SELECT ITEM 51 TO MEET TORQUE REQUIREMENTS OF ATP 1000008
16. (N) HEAT SHRINK SLEEVING ON ITEMS (53) & (54) AFTER ASSY

(N) TWISTING TO CONSIST OF THE FOLLOWING NUMBER OF TURNS PER INCH

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS 10/64 HIGH COLOR BLACK PER ND 1002019 AT LOCATION SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF ⑧ TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW SHOWN WHEN ① & ② ARE IN POSITION SHOWN. APPLY THIN COAT OF ㊵ TO INSIDE DIAMETER OF ⑧ AND TO FAYING SURFACE OF ② BEFORE ASSEMBLY
4. APPLY ㉑ TO ② & ⑦ AFTER ASSEMBLY
5. IDENTIFY USING DWG. NO., REVISION LETTER, MANUFACTUERS SYMBOL & SERIAL NO. ON ① & MATCHING SERIAL NO. ON ② AT THE INDICATED LOCATION PER NOTE 2
6. SCREW TORQUE REQUIREMENTS ± 7%

⑦	100 IN-LB
㉒	10 IN-LB
⑪ ⑫ ⑬ ⑱	5 IN-LB
⑰ ㊲	3.5 IN-LB

7. SOLDER ALL LEADS FROM ③ & ④ TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING ⑳. SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL, ㉓, OR ㉔ PER MIL-STD-440 USING ㉗: WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM
9. CAUTION: DO NOT SEPARATE STUB SHAFT ② FROM HSG. BRG. ① OR REMOVE TORQUE MOTOR ④ WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR ④
10. MAXIMUM ALLOWABLE TORQUE 15 OB-IN.
11. ASSEMBLE AND TEST PER THE REQUIREMENTS OF PER ATP 1000010
12. USE CHICAGO STITCH LACING IN AREA INDICATED
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. ALL SPARE LEADS TO BE 3.00 ± .12 LONG & TO TERMINATE NEAR P14/24 AFTER FOLDING BACK ON THEMSELVES. ENDS TO BE INSULATED BEFORE WRAPPING INTO HARNESS

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS 10/64 HIGH COLOR BLACK PER ND 1002019 AT LOCATION SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF (8) TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW SHOWN WHEN (1) & (2) ARE IN POSITION SHOWN. APPLY THIN COAT OF (40) TO INSIDE DIAMETER OF (8) AND TO FAYING SURFACE OF (2) BEFORE ASSEMBLY.
4. APPLY (21) TO (2) & (7) AFTER ASSEMBLY
5. IDENTIFY USING DWG. NO., REVISION LETTER, MANUFACTUERS SYMBOL & SERIAL NO. ON (1) & MATCHING SERIAL NO. ON (2) AT THE INDICATED LOCATION PER NOTE 2
6. SCREW TORQUE REQUIREMENTS ± 7%

(7)	100 IN-LB
(22)	10 IN-LB
(11)(12)(13)(14)	5 IN-LB
(17)(37)	3.5 IN-LB

(J) 7. SOLDER ALL LEADS FROM (3) & (4) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (20). SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR (23) & (24) PER MIL-STD-440 USING (27): WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.
8. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM
9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM HSG. BRG. (1) OR REMOVE TORQUE MOTOR (4) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (4)
10. MAXIMUM ALLOWABLE TORQUE 15 OZ-IN.
11. ASSEMBLE AND TEST PER THE REQUIRMENTS OF PER ATP 1000010
12. USE CHICAGO STITCH LACING IN AREA INDICATED
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. ALL SPARE LEADS TO BE 3.00 ± .12 LONG & TO TERMINATE NEAR (P14/24) AFTER FOLDING BACK ON THEMSELVES. ENDS TO BE INSULATED BEFORE WRAPPING INTO HARNESS
15. USE FIGURE EIGHT STITCH LACING IN AREA INDICATED (J)

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS 10/64 HIGH COLOR BLACK PER ND 1002019 AT LOCATION SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF (8) TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW SHOWN WHEN (1) & (2) ARE IN POSITION SHOWN. APPLY THIN COAT OF (40) TO INSIDE DIAMETER OF (8) AND TO FAYING SURFACE OF (2) BEFORE ASSEMBLY
4. APPLY (21) TO (2) & (7) AFTER ASSEMBLY
5. IDENTIFY USING DWG. NO., REVISION LETTER, MANUFACTUERS SYMBOL & SERIAL NO. ON (1) & MATCHING SERIAL NO. ON (2) AT THE INDICATED LOCATION PER NOTE 2
6. SCREW TORQUE REQUIREMENTS ± 7%

(7)	100 IN-LB
(22)	10 IN-LB
(11) (12) (13) (16)	5 IN-LB
(17) (37)	3.5 IN-LB

Ⓙ 7. SOLDER ALL LEADS FROM (3) & (4) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (20). SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR (23) & (24) PER MIL-STD-440 USING (27): WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.

Ⓛ ~~8. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM~~

9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM HSG. BRG. (1) OR REMOVE TORQUE MOTOR (4) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (4)
10. MAXIMUM ALLOWABLE TORQUE 15 OZ-IN.
11. ASSEMBLE AND TEST PER THE REQUIREMENTS OF PER ATP 1000010
12. USE CHICAGO STITCH LACING IN AREA INDICATED
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. ALL SPARE LEADS TO BE 3.00 ± .12 LONG & TO TERMINATE NEAR P14/24 AFTER FOLDING BACK ON THEMSELVES. ENDS TO BE INSULATED BEFORE WRAPPING INTO HARNESS

Ⓙ 15. USE FIGURE EIGHT STITCH LACING IN AREA INDICATED

Ⓛ 16. HEAT SHRINK SLEEVING ON ITEMS (41) & (42) AFTER ASSY. TWISTING TO CONSIST OF THE FOLLOWING NO. OF TURNS PER INCH MINIMUM

NO. OF LEADS	NO. OF TURNS

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS 10/64 HIGH COLOR BLACK PER ND 1002019 AT LOCATION SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF (8) TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW SHOWN WHEN (1) & (2) ARE IN POSITION SHOWN. APPLY THIN COAT OF (40) TO INSIDE DIAMETER OF (8) AND TO FAYING SURFACE OF (2) BEFORE ASSEMBLY
4. APPLY (21) TO (2) & (7) AFTER ASSEMBLY
5. IDENTIFY USING DWG. NO., REVISION LETTER, MANUFACTUERS SYMBOL & SERIAL NO. ON (1) & MATCHING SERIAL NO. ON (2) AT THE INDICATED LOCATION PER NOTE 2
6. SCREW TORQUE REQUIREMENTS ± 7%

(7)	100 IN-LB
(22)	10 IN-LB
(11) (12) (13) (14)	3 IN-LB
(17) (37)	3.5 IN-LB

(J) 7. SOLDER ALL LEADS FROM (3) & (4) TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING (20). SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR (23) & (24) PER MIL-STD-440 USING (27): WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.

(L) ~~8. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM~~

9. CAUTION: DO NOT SEPARATE STUB SHAFT (2) FROM HSG. BRG. (1) OR REMOVE TORQUE MOTOR (4) WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR (4)
10. MAXIMUM ALLOWABLE TORQUE 15 OZ-IN.
11. ASSEMBLE AND TEST PER THE REQUIRMENTS OF PER ATP 1000010
12. USE CHICAGO STITCH LACING IN AREA INDICATED
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. ALL SPARE LEADS TO BE 3.00 ± .12 LONG & TO TERMINATE NEAR (P14 / 24) AFTER FOLDING BACK ON THEMSELVES. ENDS TO BE INSULATED BEFORE WRAPPING INTO HARNESS

(J) 15. USE FIGURE EIGHT STITCH LACING IN AREA INDICATED

(L) 16. HEAT SHRINK SLEEVING ON ITEMS (41) & (42) AFTER ASSY. TWISTING TO CONSIST OF THE FOLLOWING NO. OF TURNS PER INCH

SHOWN WITH ㉕ REMOVED

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. MARK CHARACTERS 1/16 HIGH COLOR BLACK PER ND 1002019 AT LOCATION SHOWN.
3. ECCENTRICITY MARKS ON BOTH RACES OF ⑧ TO BE ALIGNED WITHIN 5° OF -C- AND IN THE DIRECTION OF THE ARROW SHOWN WHEN ① & ② ARE IN POSITION SHOWN. APPLY THIN COAT OF ㊵ TO INSIDE DIAMETER OF ⑧ AND TO FAYING SURFACE OF ② BEFORE ASSEMBLY
4. APPLY ㉑ TO ② & ⑦ AFTER ASSEMBLY
5. IDENTIFY USING DWG. NO., REVISION LETTER, MANUFACTUERS SYMBOL & SERIAL NO ON ① & MATCHING SERIAL NO. ON ② AT THE INDICATED LOCATION PER NOTE 2
6. SCREW TORQUE REQUIREMENTS ± 7%

⑦	100 IN-LB
㉒	10 IN-LB
⑪ ⑫ ⑬ ⑭	5 IN-LB
⑰ ㊲	35 IN-LB

Ⓙ 7. SOLDER ALL LEADS FROM ③ & ④ TO LOWER SECTION OF APPROPRIATE TERMINAL PER MIL-STD-440 USING ⑳ SOLDER ALL OTHER LEADS TO EITHER UPPER SECTION OF APPROPRIATE TERMINAL OR ㉓ & ㉔ PER MIL-STD-440 USING ㉗: WIRE INSULATION SHALL BE WITHIN .06 OF SOLDERED CONNECTIONS.

Ⓛ ~~8. TWISTED CONDUCTORS TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM~~

9. CAUTION: DO NOT SEPARATE STUB SHAFT ② FROM HSG. BRG ① OR REMOVE TORQUE MOTOR ④ WITHOUT FIRST ASSEMBLING KEEPER TO TORQUE MOTOR ④
10. MAXIMUM ALLOWABLE TORQUE 15 OZ-IN.
11. ASSEMBLE AND TEST PER THE REQUIRMENTS OF PER ATP 1000010
12. USE CHICAGO STITCH LACING IN AREA INDICATED
13. LEADS MUST NOT EXTEND BEYOND THIS RADIUS.
14. ALL SPARE LEADS TO BE 3.00 ± .12 LONG & TO TERMINATE NEAR P14/24 AFTER FOLDING BACK ON THEMSELVES ENDS TO BE INSULATED BEFORE WRAPPING INTO HARNESS Ⓙ
15. USE FIGURE EIGHT STITCH LACING IN AREA INDICATED

Ⓛ 16. HEAT SHRINK SLEEVING ON ITEMS ㊶ & ㊷ AFTER ASSY. TWISTING TO CONSIST OF THE FOLLOWING NO. OF TURNS PER INCH

Ⓜ

NO OF LEADS	NO. OF FULL TURNS MIN	NO OF FULL TURNS MAX

NOTES:

1. INTERPRET DWG IN ACCORDANCE WITH MIL-D-70327.
2. DIAMETERS TO BE CONCENTRIC TO —B— WITHIN .015 TIR UNLESS OTHERWISE SPECIFIED.
3. ASSEMBLY MUST BE SHIPPED AND STORED WITH OA VERTICAL (POSITIVE OA UP) WITHIN 45°
4. THE GYRO, & ALL TERMINALS & WIRES MUST LIE WITHIN VOLUME BOUNDED BY DOTTED LINES.
5. ASSEMBLY MUST CONFORM TO REQUIREMENTS SPECIFIED IN MIT/IL REPORT R-348
6. SLOT TO BE ALIGNED WITH RESPECT TO IA WITHIN ±1 MINUTE OF ARC.
7. IDENTIFY USING DWG NO, SERIAL NO., MANFACTUERS SYMBOL AND AXIS ORIENTATION AT THE INDICATED LOCATION PER MIL-STD-130. (NAMEPLATE PERMISSIBLE)
8. SUPPLIER SHALL CONFORM TO THE QUALITY ASSURANCE PROVISIONS AS CONTAINED IN MIL-Q-9858
9. TEMPERATURE OF ASSEMBLY MUST BE MAINTAINED BETWEEN 40°F AND 160°F DURING SHIPMENT AND STORAGE ASSEMBLY MUST BE RETESTED PER MIT/IL REPORT R-348 IF TEMPERATURE OF ASSEMBLY EXCEEDS THESE LIMITS

NOTES
1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. SOLDER PER MIL-STD-440 USING (6)
3. IDENTIFY USING DWG.NO., REVISION LETTER AND SERIAL NO. OF ITEM (2) AT INDICATED LOCATION USING ITEM (10) PER MIL-STD-130
4. TWISTED CONDUCTORS TO HAVE 4 TURNS PER INCH MINIMUM.
5. SELECT RESISTORS FROM SELECTION CHART
6. LACE CABLE USING ITEM (9)
7. ITEM (10) TO MEET REQUIREMENTS OF MIL-STD-810 METHOD 508
8. ASSEMBLY TO MEET REQUIREMENTS OF ATP 1000013
9. TEMPERATURE OF ASSEMBLY MUST BE MAINTAINED AT 130°F ± 10°F DURING CALIBRATION, SHIPMENT, STORAGE, AND USAGE. ASSEMBLY MUST BE RECALIBRATED IF TEMPERATURE EXCEEDS SPECIFIED LIMITS.
(J) 10. BOND ITEM (31) TO ITEM (3) AT INDICATED LOCATION PER ND1002004
(K) 11. MARK TERMINAL DESIGNATION $\frac{.093}{.073}$ HIGH ON ITEM (31) PER ND1002019
12. PIPA CALIBRATION MODULE, NASA DWG NO. 1007009, TO BE CALIBRATED, SERIALIZED, AND MAINTAINED IN CONJUNCTION WITH THIS ASSEMBLY PER ATP 1000013 (K)

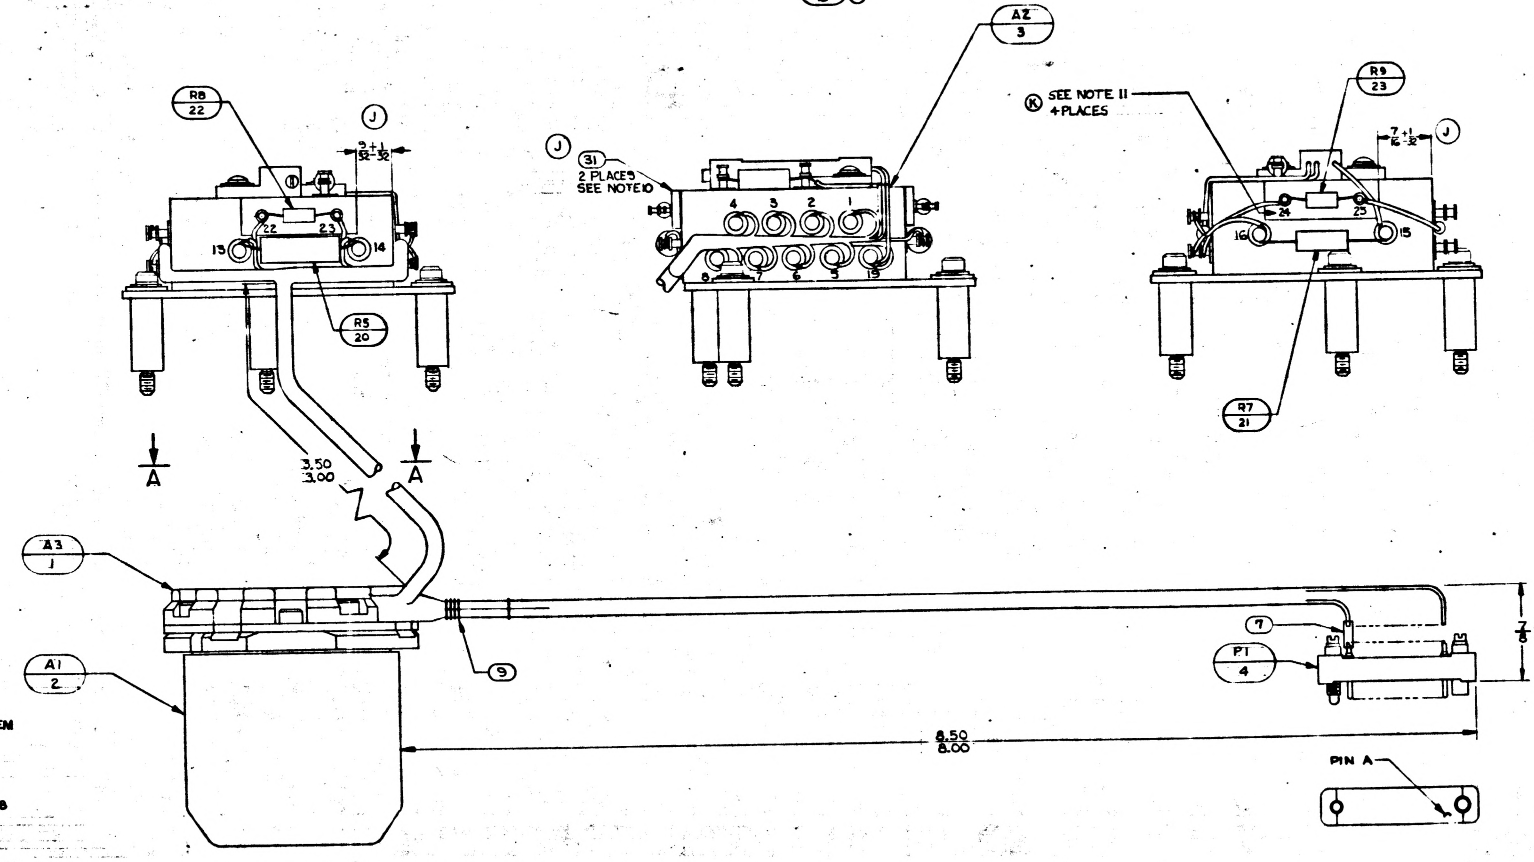
SHIELDED WIRE TERMINATION
CRIMP AS SHOWN
2 PLACES



NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. SOLDER PER MIL-STD-440 USING ⑥
3. IDENTIFY USING DWG.NO., REVISION LETTER AND SERIAL NO. OF ITEM ② AT INDICATED LOCATION USING ITEM ⑩ PER MIL-STD-130
4. TWISTED CONDUCTORS TO HAVE 4 TURNS PER INCH MINIMUM.
5. SELECT RESISTORS FROM SELECTION CHART
6. LACE CABLE USING ITEM ⑨
7. ITEM ⑩ TO MEET REQUIREMENTS OF MIL-STD-810 METHOD 508
8. ASSEMBLY TO MEET REQUIREMENTS OF ATP 1000013
9. TEMPERATURE OF ASSEMBLY MUST BE MAINTAINED AT 130°F ± 10°F DURING CALIBRATION, SHIPMENT, STORAGE, AND USAGE. ASSEMBLY MUST BE RECALIBRATED IF TEMPERATURE EXCEEDS SPECIFIED LIMITS.
10. Ⓙ BOND ITEM ㉛ TO ITEM ③ AT INDICATED LOCATION PER ND1002004
11. Ⓚ MARK TERMINAL DESIGNATION $^{.093}_{.073}$ HIGH ON ITEM ㉛ PER ND1002019
12. Ⓚ PIPA CALIBRATION MODULE, NASA DWG NO. 1007009, TO BE CALIBRATED, SERIALIZED, AND MAINTAINED IN CONJUNCTION WITH THIS ASSEMBLY PER ATP 1000018
13. BOND SCREW TO HOUSING OR ALIGNMENT RING AFTER ALIGNMENT WITH BONDING AGENT PER ND1002004 TYPE II SEMI-RIGID

NOTES
1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. SOLDER PER MIL-STD-440 USING (6)
3. IDENTIFY USING DWG.NO., REVISION LETTER AND SERIAL NO. OF ITEM 2 AT INDICATED LOCATION USING ITEM 10 PER MIL-STD-130
4. TWISTED CONDUCTORS TO HAVE 4 TURNS PER INCH MINIMUM.
5. SELECT RESISTORS FROM SELECTION CHART
6. LACE CABLE USING ITEM 9
7. ITEM 10 TO MEET REQUIREMENTS OF MIL-STD-810 METHOD 508
8. ASSEMBLY TO MEET REQUIREMENTS OF ATP 1000013
9. TEMPERATURE OF ASSEMBLY MUST BE MAINTAINED AT 30°F ±10°F DURING CALIBRATION, SHIPMENT, STORAGE, AND USAGE. ASSEMBLY MUST BE RECALIBRATED IF TEMPERATURE EXCEEDS SPECIFIED LIMITS.
10. BOND ITEM 31 TO ITEM 3 AT INDICATED LOCATION PER ND1002004
11. MARK TERMINAL DESIGNATION .093/.073 HIGH ON ITEM 31 PER ND1002019
12. PIPA CALIBRATION MODULE, NASA DWG NO. 1007009, TO BE CALIBRATED, SERIALIZED, AND MAINTAINED IN CONJUNCTION WITH THIS ASSEMBLY PER ATP 1000013
13. BOND SCREW TO HOUSING OR ALIGNMENT RING AFTER ALIGNMENT WITH BONDING AGENT PER ND1002004 TYPE II SEMI-RIGID

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. SOLDER PER MIL-STD-440 USING ⑥
3. (S) IDENTIFY USING DWG.NO., REVISION LETTER AND SERIAL NO. OF ITEM 2 AT INDICATED LOCATION ~~USING ITEM 10 PER MIL-STD-130~~ PER ND1002019.
4. (S) TWISTED CONDUCTORS ~~TO HAVE 4 TURNS PER INCH MINIMUM~~. SHALL CONFORM TO THE WIRE TESTING CHART.
5. SELECT RESISTORS FROM SELECTION CHART
6. LACE CABLE USING ITEM 9
7. (S) ~~ITEM 10 TO MEET REQUIREMENTS OF MIL-STD-810 METHOD 508~~
8. ASSEMBLY TO MEET REQUIREMENTS OF ATP 1000013
9. TEMPERATURE OF ASSEMBLY MUST BE MAINTAINED AT 130°F ±10°F DURING CALIBRATION, SHIPMENT, STORAGE, AND USAGE. ASSEMBLY MUST BE RECALIBRATED IF TEMPERATURE EXCEEDS SPECIFIED LIMITS.
10. (J) BOND ITEM 31 TO ITEM 3 AT INDICATED LOCATION PER ND1002004
11. (S) (K) MARK TERMINAL DESIGNATION .14/.10 HIGH ON ITEM 3 PER ND1002019.
12. (K) PIPA CALIBRATION MODULE, NASA DWG NO. 1007009, TO BE CALIBRATED, SERIALIZED, AND MAINTAINED IN CONJUNCTION WITH THIS ASSEMBLY PER ATP 1000013
13. BOND SCREW TO HOUSING OR ALIGNMENT RING AFTER ALIGNMENT WITH BONDING AGENT PER ND1002004 TYPE II SEMI-RIGID

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. SOLDER PER MIL-STD-440 USING (6)
3. IDENTIFY USING [illegible], REVISION LETTER, THE MIT/IL PART NO., AND SERIAL NO. OF ITEM ② AT INDICATED LOCATION PER ND1002019.
4. TWIST CONDUCTORS ~~[illegible]~~ SHALL CONFORM TO THE WIRE TESTING CHART.
5. SELECT RESISTORS FROM RESISTOR SELECTION CHART
6. LACE CABLE USING ITEM 9
~~7. ITEM 10 TO MEET REQUIREMENTS OF MIL-STD-810 METHOD 508~~
8. [illegible] REQUIREMENTS OF ATP [illegible]
9. TEMPERATURE OF ASSEMBLY MUST BE MAINTAINED AT 130°F ± 10°F DURING CALIBRATION, SHIPMENT, STORAGE, [illegible] ASSEMBLY MUST BE RECALIBRATED IF TEMPERATURE EXCEEDS SPECIFIED LIMITS.
10. BOND ITEM [illegible] TO ITEM 3 AT INDICATED LOCATION PER ND1002004
11. MARK TERMINAL DESIGNATION .14/.10 HIGH ON ITEM (3) PER ND1002013.
12. PIPA CALIBRATION [illegible], NASA DWG NO. 10[illegible]7009, TO BE CALIBRATED, SERIALIZED AND MAINTAINED IN CONJUNCTION WITH THIS ASSEMBLY PER ATP 1000013
13. BOND SCREW TO HOUSING OR ALIGNMENT RING AFTER ALIGNMENT WITH ADHESIVE, ITEM (34).

NOTES

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
2. SOLDER PER MIL-STD-440 USING ⑥
3. IDENTIFY USING DWG.NO., REVISION LETTER AND SERIAL NO. OF ITEM ② AT INDICATED LOCATION USING ITEM ⑩ PER MIL-STD-130
4. TWISTED CONDUCTORS TO HAVE 4 TURNS PER INCH MINIMUM.
5. SELECT RESISTORS FROM SELECTION CHART
6. LACE CABLE USING ITEM ⑨
7. ITEM ⑩ TO MEET REQUIREMENTS OF MIL-STD-810 METHOD 508
8. ASSEMBLY TO MEET REQUIREMENTS OF ATP 1000013
9. TEMPERATURE OF ASSEMBLY MUST BE MAINTAINED AT 130°F ± 10°F DURING CALIBRATION, SHIPMENT, STORAGE, AND USAGE. ASSEMBLY MUST BE RECALIBRATED IF TEMPERATURE EXCEEDS SPECIFIED LIMITS.
